moutt02@hotmail.com wrote in news:1110485044.128511.202680
@f14g2000cwb.googlegroups.com:

Sorry to hear your problem. According to the following link and quoted
text, it is a common problem, and requires manually re-entering all the
frequencies. (in the absence of a programming device).

"My radio locked up and reloaded completely different memories!
First, some background: Sangean has two versions of the 909. One version
for the US (and Canada?) and another version everywhere else. All 909's
have a mask ROM that is programmed with the radio's firmware, and a set
of station memories for listeners in Europe and Asia.

European and Asian consumers get this model. US-bound radios undergo one
more step before they're shipped: The radio is programmed with a
```

selection of frequencies for listeners in the US, selected by the famous DXer Glenn Hauser.

Unfortunately, under certain conditions, the radio locks up in a mode where it expects to be programmed at the factory, and since no programming is forthcoming, it resets the memories to the original defaults stored in ROM.

According to one Sangean representative, this is a very common tech support issue with the radio, for which a few radios are actually returned for reprogramming.

Barring development of a third-party 909 reprogrammer, you'll have to either reenter your favorite frequencies manually or send it back to Sangean.

More information on the 909's memory system is available."

http://members.verizon.net/~vze20h45/radio/sangean/909tech.html#memloss

(The FAQ author has had his radio lock up on him no less than three times! But the radio still has all the memory presets it was purchased with. So it goes.)

The frequencies reset as follows, only a portion of the text is quoted:

| "Before | After |
|---|---|
| 1.Australa | DW |
| 2.Austria | SWF3 |
| 3.Canada | BR |
| 4.China | DLF" |

http://mysite.verizon.net/vze20h45/radio/sangean/909memory.html#circuit

The intended frequency list is available here: http://tinyurl.com/4s5rb if the link still works. This link is to an HTML rendition of the DX-398 Owners manual available at Radio Shack. At the top of the HTML page is a link to the PDF format if you prefer, or use this link: http://support.radioshack.com/support_electronics/doc66/66340.pdf

Good luck, and with patience you will soon have those frequencies re-entered.

Dr. Artaud

Not to mention the third degree you have to go through with Jacky's in order
to use a credit card.
Order it from Durham Radio and don't worry about someone ripping off your
identity in an Islamic country.

Used a $29.95 radio Shack A.M. Loop antenna..
Worked very well, BTW..

Would " Null Out" stronger stations, leaving the signal you wanted..

There are many obstacles, including the city where the tower is located and
the nearby airport as well as fall zone rules, etc. Best guess a b�mong the
local engineering circle is 12 to 18 months, and the tower will probably
have to be strobed.

>

Just 75 miles from the site, I hear the Cd Juarez and Parral, Mexico,
stations often on top of KFI. There is no such thing as a clear channel any
more.

The hospital got it wrong... and I have several of the Lucite-embedded slices of steel.

In about 1928 or 1929 KDKA built the tower that came down in 1995. It actually fell on the first try, and had to be rebuilt. There was an article, including a cover picture, in an 1929 issue of Radio World. Interestingly, they built a ring of 1/8 wave towers around the big tower with a curtain hung from them to attempt to reduce low angle sky wave. I never saw a report anywhere on whether this worked.

That can be remedied by adding a connecting wire between one of the 'AA'
battery compartment terminals (forgot which one) and the solder pad it
connects to. This will make a permanent connection that doesn't act up.

The earth happens to be (a coincidence) closest to the sun during winter in the northern hemisphere. This means the ionosphere receives the most radiation during daytime which makes it support propagation better, especially the higher frequencies. The opposite happens in the northern summer when the earth is farthest from the sun. This is why summer propagation in the north is not so good in the daytime.

Well I'm surprised by your familiarity with that - that issue's been
solved though.  At least we haven't (yet) pulled a Lockheed Martin &
dumped a weather satellite for lack of bolting it to the rollover
fixture.   And no, I normally do not brag about my employment - though
for this topic mentioning it was in context.  Howver, as someone who
is proud of their Hughes time, I have to say that our satellites still
have the world's best track record.

Seriously, '468' is a significant number when it comes to calculating antenna length.

One good bet is the Navy transmitter at Jim Creek, Washington
(Between Arlington and Darington, north of Everett and Seattle).

It is (or was) 300 kilowatts running on 24.8 kHz, with narrowband RTTY,
so deeply encrypted any software wouldn't have a chance.

I drove up there one time to look at the antenna.  It's a top
loaded vertical in a narrow valley, with antennas supported
by a mountain range.

There is/was another station in Maine.

You know this started out to be a good thread.

This is what I do. I have 8 radios. I take one out at a time and use it for like 2-3 weeks then switch off to another one. I haven't used my R-75 for like 5 weeks so I took it out like 4 days ago. This way it's like having a new radio to play with each time. Believe me you forget the "feel' of the radio after a couple weeks.

Like I haven't used my FRG-7 or FRG-7700 for a while now. But I have a soft spot in my heart for the 150. It's special and I feel great when I take it out. I may fire it up tonight. I like to break it out for the weekend. I hate when I get something nice and get used to it. This way it feels new every time I use it!

Lucky

Really! On Usenet? I thought he'd been gone for several years now. Well, either way, we should refrain from using his name. Repeated use of it can work like an incantation for summoning the minions of Hell...only they'd be easier to get rid of than him.

Of course, they'd also have a better grasp of physics, and would be much better conversationalists.

several things to consider

1) people that have gotten a defective radio from this seller have
complained they never got a replacement. mine is a known working unit

2) you save on the shipping. my shipping is about $5 his is $15

MAKING MONEY I found this on a bulletin board and decided to try it. A
little while back, I was browsing through newsgroups and came across an

article similar to this that said you could make thousands of dollars
within weeks with only an initial investment of $6.00! So I thought,
"Yeah right, this must be a scam", but like most of us, I was curious,

so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. WellGUESS WHAT!!... Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the!! Let me tell you how this works and most importantly, why it works.... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in!

It's easy. It's legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a scam; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the

U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses: #1)Dan Warner 2812
W. 1st. St. Duluth, MN 55806 #2) Karen Green 50 Gillinder Street Rockhampton Qld Australia 4700 #3) Ryan Lake 41130 Congerbay Dr Harrison Twp, MI 48045 #4) Zac Inchley unit 82/ 128 Benowa rd Southport

Qld Australia 4215 #5) Carl Baker 2267 N. Kedzie 1st floor Chicago, Illinois 60647 #6) Jason Otto 600 s. 1st st. Waterford, WI 53185
STEP 2: Now take the #1 name off the list that you see
above, move the other names up (6 becomes 5, 5 becomes 4, etc.) and add

YOUR Name as number 6 on the list. STEP 3: Change anything you need to,

but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more

you post, the more money you make! This is perfectly legal! If you have

any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal laws. Keep

a copy of these steps for yourself and, whenever you need money, you can use it again, and again. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the

notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded

and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches

the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS----------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and

select 'copy' from the edit menu. This will copy the entire letter into

the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in

the Subject, this will be the header that everyone sees as they scroll
through the list of postings in a particular group, click the post
message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different
newsgroups and post away, after you get the hang of it, it will take
about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS
YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A
MINIMUM OF 200** That's it! You will begin receiving money from around
the world within days! You may eventually want to rent a P.O.Box due to

the large amount of mail you will receive. If you wish to stay
anonymous, you can invent a name to use, as long as the postman will
deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT. ** Now the
WHY part: Out of 200 postings, say I receive only 5 replies (a verylow
example). So then I made $5.00 with my name at #6 on the letter. Now,
each of the 5 persons who just sent me $1.00 make the MINIMUM 200
postings, each with my name at #5 and only 5 persons respond to each of

the original 5, that is another $25.00 for me, now those 25 each make
200 MINIMUM posts with my name at #4 and only 5 replies each, I will
bring in an additional $125.00! Now, those 125 persons turn around and
post the MINIMUM 200 with my name at #3 and only receive 5 replies
each, I will make an additional $626.00! OK, now here is the fun part,
each of those 625 persons post a MINIMUM 200 letters with my name at #2

and they each only receive 5 replies, that just made me $3,125.00!!!
Those 3,125 persons will all deliver this message to 200 newsgroups
with my name at #1 and if still 5 persons per 200 newsgroups react I
will receive $15,625,00! With an original investment of only $6.00!
AMAZING! When your name is no longer on the list, you just take the
latest posting in the newsgroups, and send out another $6.00 to names
on the list, putting your name at number 6 again. And start posting
again. The thing to remember is: do you realize that thousands of
people all over the world are joining the internet and reading these
articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00
and see if it really works?? I think so... People have said, "what if
the plan is played out and no one sends you the money? So what! What
are the chances of that happening when there are tons of new honest
users and new honest people who are joining the internet and newsgroups

everyday and are willing to give it a try? Estimates are at 20,000 to
50,000 new users, every day, with thousands of those joining the actual

internet. Remember, play FAIRLY and HONESTLY PLEASE REMEMBER that this
program remains successful because of the honesty and integrity of the
participants and by their carefully adhering to the directions. Look at

it this way. If you are of integrity, the program will continue and the

money that so many others have received will come your way

Yeah, and $10,000 for a ceramic insulator. ;)

DOD will buy anything for 100x its worth. It must be nice to run
Halliburton. Overcharge for everything (including gas) and let little
people from out in the sticks get blown up by the Iraqis while you sit
in an office in Texas and watch your net worth go straight up.

Replacement of the 4569 divider chip cured the problem. The unit is working
well now.

Pete

Since the antenna is physically small it will not be very efficient and
so it appears to be an amplified antenna according to its descriptor.
The amplifier must be in the base. The design is non directional and it
looks like it is supposed to be bolted to some vehicle.

Since I went to the Wellbrook loop, my ANC-4  doesn't seem to cancel
noise as well as it did when I had a long wire and a balun.  I sure
hope the answer isn't another Wellbrook as the noise antenna into the
ANC-4.

< Snip >

Hi trip. I bought this news group years ago to make easy money and it has been a great investment. You see anyone that advertises in the news group owes me $5.00 for each occurrence. When will I see a check from you?

PLEASE NOTE: If you want to keep advertising here I can provide a discount rate on a 1 year contract. If you were to advertise in the news group once a week that would cost you $260 a year. With a one year contract I offer a 50% discount. We are talking just $130 for a one advert a week for a year! You will not find a better price anywhere but you have to act fast as this discount is only good until March 15 so don't delay.

PLEASE NOTE #2: Just in case you get tired of news group owners hitting you up for advertising fees I can show you how buy your own news group. Stop being a renter of posting space and start being an owner. I can show you how to finance the purchase of a Usenet news group and start making money the very first month! With a wide range of prices depending on posting volume I know I can make a deal that's right for you!

Greg

I use

Indoor antenna :   Quantum QX Loop
Outdoor antennas:  Wellbrook K9AY & Wellbrook ALA 1530

I also have a Quantum Phaser that I go with on the 2 outside antennas when I am on a Freq that I want to try for a "new one" .

IMHO the K9AY is the best you can do for a very small space. around a 30 ft square is all that is required. One center support around 26 feet tall. Fiberglass mast.

73, Ken  KG4BIG

Shawn,

There is a lot of enthusiasm about the 1103 and it has a lot going for

it. But I find myself hardly ever using it because of the volume control design.
It has no dedicated volume control. You must engage the volume control button, then adjust the tuning knob to move volume up/down and then wait for the volume control process to stop - only then can you use the tuning knob again for tuning.

To me it is very awkward and takes the fun out of using the radio. I am not a fan of the fake analog display either. Because I find the design frustrating, it gets little use.

I appear to be in the minority as there is a lot of positive feedback on the radio. I think for program listening, where you set the volume and forget it...it would be okay. It's too bad they didn't give it a dedicated volume control. By the way, the 1102 has up/down volume buttons.

I did a review at radiointel.com if you want some more detail.

Russ

Of the loving Israelis:

http://www.ussliberty.org/

"Menachem Begin
He was responsible for the bombing of Jerusalem's King David Hotel, at that time a British administrative and military headquarters, that killed 91 people."

http://en.wikipedia.org/wiki/Menachem_Begin

"Yitzhak Shamir
After Stern was killed by the British in 1942, Shamir escaped from the detention camp and became one of the three leaders of the group in 1943, reforming it as "Lehi". During his tenure, the Lehi was responsible for many deeds, including the 1944 assassination of Britain's minister of state for the Middle East, Lord Moyne, and the 1948 assassination of the United Nations representative in the Middle East, Count Folke Bernadotte."
http://en.wikipedia.org/wiki/Yitzhak_Shamir

Ariel Sharon
"The present Israeli Prime Minister, Ariel Sharon, has long been involved in terror. In 1983, he was found indirectly, but personally, responsible for a civilian massacre by Lebanese militia in two Palestinian refugee camps. At least 800 innocent men, women and children were murdered in cold blood, most of them Palestinians, after Sharon ordered his men to allow the militiamen access to the camps.

....which between 460 and 3500 Palestinian civilians in the refugee camps were killed."
http://en.wikipedia.org/wiki/Ariel_Sharon

For some reason, when U.S. Allies are involved, it's freedom fighting, when anyone else does the same thing, it's terror.

Go Figure.

"Judge not, that ye be not judged.

For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again.

And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?

Or how wilt thou say to thy brother, Let me pull out the mote out of thine eye; and, behold, a beam is in thine own eye?

Thou hypocrite, first cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye.

Matt 7:1-6

Good point on shielding the router. Metals boxes and wire mesh for
ventilation are easy to come by.

If I have gear to near to the computer, I can hear a click every two
seconds or so, which I suspect is due to polling on the router, or
communications between the router and the print server.

I have one of those "zap checkers" which indicates RF is being emitted,
though it does not indicate the frequency of the signal. I've seen RF
on the cat5, but haven't bothered to check the boxes.

When doing AMDX with my Icom R-75, I use the 110' longwire.  More stations, but more noise, too.  The longest distance catches I've made in AMDX have been with the Icom (Cuba, Mexico, etc.)

When using the GE Superadio III, and the "Select-A-Tenna", I get less distance (to split hairs) but quieter reception (ability to rotate antenna and tuner).

Sometimes you feel like a nut, sometimes you don't!

Tony

So for who are these signals intended?

The signal was quite strong, so you are probably correct. When you
don't know exactly how to monitor a signal, it is tough to nail the
frequency exactly. Do you know the mark/space frequencies?

So she says. So based on the Italian reporters story you are fully convinced she is telling the truth and there was no signal given for them to stop. So just what makes a communist reporter's word, who is a journalist for a commie newspaper, more believable than the U.S. soldier's? You stand by your commie reporter, I will stand by the U.S. toops.

Yep, I am sure she is thinking up pleanty more lies in an attempt to cover up her and the Itallian agent's stupidity for not stopping, and attempt to put our troops in as bad a light as possible.

But but but, we're suppose to believe the commie reporter's word over the U.S. troops. At least the idiot mike thinks so. The reporter is lying through her teeth.

She is just attempting to cover up and put the blame on the U.S. troops
for her and the other Italians stupidity. Italian Intellegence
Agent...isn't that one of them epoxy morons?

Yep, and if a tank was involved in the shooting as she claimed, she
wouldn't be alive telling about it either. The commie reporter is
outright lying in an attempt to cover her own stupidity.

And earlier the stupid commie reporter also said that the soldiers did make any signals to stop, there were no lights, yet from your same article, "the Italian magistrate Franco Ionta said Sgrena reported the incident was not at a checkpoint, but rather the shots came from "a patrol that shot as soon as they lit us up with a spotlight."

The stupid Italians can't even keep their stories straight.

Thank You, you are very kind. It's hard to believe how radio has
changed, we had 135 employes at KMPC everyone was a pro....That's the
way Gene Autry operated. rc

It still is a clear channel. However, they have not been able to rebuiled
the fallen tower and are still using the aux, but with hihger power than the
first few hours.

>
> Did they reduce power after putting up a new antenna?

The 1/8 wave antenna was the auxiliary tower, used when the 1/2 wave one was being maintained. There has been no replacement or new tower built.

Why don't you two get a room at the Dinosaur Hideaway?

KFI is not KMPC.  It is a WOAI clone.  It is annoying to listen to.
It is classless.  The only reason they're #1 is the rest of the
audience is too fragmented.

For good sounding News/Talker try 810.

I don't suppose anyone in the Midwest has been able
to pick up some of these?  I know that my Satellit 800 isn't
a DX-ing monster (well, with 50' of long wire farther away
from the house it's now much better, but it ain't no R8 or
IC-R71A), but I'm rather curious about picking up some
of the relays in the evening.

I imagine that tunable loops (frames) should be pretty popular. These can also be used with portables (inductive coupling by sticking the portable right through the antenna frame). Apart from that, something like a Wellbrook active loop (I've been considering getting one but my bank account is still very skeptical [1] ;) should also be very usable. Some hard-core folks with *plenty* of space use beverages, of which you preferably should have 2 so you're not too much restricted direction wise. (A beverage is a fine directional antenna for MW and the lower tropical bands, but its dimensions...)

> If I can find the webpage..there is 1
> company that makes an "outboard" rotating ferrite rod of pretty good
> size.

This also sounds like it may be a viable option. Anyway, directionality (plus some means of changing direction) is usually far more important than pure signal strength on MW. Of course signal strength and sensitivity *are* interesting once you're looking for hard-core DX.

Stephan

[1] When you're young and foolish, you don't think about TCO issues and buy the best receiver you can still reasonably afford and no decenta ntenna. Well, I did buy an ARA-60 at the time, too, but did not have any possibility to put it up outside, so I merely got frustrated with all the interference caught by this omnidirectional thing. *sigh* Well, now there are the Wellbrook loops, but I'm currently having similar trouble with FM BCB antennas since I want something more directional than a mere dipole. *grmbl*

There was some "freebander" activity on 6980 KC USB last night
that was pretty loud up here near Dallas, and in English,
no less.  Some guy talking to his shore-bound sweetheart
about the different vessels in the harbor, plus the fishing.

When are you going to stop being a 'tard boy and get with the program?

I notice you never complain about the 'tards who are daily blowing up their own
people
in Iraq.

Just whose side are you really on Betz?

Some interesting folks are just itching to visit you.

"Surplus stores" may have existed before, but clearly they got a big
boost (or were created) after WWII where there was a shift from a massive
war footing to peacetime.  There was indeed a lot of surplus, ie things
that were no longer needed by the military.  There was a lot of stuff
and it was cheap, for the surplus dealers to grab up and hence for
the customer to guy.

That stuff lasted a long time.  I was able to buy a brand new Command
Set transmitter for ten dollars in 1972, I seem to recall that it was
even in some packaging.

As time progresses, such large wars are a thing of the past.  Yes,
there has been near constant war somewhere, but it is generally handled
by the usual level of equipment.  There are no spikes, where suddenly
massive amounts of equipment need to be bought, and then nobody wants

it afterwards.

So there is much less surplus than there was as a result of WWII ending.

I suspect what there is, is increasingly bought up by other countries (within whatever rules there are about export), to be used by their armed forces.  It's cheaper than buying new, but since it's a necessity they can outbid the surplus dealers that remain.

IN WWII, much of the equipment was pretty generic, give or take some cypher equipment.  A radio receiver was a radio receiver, and a teletype machine was no different from a "civilian" version except maybe it was painted green.

I suspect more and more, military equipment is specialized.  It has the cypher equipment built into the receiver, and that Teletype machine is now a computer, that may be built to certain specifications. Given that, they don't want that stuff to go out on the market, because they don't want everyone to have those capabilities.  Hence I suspect there is much more that will be destroyed rather than put on the market.

Another fact likely rides on all of this.  Surplus was once a relatively big thing.  The stores were small, but I think they tended to be a bigger part of the culture.  The neighborhoods where the stores were have changed, driving up rent prices and the owners have aged or even died.  So no matter what surplus is still available, it's no longer distributed the same way.

Michael

Based on a very few web returns for this company via Google, Parisi Associates appears to be a defense contractor, primarily.  At least one webpage showed a price of around $49,500 for one of their antennas.
The Burlington address seems to be current, although a specific Waltham address also shows up.

The antenna looks like mil surplus; sure looks durable!

Bruce Jensen

I'll risk a "metoo" from SE Canada.  I've been tuning in to Channel
Africa a few times with a few metres of wire hanging out the door.
There was a report on Ghana's recent independence celebrations which was
of special interest to me since my SO (XYL?) did some field research
there a few years back.

The best reception for me was more like 1400 hours, or so.  I don't what
it is, but my daytime reception is fantastic lately.

I used to listen to weather balloons - radiosondes - when they used AM tones on HF. Very eerie series of almost-repeating tones in a strict rhythm, drifting in and out somewhere around the otherwise silent reaches of 26MHz in the middle of the night. Occasionally, you'd get an ionosonde sweeping through.

The balloons are now all on UHF and FM data, so they just go chuff-chuff-chuff. Not the same, not the same at all.

I live on the west coast of the US. I have a DX-398 that is about 6 years old. Recently I changed my "world" time from London to New York, leaving my home time as Los Angeles. The trouble being that after I made the change, I got a completely different station list (I get DW, BBC --D--, RFI, etc.) I would like to know how to set this list back to its factory defaults.

I have tried:

* setting "world" time back to London
* using the "reset" feature
* Taking out the batteries

I would like to know what else I can do.

Thanks in advance for any help you can provide.

Heh heh heh.  I've found myself nodding off in my chair
listening to HCJB in Spanish, or RFI in French, particularly
late in the evening after the kids are in bed.

I see now that Jacky's has it at a considerably lower price:
<http://www.jackys.com/product/product.asp?prod_id=3547&qcatname=Car+Cassette+Player&qcatid=00501>

Shipping from the UAE might add to it a tad, though...

Actually, I think there's more to it.  Take Fair Radio Sales as an example.  I spent an afternoon just wandering around their floor, back room and warehouses.

From talking to them it sounds like they buy stuff in HUGE lots.  The surplus market is dominated by companies that do that now, despite laws trying to make it easier for people -- individuals -- to bid on surplus.

But anyway, once they get that surplus, 1) it's often in terrible shape and may take 3 or 4 radios to produce one marginally workinig one, and 2) there's often classified stuff in there (whether it NEEDS to be classified is irrelevent) that must be destroyed.  And they do. You hear about wonderous radios -- just great radios, no crypto or anything like that -- that end up being run over with bulldozers, because they're classified.

Bureaucracy in action...

Note: when i made the change, I set the radio to display New York time,
I have since set it back to displaying Los Angeles time.  Also,
"Factory Default" in this case refers having frequencies listed by
country (e.g. Austria, Canada, France, etc.)

They lost the licensed tower in an aircraft collision late last year. They are running an existing auxiliary tower in a nonconforming operation at half-power until such time as the half-waver can be rebuilt at the current site or a new site found. The auxiliary tower, which was put into use within a couple of hours of the aircraft tragedy, can not handle full power as it is very short.

Getting permits to rebuild the tower may take many more months. During this time, KFI is running 25 kw. It is not necessary to re-license a station for a bona fide emergency operation.

The tower can not immediately be rebuilt as it qualifies as a totally new structure, subject to today's codes and regulations, not those in effect when the old tower was built in 1947.

A number of area broadcast engineers or engineering departments have "souvenirs" of the old tower. We have a piece of ATU insulation, a shard from the beacon and a piece of an insulator, as well as some paint flakes in both white and orange. .

According to the manual, you can not change the preset shortwave stations stored in your receiver memory.  You can however, store programmed memory into the blank spaces in your memory pages.

If you set your radio to Page 1, position 1, you should see Australia and a freq of 5.995

To do this, hold down the "page" button until the page number on the display begins to flash.  Then use the up and down buttons to move to the page you want.  Once you have the page you want, hit the enter key and your radio will be set to this page and freq.

Example:  Hit SW, HOLD PAGE until page number flashes, use up arrows to move to page 7, then hit enter.  Now the page numbe ris not flashing, so hit the #3 on your touchpad and you will be on a freq of 9745 in the 31m band.

http://support.radioshack.com//support_tutorials/communications/swave-0.htm

The above website can give you more information and a toll free number to call if you have misplaced your DX398 manual.

That minor 'correction' is still regardless of the
facts that Zundel is a neo-nazi Israeli hating scumbag
who incited people like Mcveigh, Nichols and their ilk.
ADV and VoF b'csts were two of the same, period.

Hopefully he will now slowly die in some isolation cell in

Germany now that he's back on his "native soil".

Now wouldn't that be the irony to end all.......?   ; )

----------

ps:  Here's something that will drive the right wing whackjobs completely nuts --> Zundel convicted and M. Jackson walks... (just wait an see)

Yes, I had forgotten the fact that the tower had been toppled a while back.

Wasn't there some question at the time as to whether they could actually rebuild
```

on that same site?

Unfortunately I am no longer able to hear KFI here due to a local on the frequency, though I do have them QSL'd (one of my very few MW QSL's).

I think I will call the local to inquire as to when they might be down for maintenance.

Someone else was on here recommending C Crane products. Was it
Cuhulin? I can't remember now.

If you don't use FM a lot consider replacing the 15 kHz 9 mhz pre filter
FL23 with a 6 khz filter.
This filter is about 2/3 of the way back just left of center on the main
board. It looks like a crystal with 3 legs.
You can get it from ICOM for $18.00 plus shipping.
It is 9M6A1 FL-116 6kHz BW: part number 201 0000 950.
You do have to lift the main board to replace it but it isn't that hard
to do.
Also check out Kiwa (http://www.kiwa.com/) He has a 3.8 khz filter module.
73,
Chuck

My old SONY receiver islooking grungy,
and I'd like to clean the case.

The last time I tried ( on a different radio )
I used Windex, and I smeared lots of the lettering.

What would clean the case, yet not affect
any of the lettering on the case ??

Don't use window cleaner (you learned that!).

If I need to clean anything like that I generally use Fantastik, and have not had a problem.

When KDKA's tower was knocked down in a storm in 1995 they decided to cut it up and sell it as souvenirs. I have a round piece of it, frozen in lucite. The tower dated back to 1920 and was the world's first commercial radio tower. I can't remember how much it cost, but the cost was a donation to the Children's Hospital of Pittsburgh.

Hello RJ,

I keep my radios (as well as all my other elctronic equipment) covered when not in use so they rarely, if ever, need any exterior cleaning. My wife makes the covers. She just LOVES to do that ;-)

That said, I did clean my Hitachi KH-1108S AM/FM/SW portable radio (bought in 1969) a couple of years ago. I used a slightly damp cloth and soap. I was extremely careful and went very slowly. On the serrations of the knobs, I used an old toothbrush and toothpaste. Of course I rinsed off the soap, again with a very slightly damp cloth. None of the lettering (ot anything else) was affected at all.

The radio came out looking like new. The trick is to take your time. Go VERY slowly. Do NOT use "chemical" cleaners other than soap or toothpaste (which, of course, is a soap).

I hope that helps you.

Best,

Joe

RadioLove,
 .
My Sony ICF-2010 'portable' AM/FM/AIR Shortwave Radio
has a Serial Number of 357,363 and these were produced
in the last year or so of production.
 .
I bought my Sony ICF-2010 Radio new-in-the-box from
J&R Electronics in September 2002.
 .
My Sony ICF-2010 Radio is marked "Made in Japan" [.]
And all the Documentation is marked "Made in Japan" [.]
 .
IMHO - The newer (Higher Serial Number) Sony ICF-2010
Radio that you can buy the better change of getting a
Radio in 'good' to "Very Good" over-all Condition.
 .
hope this helps ~ RHF
 .
 .

Toothpaste can dull shiny surfaces and mar
clear plastic windows.
Cigetrette ash does a very good job when mashed
into a fine paste. It can even be used to resurface
CD or DVD disks with pretty bad scratches.
It is about the only good use for cigerettes that I
can think of. When I worked with a bunch of smokers
I gathered several 35mm plastic film canisters of
crushed cigerette ashe. Veryhandy to have around.
Terry

Thanks for the links. Inever pass p a chance to read
about radios. We ar leaving to go pick up the Zenith
ini about 10 minutes. I hope to post a report early
Friday evening about the condition of the radio.
One advantage of working in a shop is access
to good test equipment. I may even have her within
a few days.
Terry

I think the main part of the reason  - not all of it - is this:

There are many reasons we eventually won WWII. The one least discussed or understood is possibly the single most important one:  We OUT-SUPPLIED the Axis to death!  We had, in effect, zero war production on Dec 8, 1941.  In a superhuman effort, we had tied all axis countries combined by late 1943, and in 1944/early 45, we *really* took off. Remember, even the big brass thought we would have to invade mainland Japan to end the war, and that would have been a *massive* undertaking. Supplies were manufactured with that in mind.

Then, suddenly, it was over, and untold millions of tons of rapidly obsolescing equipment was left.  Consider thousands of surplus stores all over the USA, and the governmet "attic" kept them supplied until it all ran out (something like 20 years or more).  By that time, they'd changed the rules, and actual war material production was a fraction of what it was in 1945, and you are left with what passes for "surplus" stores today.

As I said, that's not all of it, but it's a lot of it.

Tony

Almost certainly you have Radio Rebelde, which is the Big Monster on
5025 kHz.

>

Ethernet is actually a number of twisted-pairs.  The most common format is CAT-5E which minimizes most crosstalk (especially near-end variety.)  I think this will almost guarantee some harmonics being radiated.

However, UTP (unshielded twisted pair) cables can radiate *less* than shielded TP cables.  The shield can act as an antenna.  There is industrial stuff wrapped in aluminium that works more like coax or ladder-line.

How much it radiates is based on frequency, and CAT5E is rated to 350MHz, I think.  EMI is actually a problem for these cables.  It is recommended to not run stranded, unshielded UTP cable within 12in of an EMI source.  At any rate, running data through 100baseTx apparently does not have a real noticeable spike in the noise -- the noise is spread out quite a bit.

And it's hard to filter EMI on ethernet.  A ferrite at each connector end will not be as useful as on a 60Hz power line.  Ethernet is something like 1v nicely round waveforms.  I'm not sure there is even a line filter available for the frequencies that 100Base-T is expected to run at.

There are supposed to be filters and/or chokes on specific leads in switches and NICs, but I'm guessing that they may leave a lot to be desired.  This will only minimize noise coupled to the +DC and GND lines from the power supply, I suppose.

The rules of thumb I've read are:

- keep your runs short as possible

- keep your turns no less than 10x the diameter of the cable
- get or make cables with really good connectors.  You don't want any stretched or untwisted ends -- this is where a lot of the noise is.
- kinks crimps or stretch cables will generate a lot more EMI
- If you have a switch or hub of some sort, but it in a metal enclosure

Honus wrote:
> It's Sunday here in Seattle, 0530 UTC and I'm picking up Radio Havana Cuba on a Grundig S350 with a 70' random wire antenna tuned to ~1697 KHz. (The signal drifts a tiny bit, between 1696 to 1698.) I've tried to do my own research and see if perhaps they broadcast on MW as well as SW, but I can't find any indications that they do. They're also frequently mentioning that it's a shortwave broadcast...so through what bit of electronic inadequacies on the part of Grundig am I hearing this on MW? I understand images to a degree, thanks to r.r.s. Is this a related issue? Thanks in advance.
>
>

When your S350 is tuned to 1697.666666666..., the local oscilator is running at 2151.66666666....

RHC on 6000 kHz is mixing with the 2nd harmonic of the local oscillator

(which is at 4303.3333333...)

6000 - 4303.333333... = 1696.6666666...

It's a common problem with cheap portables.

His Royal Highness the Prince of Wales has just visited New Zealand for two days. Yesterday, did some royal monitoring and heard the RNZAF flight carrying Prince Charles into Whenuapai Airbase, Auckland.

Today, more royal listening with lots of police escort traffic on the scanner etc.

And monitored his royal flight from the apron at Auckland International to Nadi, Fiji. Interestingly, as the flight progressed north, the pilot was asked to maintain a listening watch on 121.5 MHz. Rescue Coordination Centre in Wellington were receiving an ELT about 280 nm North of New Zealand's North Cape.

On HF, here's my Royal Log:

08867 kHz "Royal One": Flight carrying Prince Charles from Auckland (01:41 09Mar2005 UTC) USB Selcal was BGCK Secondary freq 13261. (MM)

Yours Royally,

Mark.

Auckland

New Zealand.

So for $485 {$425 for the receiver plus $60}  I have a brand *new radio
with
a warranty, a  bunch of filters I can MIX and match plus *DSP. Throw
those
twin PBT into the picture...and well you get the picture!

Lucky

Hmmm....now I know why they call you "Lucky". So what to you spend the
most time listening to? You HF-150 or your R75?

Steve

If anybody wants to read about KFI, there's a big cover story article
about inside the talk radio biz in the new (April 2005) issue of
Atlantic Monthly, featuring the nightime guy there.

Trivia, KFI originally stood for "Farm Information".

It changed when KFI's main tower was knocked down by an airplane
earlier this year.  The incident was widely reported at the time.

They lost the tower in an aircraft collision. They are running an existing
auxiliary tower in a nonconforming operation until such time as the
half-waver can be rebuilt at the current site or a new site found.

Interesting thing about those Collins filters......................I know that about a year ago, you could buy them direct from Rockwell Filter Products, Costa Mesa, Ca for just under 90 dollars, shipped. Some of the radio manufacturers were selling them for upwards of 120 dollars.

Well yes, but then generally the lower frequencies suffer. Unfortunately, during
the
summer when the lower frequencies actually propagate a bit better we are then
plagued
by thunderstorm static.

Can't win!

Do you have a DSP unit (either built-in or external)?

If so, what percentage of the time to you have it switched on?

Do you use it for AM reception or do you use it only on SSB and other,
more 'specialized' modes?

What's the main thing you like/dislike about your DSP?

Steve

Anyone know the difference between the 2515 and the 2515A?

I wonder who built this rcvr? Trio maybe?

Thanks

KTAR does really well with a 440' tower.  KFI may have to make do with
something similar.

Hmmm...now I wonder what this is.
Could it be a chain letter?
Possibly a pyramid scam?
Maybe it's a get rich quick scheme for those first in line...like
jotto.  And do you suppose it might be illegal in at least one
jurisdiction?

I know the answer...I know...!!!
It's all of the above.

dxace...... who the heck pulled your chain, APPLIANCE OPERATOR? i didnt call YOUR name. are you so important that all conversation has to involve you? heck, my description could of been any one of several POSERS in here! (thats right, its poser not poster!) aaahahahahaha!!!! it is so comical that YOUR ears were burning! and you are SO easy to draw out and manipulate! aaaahahahahaha!!!!!!! i dont even remember how i got along before you came in here! and where did you get the idea that i am a ham anyway? you dumb ass! you just showed that you are just spewing bullshit without any knowledge to back it up! that makes you a POSER, and an APPLIANCE OPERATOR! ........ok, i will admit it.... i WAS talking about YOU! i will take back everything that i said. your radio is nothing special and probably rusty, you arent better.... in fact you seem to be (poorly) compensating for feelings of inadequacy. and your loggings emphasize the AMATEUR in amateur radio! THERE! do you feel better? I KNOW I DO!!! (snicker, snicker!)

I have used a Radio Shack DSP40 for the last 5 years.
It is usefull under bad band conditions and can really
clean up hetrodyne. In the CW mode it allows one
CW singal to be "extracted".
The downside is it  "muffles" decent audio, in fact I get
a headache if I use it too much. Maybe 15 to 30 minutes
max.
I have just traded for a PCR1000 that has the added
internal DSP. It works but not as completly as the DSP40.
But it mangles the audio less and does a fairly good job.
I haven't used the PCR1000 on HF that much, it overloads
very easily. The DSP module does mak eth PCR1000 run
about 20C hotter. Hot enough so I added aslowpeed 12V
muffin fan to cool the case. The fan is congtroled by the
DCT or  CTS, whichever RS232C line the PCR100 asserts
when active. Would I buy a PCR1000 new, or pay the
addtional ~100+$ for the DSP, no way. It was part of a trade
and I plan to use it for local "emergencies", like the winter storm
that is supposed to hit us this evening. I plan on buildng different
frequency list to dump in and use it more as a VHF scanner then

anything else.  Even for this use the PCR1000 is awkward
requiring a PC or palm pilot. I also got a Pro2067 that may be
better suited to my plans.
Terry

I believe that this was a Trio unit. It used one of the Toko ceramic
filter/I.F. transformer combinations in the 455kHz I.F. strip. It wasn't a
bad unit.

McKay Dymek DA-5 BCB ferrite loop antenna.
Modified, like all my equipment, to operate frrom
a common +12V, very quite!, Lamda DC supply.
Works great.
The original power supply does produce some very
low level "hash",  which is almost always covered by
the local RF noise .

I have a 100Base-T hub and I found that by putting ferrite cores on EVERY line, power and data, really quitens things down. The ferrite will stop, or reduce, common mode emmisions which is the main noise source.  The CAT5 cables are twisted and are transmission lines  with differential RF, and don't radiate as much, in that mode, as commonly thought.
I am also a ham, and while I don't transmit very often,
I found that my IC28 would cause the router to lock up.
The ferrite split cores stopped that problem as well.
Terry

The main difference is in the IF strip. The 2515 uses 4 of the filters in the IF while the "A" only uses 2. I believe one stage IF amp stage was dropped in the "A" model as well. Another minor difference is in the RF amp. In the 2515 the bias on gate 2 of the dual gate MOSFET is fixed with a voltage divider, while in the "A" a variable resistor is added into the network, so as to be able to vary the bias over a small range.
I remember using the 2515 as a SWL rx back in the late 60's and finding the 4 IF filters to be too much selectivity for AM broadcasts, and not quite enough for CW/SSB. The "A" model having fewer cans fared better with AM.
Those cans were a mystery as well. I don't think they were Toko products but I don't know for sure. I opened one up once and found what appears to be a ceramic filter disk and an unusual arrangement of coils.

These radio were sold by Allied Radio. I have not been able to determine who actually made them. I once corresponded with a Trio employee who worked there about the time these units were being sold, and he swore they were not one of theirs.

Bob

Those were Toko units................some of the CB radios such as the
Johnson 123 used them. Actually, I've even got a couple of them on hand for
upgrades with radios that use the Toko 10mm transformers.

What a horrid, miserable radio.  I owned one brand new in 1971 as ordered from Allied radio shortly before their demise.

The A-model has a bit more IF bandwidth due to one IF filter stage being eliminated and replaced with a jumper wire on the circuit board.  This spoke volumes of the crappy design:  imagine, the "improved" A-version actually has less parts due to the fact that an entire stage in the IF was removed!

My 2515 model suffered from excessive drift, instability, bandswitch glitching, microphonics, poor sensitivity above 20Megs, scratchy pots.....and that was when the darned thing was NEW!

The A-model may be more desirable due to its selectivity being wider than that of a razor blade.  AM on my 2515 was absolutely miserable and devoid of any detected audio above 1,500cps.  It always sounded like you were listening to a radio with a paper bag over your head.

No wonder Allied fizzled.  This was the Company's last, dying attempt at marketing a house-brand "communications" receiver.  I can see why anyone at TRIO would never admit to desingning the fool thing.

Reminds me of a Lafayette HA-225 (KT-340) receiver I once owned. They
are fine examples of how far shortwave receivers have come!

They could do the 50 kw into the 1/8th wave tower, but it was built as an
auxiliary tower and the ATU will not take 50 kw. Since the metro coverage is
satisfactory with 25 kw, and metro coverage is all they care about, it is
unlikely they will "fix" the small tower until they get the 1/2 wave tower
back in operation. In fact, they had their best book ever after the tower
fell and they were on lower power on a less efficient tower.

I don't think it's unique to Allied.  At that same period, a lot of the old US companies and manufacturers went to solid state and Japan for their receivers.  The art hadn't developed much, and people wanted cheap receivers.  So you got a lot of junk, and in many cases it wasn't made by the company, merely labelled with the company name. I've heard it said that the companies were unable or unwilling to adapt to solid state at the time, so rather than invest the needed research and energy  in solid state design, it was farmed out.

Virtually everyone had a low end solid state receiver at the time of dubious quality.  Something like the Hallicrafters S-38 was pretty bad, but it was built with tubes and at least the designers knew tubes well. It took more effort to make a good solid state receiver, and that wasn't happening at the time, at least not at the low end.

My Hallicrafter's S-120A was horrible.  I suspect that Ameco cheap transistor receiver that tuned to 54MHz was likewise not very good, though that's just a guess based on time an price.  Lafayette, Radio Shack, probably even Heathkit had similar receivers.

Of course, I'm less certain that such equipment killed the companies.  I suspect they were at the end of their long runs, and the fact that things were changing and they didn't change with it helped.

Michael

QST de W1AW
Propagation Forecast Bulletin 10  ARLP010
>From Tad Cook, K7RA
Seattle, WA  March 11, 2005
To all radio amateurs

SB PROP ARL ARLP010
ARLP010 Propagation de K7RA

The sun was quiet this week, but a new chain of sunspots is rotating into a geo-effective position. There were some active days for geomagnetic conditions, most pronounced on March 6-8, and due to a solar wind stream. The average daily planetary A index rose less than 11 points to 20.1, and the average mid latitude A index rose less than 6 points to 12.3. Average daily sunspot numbers were up over 21 points to 36.1, and average daily solar flux rose less than 10 points to 85.9

Rising solar flux and increasing sunspots are expected over the next week. Solar flux should peak around March 15-16 near 115, then drop below 100 around March 20. The most active predicted geomagnetic day in the near term is March 14, but conditions should be merely unsettled, rather than stormy.

Enjoy the next few weeks. The period around the equinox, the change from winter to spring is a good time for HF propagation, even with the sunspot count so low.

With a cry of "Say it isn't so!" Vince Varnas, W7FA of Aloha, Oregon sent an article claiming that the next solar cycle, set to begin in a few years, may turn out to have the weakest maximum of any cycle in the past 100 years. He sent the article as an attachment, but I found it online at, http://solar.uleth.ca/news/05Mar2005/index.php. If that link is troublesome, try a cached version at http://tinyurl.com/4j8cw.

Let's hope the next one, Cycle 24, proves this forecasting method wrong. We don't see many solar cycles in our lifetimes, not to mention our time as amateur radio operators. I was lucky to start early at age 12, 40 years ago this month, and am in my 4th solar cycle. I was just young enough to have missed cycle 19, the grandest of them all, which peaked after the middle of the last century in the late 1950s.

Alex Mendelsohn, AI2Q of Kennebunk, Maine sent in a link to an interesting article from the Air Force Research Laboratory magazine about an all-sky imager that detects solar plasma clouds. You can read it at http://www.afrlhorizons.com/Briefs/Dec04/VS0402.html. Even better, check out Alex's own radio room and some very impressive homebrew projects on his personal web site at http://users.adelphia.net/~alexmm/ai2q.htm.

If you would like to comment or have a tip, email the author at, k7ra@arrl.net.

For more information concerning radio propagation and an explanation of the numbers used in this bulletin see the ARRL Technical Information Service propagation page at, http://www.arrl.org/tis/info/propagation.html.

Sunspot numbers for March 3 through 9 were 24, 13, 22, 22, 43, 52 and 77 with a mean of 36.1. 10.7 cm flux was 77, 78.9, 81.2, 83.6, 87, 93.5 and 99.9, with a mean of 85.9. Estimated planetary A indices were 4, 3, 10, 36, 42, 26 and 20 with a mean of 20.1. Estimated mid-latitude A indices were 2, 1, 8, 17, 28, 17 and 13, with a mean of 12.3.

Going to Netherlands, France, Italy, Germany in early summer. Anyone with recent travel experience? I wld take a portable SW like an ATS606 and wld like to take a pair of FRS radios also. If anyone has had any trouble taking radios with them by plane I'd like to hear about it. Thanks.

He's an antisemite who knowingly spreads false information. Suggesting this is about free speech and debate is like suggesting yelling "fire" in a non-burning theatre is also free speech. There are limits and this criminal has crossed them. Thank God there are a laws about his sort of behavior and that they are occasionally enforced.

Author/source:SW Radio Africa
Fri 11-Mar-2005

We are still being deliberately jammed - which obviously means that we're doing a good job! Please bear with us while we try to overcome this problem. We're now on Plan B.

For the full three hours of evening broadcasts we will be on 3230Khz in the 75 metre band.

For the first hour of evening broadcasts we will also be on 6145Khz in the 49 metre band.

Don't forget the short-wave and medium-wave broadcasts between 5 am and 7 am Zimbabwe time each the morning. These are the frequencies to try:

Medium wave: 1197Khz

Shortwave: 3230Khz in the 75 metre band

And 24 hours a day on www.swradioafrica.com

http://www.zwnews.com/issuefull.cfm?ArticleID=11427

The Norwegian Post and Telecommunications Authority has granted permission to Norwegian amateur radio club stations to operate on eight 5MHz-band spot frequencies from 1 April 2005 until 31 December 2007. The permitted modes are upper sideband and CW, with a maximum transmitter power of 100 watts. The centre frequencies of the channels are: 5280, 5290, 5332, 5348, 5368, 5373, 5400 and 5405kHz, with the upper sideband 'dial frequency' being 1.5kHz lower in each case.

The permission has been granted on a non-interference-basis. Thanks to the NRRL HF Traffic Manager, Tom Segalstad, LA4LN, for this news story.

If you want a good, cheap portable, get the Kaito KA1101 or a DE1101. I
reccomend GPRS radios instead of FRS, the range is better and there's
less dropout because it's digital instead of FM.

Which is EXACTLY why his present, and more importantly
his FUTURE community (grin) *resides* behind concrete
walls, electrically operated doors and 5 Meter tall
electrified fences topped with razorwire.

FYI: Allied made "Knight" tube radios during their heyday in the 1940s.
I believe the company is still around as Allied Signal; I think they
make Autolite brand spark plugs among other car parts.

By 1971 I suspect that most of the old companies were simply names to be
rented out, much like today. Most of the actual manufacturing was done
in Japan, Taiwan and Hong Kong by companies that dared not use their
actual Asian names on their equipment. That's why so many of the
Japanese companies used non Japanese sounding names on their stuff-the
memories of Pearl Harbor were still very fresh at that time, and
Americans didn't want to admit that Japan was kicking their asses on
consumer electronics. I suspect that the main selling point of the name
"Sony" was that is didn't sound like Tokyo Tsushin Kogyo. Same thing
with "Panasonic", which is still made by Matsushita. (Can you imagine
the average American trying to pronounce "Matsushita"? Apparently the

suits in Tokyo saw that coming and used the name National at first, then Panasonic.)

Horrible quality wasn't a detriment when you were talking about a small, four transistor MW only radio, but once SW got popular in the 60s and the Japanese moved into that field the lack of design and quality really became apparent.

On a side note, I heard on World News Tonight that there's virtually NO manufacturing left in America anymore. All the jobs have gone to China. Americans are using debt to prop up their purchase of Chinese stuff. I wonder what will happen when that ends. China and the US need each other-we buy their stuff, and they use our dollars to prop up Bush's spending spree. So basically the two governments are using massive debt to prop each other up, and eventually the whole house of cards will collapse. The Chinese are happy now, but support for the CCP is weak and once the world stops buying their industrial output the commies will REALLY be in trouble.

When I travlel to Europe, I take my Sony ICF-SW55 and but also the Sony AN-LP1 active antenna.  That antenna make a world of difference in a hotel room.  The radio performs much better with the AN-LP1 than on it's own whip.

Somehow, many of you people fail to understand anything that a poster is offering, and some, as myself, are guilty of sometimes reading more into a post than the poster intended.

1. I wouldn't imagine that Americans are thought well of in most areas of the world right now. My comments about not mentioning that he even knows an American were meant facetiously. Nevertheless, my comments had nothing to do with "knowing anyone in the Newsgroup".

2. The link was not provided as an endorsement, merely the result of a simple search to show the radio with a slight discussion about radios suitable for use in Europe, and most importantly, a warning about not using American FRS radios in Europe.

Has Arnie suffered a stroke since his original post, leaving him unable to respond first person? If so, wish him well for me.

Regards.

Dr. Artaud

Steve:
I have two all DSP receivers (RX-320 and RX-350) and I use a Timewave DSP-599zx with my non-dsp receivers.  I also use a software program called SR5 and it works very well.  In addition, Noel Bouchard sells a receiver control program called RXPlus that works on many popular rigs and uses your soundcard DSP for audio processing and decoding of RTTY,FAX, PSK31, etc. This is a terrific program, see : http://www.cam.org/~noelbou/RxPlus/

Sorry, my boredom (it's Friday night here in California, which means nothing on shortwave, which means me surfing the net aimlessly) got the best of me. I was just offering random thoughts. Too random (and too much) for you, apparently, and for that I apologize.

Has anybody noticed that 31m seems to be subject to deep fades that can make program content unintelligible? I've noticed this on BBC 9525 and Radio Havana 9820 but it seems to be the whole band that is affected. Signals will drop below audibilility for a second or three then pop back up for a little while then drop back. It seems that those two stations'

outlets on 49m (5975 and 6000) are unaffected. The fading on 31m seems
to happen almost every day, and seems to be confined to 31m.

I work in the TV elctronics universe, and I had a Sony sales rep tell
me that you are always better off buying a Japanese named product
because their NIST
required certain minimum standards. And I have seen the same VHS VCR
with a Panasonic name tag and RCA and GE that looked the same.
However the inside was very different. The USA versions had fewer parts
and
did not have anywhere near the signal to noise in the video playback.
I think the name of the organizaton was JIS.
Terry

sdaniel13@nyc.rr.com wrote in news:1110548246.416093.8920@l41g2000cwc.googlegroups.com:

Icom R-75, I have the DSP unit that came with the radio, but required the user to install, which I did.

Most of the time the DSP is on, for both AM and SSB reception. I like the suppression of the squeal characteristic of a nearby carrier (when my radio is on SSB).

I have no problems with it at all. Since the Icom R-75 has this feature, it does, under certain circumstances, offer better reception than I am capable of getting with my Yaesu FRG-100. (I still prefer the Yaesu FRG-100 overall).

Dr. Artaud

I looked at the reviews for the 1103, and already owning an 1102, I decided that I would NOT splurge on an 1103. I like the convenience of having a dedicated volume control. It also seems that the performance difference between the 1102 and the 1103 is only minimal at best. The volume control problem, and the fake analog dial that does nothing except shove the display and the buttons to the periphery of the front of the radio, are BIG strikes against the 1103 IMO. Seeing that the two radios are just about the same price on ebay, I'd go for the 1102.

"Pete KE9OA" (p.gianako@worldnet.att.net) writes:

> Those filters were pretty awful................I don't remember the name of the company name, but it started with the letter K. They were used in the NRD-515 and in the Yaesu FRDX-400. They were filled with some sort of foam substance that turns to a sticky jelly after many years, causing the insertion loss of the filter to degrade. Peter Bertini had an article in Popular Communications a few years ago on how to repair them. I did just that for a friend's FRDX-400. You have to dismantle the filter and clean out all of the goo with alcohol..........I used a product called Flux-Off.

Of course, one pays quite a bit for Collins mechanical filters, and that's always been the case.  Those Japanese mechanical filters were significantly cheaper, at least back then.  Reading the old magazines, I've sometimes wondered if at least some times people were calling ceramic filters the wrong thing.

Your description of the insides reminds me that some guy wrote about a homebrew receiver in the early sixties, I think it was in CQ, and he made his own mechanical filter.  No, I don't have it handy and can't specify the issue, but every so often I come across the article, and wonder how practical it was to do.  It seems like we'd have read more about doing it if it was something easily doable.

Michael

I have no advice on the FRS radios. Check with the regs for each country. It will take you until early summer to sort them out.

Take any radio except a Sony unless it is in your carry-on. The ATS 606 should be funky enough to deter its theft. Anything wearing the Sony label is a prime target for the black market.

The French don't hate Americans, just George Bush.

Have fun.

Tom

It was 85 degrees F in Sacramento today. Previous record was 81. Usually
when we get balmy conditions here, you guys back there get pounded with
snow/ice/etc. But don't worry, it's suppoed to be 68 and cloudy by
Monday here, which means that you guys might get a break.

I stopped by Dad's last night and picked up my old radio.
A Zenith 6D512. Like I thought the filters where dry.
the couling and bypass caps checked out perfect. When
Dad's friend re-capped it back then he used "orange drop"
caps. I didn't think they where around that long ago.
We had useable caps in the junk bin, so I fixed it over
lunch, and stayed a extra hour to pull a complete
alignment. The speaker cone has a small crack, that I glued
as a temp fix. But when I fired her up I was able to listen
to the BBC on 5.975. I had forgoten that I added a BFO. Crystal
controled no less. My uncle sent me a "matched" pair of mil
crystals and some house numbered Fairchild transistors, some
perfbord and the other parts. I used a 9V battery, but I think
I can steal power from the cathode in the AF output stage.
I even added a manual RF gain control. Again my uncle gave me
the diagram. He was an Air Force radar tech, who went on to become
a EE. I have ordered "proper" caps, filters and coupling/bypass,
because I don't want to burn up a RF/IF transfomer.
And a bigger shock was the KnightKit Wireless Microphone that
I completly forgoten about. A 12AX7 as a mic and phone amp,
a 50C5 as the RF oscillator/power stage, and a 50C5 as the
AF amp/modulator. I even added a seperte level control for the
phone. You where supossed ton only use a 10' antenna. But I had
much more fun with my ~100' long wire!
My wife says she now understands my interest in cryptography.
After looking at my 40 year old scriblings she says that reading
it is a job best left to the NSA.
But an even bigger shock lay in that old box. I had "air tapes"
of my some of my broadcasts. I took them to work and covertly
dubbed them CD. No way I am going to let my coworkers hear how I
sounded at 14. If I hadn't promised my Mom and wife I would have
bulk earsed then burned the old tapes.  I remember that I borrowed

a friends "Norelco" open reel to reel. 7.5IPS. How professional.
It is almost funny. My voice hadn't dropped yet, so I sounded a lot
like my sister.
The Knight kit is going to require a complete overhaul. My Dad was
much smarter then I knew. He made an isolation transformer for the
hot chasies KnightKit from two back to back 120V:24V 4 amp
transformers.
I didn't understand why, all I knew is he threatened to take my toys
away
if he ever found out I was not using the transformers for the KnightKit
or the Zenith. Damn that man sure was smart 40 years ago.
I am planing on restoring the Knight to it's former glory, but I don't
think I will try a 100' antenna. While I don't use my ham license all
that much, I would hate to loose it.
Terry

I will have fun.  I'm Canadian so no worries in that dept.  Not leaving
until late June, so planning early.  I am looking forward to dial scanning
after long days of museums and cognac and beer etc.

The "RCA" and "GE" names are owned by Thomson, a French owned company, and those VCRs were probably made in China. If the Panasonic was made in Japan, and we're talking about VCRs that were on the market five years ago, then the Japanese product wins every time. But Japan is so expensive and bureaucratic to work in that all the big Japanese names are shifting their manufacturing to China. Some well placed bribes to CCP flunkies and you're in business, no worrisome environmental or labor regulations, pay your workers 10 cents a day and dump toxic waste into drinking water. It's a capitalist's wet dream, which is why everything is now made in China. If you look back over the history of capitalism, you'll see that the ruling class did the same thing to Europe and then the US, with the difference being that the whites fought back, at least for a while.

I have confessed to having American, Mexican, Cuban, Kurdish, Iranian, South African, Australian friends. I also have relatives in the US, Mexico, China, Brazil. Y'know, it doesn't really matter to most people where you're from, as long as you're polite and not arrogant. I'll have a look at the PMR radios.

No stroke here.  Just a busy rest of the day.  Lots of snow today here in
the Great White North.  As far as I can tell Cdn FRS radios are the same as
US models.  I did not take them when I went to Mexico a while back.

Can't say I have my finger on the pulse of world opinion on Americans.  I do
know that the current administration is thought of as suspect, but I have
the impression that's dying down with some time passing.

I have a YB-300, YB-400, ATS-606, ATS-909, and an Icom R-75.  I'm not going
to buy a new radio to take.  I usually travel with the 606, good size, good
reception. The most disposable of these is the YB300, which so far has
survived.

I don't think the CCRA (Cdn Customs and Revenue Agency) can confiscate a
legally imported product.  They haven't the authority. They could charge
ridiculous duties however.  I've appealed against them before and won.

Go buy a radio with synchronous detection like a Drake R8B and those
fading problems go away for the most part.

The radio itself was pretty good................I knew a fellow back in Iowa that had Collins filters installed and he was pretty happy with the result. I was going to match the impedance of the new filters to the '515 but I lost track of him. It is still my favorite of the JRCs.

You will be able to recognize if it happens if you start experiencing
reduced sensitivity in the SSB modes. Not a big deal to clean and repack the
filters. About an hour and a half for both the LSB and USB filters.

Come to think of it...........I wonder if it depends on the user
environment..........I just don't know.

My all-time favorite is to find a spot on the dial that sounds as though
there is a faraway talk station that's just too weak to receive intelligible
speech from. Speech-like patterns, but no discernible speech.

I am not sure how hard they would be to make. I've got an old article that Mr. Johnson of Rockwell Filter Products forwarded to one of the engineers at Rockwell-Collins. There was a note included with the document saying "after you read this, you will be an expert on Mechanical Filters". I have to dig that up one of these days.
I remember the Motorola Permakay filter units that were in the Mocom 70 radios. I dismantled one the filter assemblies one day and found 14 individual ceramic filter elements, with an amplifier embedded in the bundle. They were pretty decent units.
There were some pretty cool articles in those old magazines. I remember an old in Ham Radio........the project was kind of a spectrum analyzer for the FM broadcast band using a Bragg Cell Detector. After seeing that article, I became a homebrewer.

Fantastik took the wood grain off the "contact" paper on my humidifier,
and removed some silk screening off one item a while back. I believe 409
didn't affect either of those two items, but did affect others. Since
I've been using Simple Green I haven't hurt anything... YET. Rule of
thumb is always to find a small area where testing won't kill anything
too badly.

(I always thought Simple Green was some idiot environmentalist crap made
of water and fish piss, good for nature but not for cleaning, because of
the name. Since I've tried it, I've found it to work better than nearly
anything else for general cleaning.)

Steve,

I use the DSP whenever there is too much garbage on the frequency or band
like static, scratchiness, some solar bullshit, etc, in any mode. It really
helps with Hams and SSB but works well with AM too  {at least the Icom

unit}.

I use it pretty often. Like one fellow buff said you can't have too many tools to help hear signals better. The human ear can really differentiate subtle changes and it makes listening more pleasant and less stressful all around.

What I don't like about it is too much DSP can distort sound and take some fidelity away,

But, you can live without it. I mean it's not like it's so fantastic it's gonna change your life, but it helps :)

Lucky

It's my understanding that there is a factory down south somewhere. No doubt working overtime.

Yes, apparently the Antigua site is being either downgraded or mothballed. Services are to be switching from there to Fr. Guiana, Bonaire, and other sites apparently where there is excess transmitter capacity.

Most of that stuff runs by large generators, so fuel is indeed a concern.

Definitely. You won't go to jail as someone else suggested but you could get the radios confiscated.

> I
> would definitely check into that before going. You may wish to buy
> European compatible two ways online or if you can't do that buy them
> when you get to the Continent.

Buy them when you get over here (I'm in the UK btw). They run on 446MHz and cost (US)$37 a pair up, more if you want drop-in chargers, and are available everywhere.

DW also used to broadcast via Montserrat, however that transmitter location was destroyed by a volcanic eruption a number of years ago (1995).

Has anyone actually asked him if he has the radio? According to Universal the
radio is to
be released in mid-2005.

How did this fellow get one?

Voyager probes in funding crisis

Nasa's twin Voyager probes may have to close down in October to save money, the US space agency has said.

Launched in 1977, Voyagers One and Two are now more than 14 billion and 11 billion km from Earth, respectively.

They are on their final mission to locate the boundary between the Sun's domain and interstellar space.

But the agency's Earth-Sun System division has had to cut its budget for next year from $74m to $53m, meaning that some projects will be abandoned.

Although the Voyager probes are thought to have another 15 years of life left in them, they are very expensive to run, costing Nasa about $4.2m a year for operations and data analysis.

Other missions like Ulysses, which was launched in 1990 to explore the Sun's polar regions, might also have to be abandoned after the end of the fiscal year in October.

Although the decision is not yet final, some Nasa scientists are preparing themselves for the worst. Voyager project scientist Edward Stone of the California Institute of Technology told Nature magazine: "We are currently developing a plan for shutdown."

I'm not American and not travelling to or from there, but the list probably
applies anywhere.  It isn't so much the travel as I wonder about the
countries in Europe and particularly if FRS is okay there.

Those filters were pretty awful................I don't remember the name of the company name, but it started with the letter K.

They were used in the NRD-515 and in the Yaesu FRDX-400. They were filled with some sort of foam substance that turns to a sticky jelly after many years, causing the insertion loss of the filter to degrade. Peter Bertini had an article in Popular Communications a few years ago on how to repair them. I did just that for a friend's FRDX-400. You have to dismantle the filter and clean out all of the goo with alcohol..........I used a product called Flux-Off.

Afterwards, you have to replace the foam damping material. I used air conditioner foam strip. Another thing about those filters....there is no other mechanical support for the filter elements themselves. When you remove the goo, you have the filter structure hanging by a few strands of Litz wire. For years, I was looking for an NRD-515 until I discovered those filter problems. I have never seen a Collins mechanical filter fail in that manner, and I have had quite a few of those filters over the years. If any of you ever have the problem with your JRC radios that use that filter, I can give you advice on how to repair them....................if you don't feel comfortable repairing them yourself, I can repair them for you.

I did have one of those 2515 in for repair a couple of years ago, and the unit that I repaired did not have any mechanical filters even though the advertising hype stated that it did. It was definitely one of those slightly oblong I.F. transformers that had the ceramic filter inside the same structure.

For a cheap receiver, they weren't bad.

Anybody remember the transceiver that matched this unit in style? A friend once told me that it was a Kenwood TS-510 with Allied's label.

Pete

Interesting.  Of course, the routers and NICs are supposed to use RF
chokes on the +VDC and GND lines to suppress common-mode EMI.  If this
leaves some room to be desired (there are no real rules governing how
much RF choking should be done), and you are really using CAT5 (i.e.,

not CAT5E) rated cable and ends, this might explain the interference you were picking up.

The ferrite beads will not stop the EMI at the frequencies that data is running down the wire at.  As you say, the twisted pairs wouldn't radiate much.

Common-mode will still be a problem, and ferrite should choke that out.

CAT5 (not CAT5E) has much lesser near-end x-talk protection, and I recall that it can emit EMI spikes at specific frequencies. This might be what you are hearing. CAT5E does not have this problem, I understand.

See if the cable and routers are rated CAT5E. It might be worth the expense to try it out on one data line to see if the noise is minimized. Heck, it might be worth it to pull most of the cables and see if the router makes similar noise. The noise may not be network traffic related. Or power down the router but leave the nodes connected.

Also, another reply to this thread mentions that ferrite material did choke out common-mode RF. It may help, especially if the router has less than stellar RF choking on it's ethernet +VDC and GND lines.

If the router is the noisiest part, then my advice about making sure the connectors are all in good shape still holds. I bet you could snap a ferrite bead on the power supply/wall wart powering the router, too.

I'm still pretty sure that the twisted-pair lengths themselves are minimal EMI radiators (or the radiation falls off sharply over distance), but the ends can still radiate quite a bit, and common-mode EMI is always a problem. Like most things radio all this is half-science and half-magic. If it works for you, then it works!

I'm hearing it at 2216 on 6925 in Austin, TX. Some dude keeps saying
"This is Jack Black, WKIL, Killer Radio" or something like that. Signal
was an s9 but starting to fade.

Yeah, I caught what seemed to be the Jack Black part... can't tell whether it's WKIM, WKIN or WKIL...

Got some freaky snow squalls moving through here with some apparent lightening as well.

Yep... WKIL ID at 2224.... "Kill all the mother f**kers"

Well, I finally got in my new receiver.  I just couldn't resist full computer control, figuring it would be the most accessible since I'm blind and good with computers.

I've only had it for about a day, but I'm fairly happy with it so far. The band is not all that good, but it seems to be working fairly well. I was quite surprised to get more buttons on the screen (at least things my speech can see) with a higher screen resolution.  I couldn't have imagined this kind of access when I was really into shortwave 20 years ago.

Only problem I've noticed is that the receiver was just slightly out

of adjustment, it was about 60hz off.  Nice thing is that with the
software I fixed it in a matter of minutes by tuning in wwv and trying
adjustments until I got it spot on.  This is the first radio I've ever
had with usb and lsb, instead of just a bfo switch.  That combined
with decent filters does definitely help.

Sad to hear that Flanders Today will be gone at the end of the month
on RBI (11.730 booming in here).

Somebody needs to come up with a webpage or program to put all the
international programs in one place, I don't find that sort of
listening to be at all easy.

```

There is no excuse for a penny pinching move like that in an expensive
radio.  My opinion of Japan Radio just went down a couple of notches.

Computer-controlled receivers look very interesting.  Unfortunately, I
use Mac most of the time.

[...]
> Sad to hear that Flanders Today will be gone at the end of the month

Me too.  RVI is my first ever QSL.  11730 really comes in strong for me
with a little wire hanging out the door.  I was hooked on the first
listening, right up to where they said they were going away.

> Somebody needs to come up with a webpage or program to put all the
> international programs in one place, I don't find that sort of
> listening to be at all easy.

Right.  A page that can be properly read by a screen-reader.  This is
the big advantage of using standards-compliant content with style-sheets.

I'm guessing you'd like an electronic, searchable version of the
Passport to Worldband's "English-language broadcasts" pages?

It's easy to do this.  The hard part is keeping it up-to-date.  Well, I
guess the data entry would be a pain, too.

I've though of a similar type of system, with the added bonus of being
able to rate or tag entries so I can get a result set that answers the
question, "what English language broadcast are on right now that I think
would be coming in nicely at this hour where I am?"

At 2251 its still  s8 - s9 here in Austin with little QRN or no QRM and
the guy definitely says WKIL with either a some cheap effects on his voice
or re-playing his voice slowed down a bit. Cool music though.

Heard with Yaesu FRG-7 and a 75' wire with a tuner.

At 22:49Z I have a strong, S9 and steady, AM
carrier, with farily low modulaiton. But there is

a lot of static that sounds like lightening.
Lightening in March?
Located just south of Lexington KY.
Music being played is blues and it sounds like BB King.
Terry

I think it is a scam, but probably no more of a scam than when you
purchase a new one from Eton for $500.

Just heard an ID at 23:00Z, WKIL .
Sounds like a black dude.
Please no flames, I am not being a
racist, just discriptive.
Terry

If you are in the market to buy some hardware-based DSP, you may consider downloading one of the free software-based DSP programs to experience what it can do. Google "SR5-DSP" and try that. There are others out there as

well...

Good luck with it!

-=jd=-

I've read about various software-based DSP programs and some of them look really interesting. However, I don't care to have my receiver connected to a computer. I did operate this way for a while and I appreciate the advantages, but on the whole I don't care for it.

I use one of the ClearSpeech units and am very happy with it, but I've noticed that some people are much happier with DSP than others. I'm curious about whether this is because DSP is just better adapted to certain kinds of listening or whether it's entirely a matter of personal preference. Anyway, my curiosity about this is one of the things that motivated me to start this thread.

Hearing a pirate on 6955 at 2321.

WKIL apparently pulled the plug on 6925 at 2320.

Have a friend that bought one....not much of a radio according to him....He
says ...NOT worth 500$ ....Equals a YB-400 LOL!

I think he is gonna unload his on ebay soon too.

Notice how you CANT pick that one up?  ship only no pick ups!  Buyer Beware!

Would be tough to get your money if he dont have the radio when you go to
pick it up in person now would it!

China & N. Korea launch harsh crackdowns

China arrests more than 800,000 people for endangering state security

�State Security� arrests top 800,000 in 2004, and show no signs of slowing down: The number of people arrested by the Communists for �endangering state security� (Asia News) � the cadres� catch-all crime for doing anything of which they do not approve � was 811,102 last year.

http://www.asianews.it/view.php?l=en&art=2731

2005 is promising to be another busy year for the brutal dictatorship � over 2,000 �appellants,� i.e., petitioners bringing their grievances against local cadres back home to Beijing � have been arrested

Since convening China�s top advisory board, the National Committee of Chinese People�s Political Consultative Conference on March 3, the police presence on the streets of Beijing has multiplied, with police vehicles running in every direction.

The amount of public security this year is staggering, and seems to suggest a growing fear coming from the Chinese government. Preceding the two conferences, police, public security, national security, armed police, plainclothes police and urban riot police filled the main streets and small alleys of Beijing, overflowing into the surrounding areas. Many of the police are from provinces, cities and autonomous regions sent to �defend the two conferences.� The government is using more than 600,000 state personnel to �protect� the several thousand officials attending the conferences.

How much are Kaito radios,about forty or fifty dollars? That would probally be a good radio to take to Europe or wherever with you.Chances are that if you have something nice and expensive in your luggage at the airport(s) the item or items might get stolen by some crooked baggage handlers.If you take a nice expensive radio with you it probally would be best to hang on to it with your hands at all times.Don't let it out of your sight no more than you would with a wristwatch or jewelry that cost hundreds or thousands of dollars.

"Li Changchun" <LiChangchun@ccp.gov.cn> wrote in
news:1134bpq5pbda35b@corp.supernews.com:

Nowhere is my post endorsing Islamic States. You have engaged in the same subterfuge so common to someone incapable of addressing the facts, i.e. say something irrelevant to the point.

Did you peruse the information at the listed links, or merely judge them as untrue as they don't support your view on life? Wrong is wrong, regardless of who perpetrates it. The Israelis were wrong in the cited examples. The Arabs are wrong in the continuing acts of terrorism.

Nothing is going to change in world politics if we continue to focus on specific groups and exonerate other groups of the same crimes. Have you ever watched movies (I'm sure that you have). At least the movies produced in America have stereotypical villains. Republicans, Germans, Christians, Arabs, and Caucasians. That's about the extent. Movie after movie inculcating the public that people from these groups are not to be trusted.

All men are stupid, all women are single (or single mothers),and all Arabs are crazy machinegun toting maniacs. How is this going to help anything?

And you, I see that you are with the "Chinese Communist Party". How exactly do you enter the fray of the discussion? History has rightly condemned the acts of the Nazis during WWII, but has been stifled on the cases that I cited. People should have free access to the facts and be able to come to their own conclusions, not have them forced on them by politically correct mores.

Regards

Dr. Artaud

P.S., are you involved in shortwave and are you from China? (This may be self evident to others on the group, pardon me if this is something that I should have noticed from other posts). Do you know the times in UTC and frequencies for English Language shows from China?

@g14g2000cwa.googlegroups.com:

Assuming that your post is not facetious, a little etymology is in order. Neo, used as a prefix, means "New". Thus, when you discover that your contact lens fits too tight, and you have been careless for too long, your cornea will develop Neo-vascularization. This means new vascular growth in the cornea. (considering that you shouldn't have any vascularization in your cornea, this isn't good news).

From the online dictionary:

"Main Entry: ne-
Variant(s): or neo-
Function: combining form
Etymology: Greek, from neos new -- more at NEW
1 a : new : recent <Neogene> b : new and different period or form of <Neoplatonism> : in a new and different form or manner <Neoplatonic> c : New World <Neotropical> d : new and abnormal <neoplasm>

Oddly enough, look at the meaning of the word Vascularization:

http://www.m-w.com/cgi-bin/dictionary?book=Dictionary&va=vascularization&x=9&y=14

"Main Entry: vas�cu�lar�i�za�tion
Pronunciation: "vas-ky&-l&-r&-'zA-sh&n
Function: noun
: the process of becoming vascular; also : abnormal or excessive formation of blood vessels (as in the retina or on the cornea)"

What a coincidence, I didn't plan the juxtaposition of the two words, it just worked out that way.

Go Figure.

Anyway, if your post was facetious, oh well. Perhaps others can learn. (The true meaning behind Neo).

Regards

Dr. Artaud

Hmm, never heard this before about the 515 filters. My almost 25 year
old 515 works great, just needs a little alignment in the PBT circuit.
A friend's 20 year old one is fine and dandy too..

Ah, I see that you do post. Sorry for the confusion.

I look at a specific number of posts, either by poster or subject, and I have not remembered your posts.

Excellent article on Propaganda at Wikipedia, the free encyclopedia. Coincidentally, it has a North Korean Poster at the top of the page.

http://en.wikipedia.org/wiki/Propaganda  Can you tell us what it says?

Regretfully, my understanding of non-English languages is nil, I mean no offense by my request, I am just curious if you can read it.

TSA (US airport security) checkers are poorly trained and vetted and regularly help themselves to items in passengers' bags. Since Arnie is a Canadian and he's going to Europe, he won't have to worry about the TSA, but I don't know anything about security in Europe. Some countries are probably better than others. Most Degen (Kaito) radios are $50 or so when bought from Liypn over ebay, but I read on this group that Canadian customs are confiscating all Degens sent from HK to Canada because Kaito Canada complained that they were being undercut by Liypn. Still, at Kaito's price ($100 in the US, probably a little more up north) it's a radio that you don't have to fret over being grabbed by your friendly local screener. I've heard that Sony products of all kinds are regularly grabbed by TSA screeners, but most of them probably aren't smart enough to have heard of Kaito, much less Degen. Other inexpensive Chinese radios are a good bet to survive security. Arnie might try a Tecsun bought over ebay, they don't have the same import restrictions and are just about as expensive as Degen brand radios.

Kinda depends on how you define radio station.

Lee de Forrest claims to have been broadcasting on a regular basis in 1907 from laboratory in Parker Building in New York.

In 1909 Charles Herrold transmits voice from San Jose. By 1912 he was maintaing a regular scheduled broadcast. In 1916 he was assigned the call 6XE which was changed to KQW in 1921 later to become KCBS.

1910 - De Forest makes a broadcast directly to the public from the Metropolitian Opera to listners in NY using a 500 watt transmitter.

1912. 9YV (WTG) Manhattan KS broadcasts weather information in Morse code daily at 9 a.m., believed to be first regular schedule of weather broadcasts in U. S.

1920 - 8MK (WBL, WWJ) begins formal period of testing (but Archer in History of Radio to 1926 says 8MK Radio News & Music Co. first appears in RSB 6/30/21; 8CS owned by an employee of the Detroit News first in RSB 6/30/21)

October of 1920 Westinghouse, Pittsburg, PA, obtains the call letters KDKA and broadcast the presidential elections on the night of November 2. Some historians want to make this the first commercial broadcasting station and the beginning of commercial broadcasting to the public, but that is up for debate.

The above is just a sampling of radio broadcasing go on in the early 1900's. You might find the following an interesting read.

Arnie's a Canadian, and I don't think that talking with people on a usenet group counts as "knowing" them. As for two way radios, it would probably be easier for Arnie to buy PMR radios when he gets to Europe than to buy them online from a European dealer.

The cheapest SW radios you can find are on ebay. If you have $50 invested in a radio, you won't worry about security helping themselves to it. Try buying a Tecsun radio, Degens can't be sold to Canadian customers online because of import restrictions on the part of the Canadian government. Keep batteries in the radio, keep it in carry on luggage (many of the Tecsuns are small enough to put in your carry on bag) and be ready to turn it on and demonstrate that it works to get past security. Artaud says that FRS radios are illegal in Europe, I would definitely check into that before going. You may wish to buy European compatible two ways online or if you can't do that buy them when you get to the Continent.

Heard an announcement about BBC changes as of March 27 just prior to the 1400 news.

http://www.bbc.co.uk/worldservice/schedules/frequencies/index.shtml

Apparently English, Arabic, Spanish and Portuguese for South America will be reduced, if not more. I've not had time yet to peruse everything.

Actually I think I've used the 'poseur gag' long before you showed up on the
scene, 'tard.

Tote it!

Bush will not finance any science project that conflicts with the
Bible.

In other words, the probes might accidently run over God, while he
masturbates in some dark corner of Heaven.

Just where do you masturbate, 'tard boy?

Have mommy help you with your morning meds.

Hearing what appears to be the clandestine Voice of Democratic Eritrea on 12015 (based upon the music) at 1500 s/on. RTTY QRM.

Transmitter is located at Julich, Germany.

Scheduled on Saturdays from 1500-1530.

I was looking for the Voice of Mongolia, also scheduled at the same time.

I'm thinking of getting into shortwave radio (listening to it, at least), but I've heard a lot about satellite radio, the internet, and problems with power lines making shortwave a moot point. What's the future of shortwave radio? Will it stick around in its current form? Is it worth it to even buy a set, or am I better off just listening online?

Thanks!

We both bought them around the same time. Mine was made in Nov 81, his
in 85, one of the last ones made. His was new, mine was used. Mine has
two of the K filters in it, I can't remember what the name is either. It
also has a crystal 1.2 K and a ceramic 300hz filter.

I checked it last night, and clicked through the bandwiths and the
signal strength was the same in all modes, except the 300hz one, it
always reads a little lower with that one selected.

My friend's is ok too. Both have spent the last 20 or so years in air
conditioned houses, maybe that's it. I had a ton of problems with those
5 cent phono plug interconnects over the years. De-oxit took that
problem away.

While I have a PCR-1000, it does not have the DSP filter. However I have not purchased one because the reports of it's usefulness vary widely. It's kinda like Keiths's India Pale Ale, those who like it, like it a lot !! :)

So I use a software based sound card one. While I have tried many, the one I keep coming back to is called the BR-Universal-Filter. It has the usual bank of features and seems to do a good job for me. I only use it when interference makes it necessary. It has a DSP off feature and 5 customizable programmable settings, so I usually have the program running in DSP Off mode until I need it.

You can find a copy of it here:

shareware.pcmag.com/product.php%5Bid%5D75206%5Bcid%5D201%5BSiteID%5Dpcmag

Hope it helps

Most likely it has to do with conditions, most bands are not doing good right now since we are at the bottom of the sunspot cycle, as a ham working HF I can tell you that the lower bands like 80m and 160m dont seem to suffer that much but from 40m and up the signals are showing lots of flutter and fading.

CBC's Promo Girl : video interview
http://www.cbc.ca/canadanowns/

http://www.cbc.ca/canadanowns/media/20050304ns_promo_girl.ram
If you are a CBC Radio listener, you know all about Promo Girl, the
mysterious voice that tells listeners what's coming up throughout the day.
Promo Girl's identity has been a closely guarded secret. But not anymore.
Promo Girl has been outed and it turns out she is from Antigonish. Canada

Now host Norma Lee MacLeod speaks with Promo Girl, also known as Shauna MacDonald. (runs 3:16)

That is why I am in the Hispanic sector and in Latin America. Recently did a project with a news-talk in Argentina, where the morning news and information show has 47 staffers... including a staff comedian who does hourly parodies!

In the US, nearly all Hispanic stations are live and local, know that community service actually gets ratings, and where radio is still a profession.

I recall visiting KSFO in about 1961 as a teen and remembering that it was filled with courteous people who actually thought it was significant that a 13-year-old would visit them. today, stations have to have metal detectors to keep criminals out!

I look forward to more of your postings here.

>
> KFI is not KMPC.  It is a WOAI clone.  It is annoying to listen to.
> It is classless.  The only reason they're #1 is the rest of the
> audience is too fragmented.

```
And news talk is NOT fragmented? 570, 710, 640, 790, 830, 870, 980, 1070,
1020, 99.5, KLSX, 1330, 1150 and 1540 are all talk stations in some form.
That is 14 stations in that format. That KFI has nearly a 5 share shows they
are focusing on what the market wants.
>
> For good sounding News/Talker try 810.

KGO is great... for San Francisco. KFI is a good news source, has a
significant quotient of local talent, like Handel, and is beautifully imaged
and produced by Robin. It is as good as they come, especially in the local
news coverage.

> Thanks!

Setting concerns about BPL to one side, shortwave isn't going anywhere. Why would it? It's not like there's only room enough for a single medium of information in the world. When satellite radio and the internet lead to the closing of all newspapers, movie theaters, conventional FM and MW station, publishing houses, etc., then start to worry. But that's never going to happen.

It might turn out that shortwave isn't as commercially viable as some other media. This, in fact, is how I *hope* things play out. Granted, it will result it more major broadcasters moving to other media, but it will thereby clear up a lot of bandwidth for smaller broadcasters, much more interesting content, and awesome DX opportunities.

So, you have more reason to buy a shortwave radio now than you ever did before.

Steve

PS: Oh, and I'd be willing to wager that, ten years from now (if not five years from now), we'll all be straining to remember exactly what "DRM" was.

Like new with UT-106 DSP receive Unit, R75 Sync Module, R75 Audio Filter
Upgrade (5.2 kHz), warranty card, manual, and original box. This is my first
whack at the shortwave radio hobby and I find it too slow. I'll walk away
for now and maybe try again when I'm much older. Asking $530 US plus
shipping.
Thanks for looking!
Brian

<miso@sushi.com> wrote:
>So for who are these signals intended?

Most of my books are 15-20 years old, so they may be a bit out of date.

In _Nuclear Battlefields_ by Arkin and Fieldhouse, a book on the infrastructures for nuclear war from 1985, they say that they're used for communications with submarines. That book says there are four transmitter sites in the Pacific, (Northwest Cape, Australia, Yosami, Japan, Jim Creek, Washington, and Wahiawa, Hawaii).

>The signal was quite strong, so you are probably correct. When you
>don't know exactly how to monitor a signal, it is tough to nail the
>frequency exactly.

I cheated. That is out of a Grove book, their _Shortwave Directory_ dated 1988, out of a longwave logging list credited to the LWCA (Long Wave Club of America?). They also list stations in Maine and Puerto Rico. But if you know your BFO offset, you can get a good idea if you zero beat, or otherwise measure the frequency, like with a O'scope.

>Do you know the mark/space frequencies?

It's MSK, Minimal Shift Keying(?). It's a very narrow shift, related to the baud rate. Even then, they have to switch the antenna tuner in sync with the modulation, according to some ham friends who got a tour of the place many years ago. (They date from the 1950's or eary 1960's).

I also wrote to this person, inquiring how they came to have this radio prior to its release. They wrote back:

I am very sorry for this misunderstanding. I went through the internet and I think this one really is not released yet. I was mistaken by my providers, they may mixed-up something. Thank you for reminding me this. I shell take this item out of auction

And yet, the auction continues. I just pulled it up on ebay. I'm not sure this person can end the auction now that there are 9 bids on the item, can he?

Well, I am certainly gratified to learn that your definition agrees
with mine and that we both are adept at using the dictionary.  However
"wagginitproud" was the one who used that phrase, and I suspect he has
no idea what the real meaning is. I was hoping that he would respond,
but alas no.
Having read his post I suspect he is quite adept at throwing around
phrases and otherwise performing public mind dumps, with little
understanding of what the words mean.  Like the term Nazi.

The title of this thread is interesting.

New *grundig E1* on ebay....

I'll bet a lot of people will associate this radio with Grundig even
though Grundig has absolutely, positively nothing to do with it.

I'm even curious to what extent Drake has had a hand in designing this
radio. They've obviously played some role, but you can scour the Drake
website from top to bottom and never see any discussion of the
E1XM--whereas you can't miss the Satellit 800 and it's up for sale
directly from Drake. Whatever role Drake had with this receiver, it
appears to have been pretty minimal.

But hey, who can resist paying tabletop prices for portable
performance?

Steve

Hi Steve, any chance you meant " 4.125 " Mhz?  Seems odd to find traffic exactly 1400Hz higher than ITU# 450, which is 4.125 and a very popular marine calling and distress frequency.

The difference between USB assigned frequency and carrier frequency is 1400Hz. Some purists still like to post assigned frequency instead of carrier frequency.  This confuses most hobbyists and serves no purpose since modern radios all display carrier frequency in their "window". Frequency allocations still use assigned frequency (1400 Hz above carrier and window-frequency) but that's the only place I see it anymore.

Best regards,

Jack Painter

jimg, if your hobby interests will not involve computer-control, and most seem to today, then the Drake R8 is a nearly unmatched machine. But since the best software control ever made for the Drakes (Mark Fine's/Fineware Smart-R8) is no longer sold or supported, that leaves the Drakes at a slight disadvantage. Icoms can be controlled by almost all radio software programs.

Best regards,

Jack Painter
Virginia beach, Virginia

Radio Australia much stronger on 9580 and 11880 than usual this morning and sounding like a local station with S10 level signals. New Zealand on the other hand weak and noisy but listen-able at 17:00 UTC.

To be more specific Dr. Utopia did not, does not and will never exist.

If you believe that Islam is the path to social redemption then take that

path.
If you believe that Democracy is the correct path then follow it.
If you are accosted while embarked choose your weapon.
If you do not choose a weapon you will simply cease to exist.

Mankind has fought over "ideologies" since the beginning of time.
It is embedded in his nature. Let nature takes its course.
For it will be nature who most benefits.

Hi Jack,

I'm too lazy to worry about assigned vs carrier frequency. I just post whatever frequency is displayed on the LCD readout on my R8B. It said 4126.4 khz, and I believe the displayed frequency is the carrier frequency in SSB. Maybe the fisherman were slightly off frequency?

I don't know, but they were entertaining to listen to.

Steve

Try taking your own advice. You just started an entire off-topic thread yourself. If you ignore the guy, he'll go away. All you're doing is feeding him.

Steve, I use my R8B as a guard receiver, and it's a champ in any band. It is indeed display = carrier. So yes I would say the fishermen were just doing what they often do, tuning up wherever they feel like it, and sometimes on whatever band they feel like, lol.

Jack

No. FRS radios are NOT allowed in Europe, etc.  There is a equivalent 446 service here.

Geoff.

Do yourself a favor and get the R8B for any kind of listening you want
to do and forget the R75 unless you want to play with the radios innards
to get the performance you want.

I wish more people would record this stuff. If you can tolerate having
a PC running while listtenting to shortwave, you can record using the
scanner recorder at www.davee.com. Adjust the squelch to zero to record
everying. I record in either mp3 or gsm.

I actually had worse reception of RA this a.m. than the past few days.  Snow
and cold here.  I'll blame that.

I would buy a set as they are cheap and portable. There is good radio on the internet & satellite but for me it does not match the thrill of DXing, I think shortwave will survive, even if the major broadcasters continue to give it up, there's new opportunities for lower power and exotic stations to be heard.

Looking to the future hopefully shortwave DRM will open up new possibilities.

Concerned eBay members can report items they think might be fraudulent by accessing
http://pages.ebay.com/help/contact_inline/index.html and using the 3 steps for contacting eBay.
1. "report a listing policy violation or prohibited (banned) item"
2. "Fraudulent listings"
3. "report a listing you think is fraudulent (you didn't bid)"

Someone doing that might indicate in their report that a reputable company like universal-radio.com says the radio is not expected to be released until mid 2005.
http://www.universal-radio.com/catalog/portable/0101.html

I'd guess we'd find out if the auction can be removed if that happens.

Bogie - Here's typing to you kid

Yesterday is dead and gone
And tomorrow is outta sight
Buy that radio, me bucko
And enjoy some DX tonight

Yeah, it was to cold in your neck of the woods for the radio waves so
they headed south and I got to receive them.

I agree that it would nice to have more recordings, but I don't have a
website to post recordings on and they'd probably be too large to send
via email.

Why? Nothing about SW on it.

You are a bad boy for cross-posting to unrelated news groups. This just leads to disruption of the news groups because the subject is off topic.

Get lost unless you want to post SW news.

There is less specifically directed at various places broadcasters feel
might listen with other means: N. American, Pacific.  That said, this
cleans up the clutter and allows us to hear stuff not directed our way like
things intended for Africa or Asia. Right now the new technology looks
pretty neat to many.  But I wonder if the radio for a fee concept will end
up where TV is. Limited on the free airwaves and more of the same crap via
fee.  You know: so many channels, nothing worth watching.  FWIW, SW does
have lots worth hearing still, I spend most evenings and early mornings
tuned to something, and it's got more than what I can get locally.

I'm currently listening to Radio Netherlands. 17,875 and 17,725 with big
signal, 15,315 a little weak and 17,810 is the weakest signal for me.

Why is it that you 'tards, when confronted with your crap, always seem to think someone is 'bitter'?

Is that some kind of 'tard codeword?

Continue to tote!

This religious war has been fought for centuries - the religious borders between Judeo/Christians and Muslims and their influence on geopolitical borders in European & M.E. States.

It should come as no surprise to free westerners that Islamic states must use the brutal dictatorship of socialist/communist fascism, under the guise of the Koran, to remain in power.

---

Christian-Sunni opposition rejects new pro-Syrian government

Beirut (AsiaNews) - Lebanon's Christian opposition has called the reappointment of Omar Karami to the post of Prime Minister "Rafik Hariri's second assassination" and has said it would not participate in the new pro-Syrian government.

...

The Christian opposition yesterday met at Kornet Chehawan in the presence of the Maronite Bishop of Antelias and under the auspices of Maronite Patriarch Nasrallah Sfeir.

In a statement released after the meeting, the members of the Christian opposition urged all Lebanese to pursue the struggle for Lebanon's independence from Syria and expressed their solidarity with the other sectors of the opposition, i.e. Sunnis and Druze.

Hizbullah Leader Nasrallah at Pro-Syrian Beirut Rally:
If U.S. Navy Fleet Returns to Lebanon They Will Be Defeated Again

http://memritv.org/search.asp?ACT=S9&P1=594%20

"We say to Syria, as your president, Bashar Al-Assad has said: "In Lebanon, your presence in not material or military. You are present in the souls, the hearts, the minds, the present, the past, and the future." I say to you, no one can get Syria out of Lebanon, or out of its mind, its heart, and its future.

"We emphasize that any mechanism for Syria's remaining or withdrawing from Lebanon must be subject only to the Al-Taef agreement. We, who are gathered here, have come to tell the world that we reject resolution 1559.

"Lebanon is a unique case. Lebanon is not like Somalia, in case you are thinking of military intervention. Lebanon is not Ukraine. Lebanon is not Ukraine. Lebanon is not Georgia. Lebanon is Lebanon, a unique case in this world. If there are those who think that they can bring this country down, with its regime, its security, its stability, and its strategic choices, with their connections, their positions and sponsors, with some demonstrations, some scarves, some slogans, and some the media - then they are wrong.

"I address the following to America. I address the following to America. I say to President Bush. And to Ms. Condoleezza Rice. and to the American-Lebanese field commander, Satterfield: You are wrong about Lebanon. You are wrong about Lebanon. Lebanon rejects the partition. Lebanon rejects civil strife.

"Lebanon rejects defeat. And I say to you, this Lebanon rejects death. Never will Lebanon change its name, its history, its identity, or its attire. Lebanon will not tear off its skin, or throw its heart to your soldiers' dogs so they will eat it. Lebanon will remain the Lebanon of the homeland, of Arab identity, the Lebanon of the resistance, the Lebanon of the entire nation.

"I ask you. You can make yourself heard by the commander of the American forces in the region, who is of Lebanese origin, John Abizaid - Are you Lebanese afraid of the American naval fleets? These naval fleets have come in the past, and were defeated, and if they come again, they will be defeated again. I say to the Americans: 'Don't interfere in our internal affairs.

"Let us be, and keep your ambassador in his embassy in Awkar. He should let us Lebanese be. We Lebanese are the most devoted to our homeland, to defending our homeland, to the existence of our state, to our national unity, to our life together, and to our internal peace. Remove your fingers - the fingers of civil strife - from our country.

"To Syria we say: Long live Assad's Syria! Long live Assad's Syria! Long live Assad's Syria! Long live Assad's Syria! Long live Assad's Syria! Long live Assad's Syria! The den of the lion (Assad) in Damascus will remain a den for all the lions of Lebanon."

Spending Taxpayers' Money-Surprising Differences Between China and the U.S.

China's CCTV recently broadcast a program titled "Letting the World Get to Know China." Mayor Cui of Weihai City, Shandong Province, China, and Mayor Ives from Redmond, Washington were guests of the show. The mayors discussed the construction and development going on in their cities. Towards the end of the program, both mayors extended an invitation to the other to visit.

Their responses show us some surprising differences in the two societies. Both mayors happily accepted the other's invitation; however, Mayor Ives said that a trip to China was not in her city's budget. She explained that office expenses are paid for by the taxpayers' money and that a personal trip to China would require sponsorship rather than having Redmond residents pay for it.

In contrast, Mayor Cui cheerfully accepted the invitation to visit Washington without any concern about travel expenses. He also told Mayor Ives without hesitation that he would pay for all her travel expenses to China, which were calculated to be more than five thousand U.S. dollars or over 40,000 Chinese yuan.
...
In China, however, anything that is considered a "public issue" will get full reimbursement. For that reason, Mayor Cui does not need to worry about paying for his trip out of his own pocket and can also cover Mayor Ives's travel expenses. Several decades of the Communist Party's corrupt rule have encouraged officials from various levels of government to selfishly satisfy their personal interests to travel by calling it a "public issue." Each year these corrupt officials consume several hundred million yuan of China's income.

By spending more than 80,000 yuan of Chinese taxpayers' money, Mayor Cui will be able to indulge in traveling and sightseeing without contributing anything positive to China or its people. How many mayors in China are like Mayor Cui? Untold millions of yuan have vanished like this.
...
http://english.epochtimes.com/news/5-3-11/26970.html

The Chinese Ministry of Public Security estimates that approximately 500 corrupt CCP officials have fled overseas, taking with them combined assets of US$8.46 billion. The corrupt officials have thus established an escape path for others to follow: Transfer capital, send family members overseas, prepare passports, abuse their power to enrich their pockets, quit their job without notice and obtain legal resident status overseas.
...
Another abnormal phenomenon is that high-ranking CCP officials, who claim to be atheistic, are frequently seen visiting temples, burning joss sticks and seeking out the Buddha's blessing.
...
The recent phenomenon of high-ranking CCP officials seeking blessings from gods and Buddha is a confirmation of the ancient saying of "Clinging to Buddha's feet with one's last breath."
...
One Web user, Mr. Hebin reminds us that mice know when disaster approaches. In English, it is said that rats will desert a sinking ship. It is not difficult to deduce that the CCP will soon collapse while all of its high officials flee the country in plain sight.

Exactly!  Checked the antenna just to make sure b/c we had quite of bit of
melting before this snow and I wondered about ice bringing it down
somewhere.  It is intact.  I must have been out of the path or something.
We're still getting aurora on clear nights, which I couldn't tell yesterday
of course.

Get the drake if you can afford it.  The Icom can be quite cheap and will
outperform portables in general though not many in the table top category.

Pirate on 6955 at 2100.

No ID as of yet, still a bit weak here, but playing "Along comes Mary"?

How much western debt does China hold?  I think it is quite high, particularly for the USA.  This would mean grave economic problems for the west if China is "on the verge of collapse".  As for N Korea, they are so disconnected from the world, no-one would notice except for those of us who like the comedy of their SW broadcasts

RN was broadcasting on these frequencies 19:00 to 21:00 UTC.

Now listening to Radio Japan on 17,825 with big excellent sounding
signal 21:00 UTC.

As you could guess RA is stronger earlier in the morning trending
toward a weaker signal later morning. The lower frequency on 31 meters
fades first so I switch my listening to the higher one on 25 meters as
late morning approaches. For this time in the morning 9580 was much
stronger and 11880 is little better than usual for me. Both were very
good.

New Zealand was a different story this morning at 17:00 UTC very weak
where they were very strong during my dark hours.

Snip I'll do this once.

Please don't respond to this cross posted thread where it is off topic
in most of the news groups or at least snip out the radio news groups
from the header if you do since there is no radio content. Thanks all.

I apparently have RNZ here at 2125 on 15265 but so weak as to be almost
inaudible.

How is it on your end today?

Then do yourself a favour and *don't(!)* take  the FRS-radios with you. The FRS-freqs are in use by other services in europe and you will risk to get in big trouble using the FRS-radios in europe. At least  the radios will be confiscated if you get cought and you will have a look from inside a police-station for some hours and maybe have to pay a additional fine....
PMR-radios have a TX-output of 500mW providing a range of about 500-1000mtrs (1500-3000ft) in urban areas and up to 5 km (3 mls) or even more from exponated locations.
These PMR-radios are cheap. Cost about 25 -50 EUROs a pair. They mostly run on 3 or 4 AAA-cells or rechargable Batteries.

The RX340 is connected to the horizontal loop is seeing average S6 and
the Drake is connected to the folded dipole cut for 25 meters shows S9.

With the volume up the Drake no background noise which is my definition of "sounding like a local station" the RX340 has some static hiss noise on the signal dips. If I switched the antennas I would expect the reverse although the Drake is a little more sensitive then the Ten-Tec.

Rock and roll playing right now.

Reading through a lot of the postings and actually seeing headers related to Short Wave.

Terry, thanks for letting us know about the restoration work on your radios. Sounds like fun. Still wish I had my original SW set. An old Packard Bell that tuned from 5.5-18 Mc. Strictly AM, but my first station was Radio Australia. I was only fourteen and had been doing a little AM DX on an old clock radio. Same night, got the BBC, Radio Japan, Radio Moscow, HCJB, The Dutch station (senior moment there, can't remember what it was actually called....) Man I was hooked!!!!! Been doing SW on and off over the years, still do a little AM DX, and listen to my scanners Guess I'm still hooked

Eric

I just looked at the Americas listings. Apparently programming in English and Spanish for the Americas will be reduced to morning and evening prime time, and the Portuguese service for Brazil will be eliminated. I noticed that the alternate freq for the English service to Central America (what most US citizens listen to) will be moved up an hour so that 9525 will be on between 0000 and 0300 and 6135 will be on 0300 to 0500 (right now 9525 starts at 0100 and 6135 at 0400). 5975 will still be on until 0500, but no mention was made of transmitter location being changed, so if the site for 5975 is moved off Antigua audibility in the US may suffer, although that's just speculation on my part.

Well around 17:00 UTC I only listened to them a few minutes and they
were noisy with the normal static noise you hear on any weak signal but
they were "listen-able" from the standpoint that without effort I could
understand all that was said over the bookshelf speaker. That is my
definition of "listen-able."

Currently they sound about the same on 17,675 right now at 21:47 UTC. I
expect them to sound better here a little later in the day.

My plan is to listen to RA again next on 21,740 at 22:00 UTC.

I should have mentioned the RN is hemmed in with a bubble jammer cover a
transmission on the lower channel and another strong station on the
channel above.

What's the future of shortwave radio?  Will it stick around in its current form? Is it worth it to even buy a set, or am I better off just listening online?
> >
> > Thanks!
>
> Setting concerns about BPL to one side, shortwave isn't going anywhere. Why would it? It's not like there's only room enough for a single medium of information in the world. When satellite radio and the internet lead to the closing of all newspapers, movie theaters, conventional FM and MW station, publishing houses, etc., then start to worry. But that's never going to happen.
>
> It might turn out that shortwave isn't as commercially viable as some other media. This, in fact, is how I *hope* things play out. Granted, it will result it more major broadcasters moving to other media, but it will thereby clear up a lot of bandwidth for smaller broadcasters, much more interesting content, and awesome DX opportunities.
>
> So, you have more reason to buy a shortwave radio now than you ever did before.

I hope that the only real commercial SW stations in the world-outside of the third world tropical banders-the US kook stations find that kook radio isn't viable in the next few years and switch to less weird programming or shut down altogether. Those stations are like the old Soviet blasters, all over the place and with signals so strong that they take up 10 khz of space on the dial. So far Bill Cooper is the only major kook to self destruct, although after Gene Scott's death I predict his stations like Caribbean Beacon will eventually wither away and die. I mean, how much money can the Wal Mart crowd give to their favorite kooks before they decide that they're either tapped out or that the apocalypse isn't coming and cut off the funds? If that happens, then most kooks who don't have local congregations (like Gene Scott did in LA) will go away, and there will be a lot of excess transmitter capacity.

I can't stand listening to Bill Handel. He sounds like he is spitting all over the microphone and desk when excited and I have heard enough dumb things come out of that guys mouth to last a lifetime. The radio personalities at KFI must carry their own microphone covers with them.

I have the car radio buttons on KGO 600, KFI 640, KABC 790,KNX 1070, KVEN 1520. I also listen to KGO 810 in the evening hours where they sound like a local station any night. I listen to the news on these stations and the most time. I listen to some of the personalities like Hannity during lunch time or John and Ken on the drive home but my preference at that time is Al Rantel on KABC.

The only personality I care for on KGO is Dr. Bill Wattenburg keeping in mind that I only hear KGO evenings.

Other than that the radio in the car is on a classical music station. Only one left 105.1 K-Mozart along with the public service stations.

> At room temperature (290 degrees K) with a 50 ohm system with a 1kHz bandwidth, this converts to a noise level of -144dBm. 15dB excess noise from the environment converts to a level of (-144 + 15) or -129dBm. This translates to a level of slightly less than 0.1uV. This is the noise level that you might find in a very quiet rural area. In my area just north of Chicago, the excess noise is around 4uV at 30MHz, increasing to higher levels on the lower frequencies. At frequencies below 100MHz, the predominant noise is man-made noise and atmospheric noise. Above 100MHz, the noise density decreases sharply with galactic noise being the dominating factor. This is the reason that a receiver with a 12dB NF is acceptable for reception below 30MHz. When you listen to receivers that seem to be quieter than others on the same signal, this can be because of noise in the audio amplifier or because of excess phase noise in the LO (synthesizer). Excess phase noise manifests itself in a couple of ways; first of all, it can cause that "white noise" that is sometimes experiences on signals, but more often it is because of signal feedaround in the I.F. filter chain. The second way that excess phase noise manifests itself is by the rising of the system noise floor when tuning very close in frequency to a very strong adjacent signal. Two ways that I know of to clean up this problem are: use a selective crystal filter (500Hz BW) at the Phase Detector's reference oscillator input in the synthesizer. The second way (mainly to improve close-in IP3) is to use a multi-pole filter with good shape factor as the roofing filter. The only problem here is when you use a multi-loop synthesizer to tune the minor loop at the 2nd LO frequency. The Racal 6790/GM addresses this problem by using a single loop Fractional N synthesizer. That is why they can get away with using that (8 or 10-poles?) filter at the 45MHz 1st I.F. As far as receiving higher frequencies, the benefit of a system NF of 2 to 3dB becomes apparent. There are GaAsFET devices that have a NF of a fraction of a dB,but those are more useful for EME communications, etc. Anyway, I hope this clarifies things.

< Snip >

-144dBm NF

Well, that's the way it is, even for expensive spectrum analyzers and other test equipment.

I see the main problem as reducing the nearby man made noise since you can't do much about propagation other than using directional antenna. The directional antenna is difficult for most people to achieve with full size antennas. The best thing to do is use an antenna that is not sensitive to the local man made noise. Lower frequencies will always be a bigger problem for the reasons you noted.

Nothing wrong with using the Internet to get leads. This is no different
than any other source of information.

No, this is about a test that is coming up soon in order to discover how
much sand can be turned into glass in a short period of time.

What would be a good "second" shortwave radio? Given the exchange rate,
I'm not in the mood to get a second 7030. I'm not a fan of black box
radios. I guess that leaves a tentec 350 or maybe build an elecraft.

Repost from yesterday.

Concerned eBay members can report items they think might be fraudulent by
accessing
http://pages.ebay.com/help/contact_inline/index.html and using the 3 steps for
contacting eBay.
1. "report a listing policy violation or prohibited (banned) item"
2. "Fraudulent listings"
3. "report a listing you think is fraudulent (you didn't bid)"

Let me get this straight. You rely on a fee for service media service
(XM satellite radio) for news, uncritically post far left wing
editorials off the internet as fact, and then call ME disinformed when I
point out that shortwave, as a free medium that relies on atmospheric
characteristics that cannot be controlled, is far superior to a medium
controlled by a huge corporation that makes you pay a monthly
subscription fee for access? Your thought processes don't make sense.

I understand noise computations. [In fact, my comment on it being proportional to the square root of bandwidth is because you need to multiply the input referred noise in v/root hertz by the square root of the bandwidth, assuming the noise is uniform. Conversely, take the square root of your equation.]  You have mixed in way too many side issues. So are you saying by 18db SNR, he meant a noise figure of 18db?

I've never seen the measurement done, but I assume when a radio specs a sensitivity at a given SINAD, there is a distortion analyser on the audio output. The filtered signal is the "S", and the "NAD" is the residual of the signal.

Follow the ebay auctions for SW77's and see what the final bids are. I know I've seen many go for between $300 and $400 dollars, depending on the condition. Also, if you have the older SW77 that has (I believe) nine antenna elements, it won't be as valuable as the newer version that has (as I recall) eleven elements. It's a tragedy that this receiver is no longer available through Sony. Very sophisticated for a portable radio.

Steve

presumably we get a much better grade of lies for the money we pay.
nothing of quality is free: you have to pay big-time to get the really
good lies. for example: WMD cost us $87billion.

Xref: g2news1.google.com rec.radio.shortwave:57375

About a month ago I posted a question asking if others had experienced local FM station interference at various frequencies on the FRG-100. I finally found the cause and a solution. The FM gets into the receiver thru the 12V power cable and any other connections to the receiver (external spkr, tape recorder or computer connection, etc.) IT DOES NOT ENTER THRU THE ANTENNA; in fact, you can ground the antenna terminals and it's still there! The FM signal mixes with the 2nd harmonic of the first local oscillator for some reason, and this allows either the sum or difference signals of the oscillator's 2nd harmonic and the FM freq. to fall at various frequencies from 1 to 30 MHz. My worst were on about 5.06 and 13.1 MHz and this computed out exactly to two of the local 100 kW FM station frequencies.

The FIX: I was tired of that oddball FRG-100 power connector and the inability to use a standard 5mm coaxial power connector (common for most receivers)with the radio on camping DXpeditions so I purchased one of the standard types from Radio Shack (#274-1582), drilled an appropriate hole and mounted it just to the left of the existing connector in the blank spot on the back panel. I then soldered a small powdered iron torodial filter of about 10 uH between the connector's + pin and the top edge of the rear fuse holder (remove fuse first!) I then a soldered a 0.1 uf ceramic capacitor to either side of the toroid and the other side of the caps to chassis ground forming a pi filter. I then changed the plug on the power supply 12V cable to the standard 5mm male coaxial mating plug. The FM "intermod" is now less than S-2 to S-3 with no external antenna as long as I don't connect anything else to the accessory jacks on the receiver's rear panel. Once the antenna is connected, atmospheric noise or any signal that activates the AGC wipes it out.

I hope this helps some of you that may have this problem. I think the direct ground connection to the chassis helps the most. The oddball stock connector connects the power ground to the pc board ground plane very close to the first mixer. This is probably the cause of the problem due to common mode ground loop problems in the 100 MHz range.

Frank

ME a doctor? Thank goodenss NO!
I started tinkering with the radio the afternoon we got the antenna up.
A friends dad was in the NG or reserve and he gave me some "nifty"
earphones that I had to add to my radio. I still have the scar on my
right leg where I dropped a big splotch of molten solder while I was
attempting to solder the earphone jack. I was wearing shorts and my
parents were very upset, They thought I had better sense then tto work
with 700F metal while in shorts. Since the radio had an isolation
transformer that I used under pain of losing my radio, my dad just made
sure that I knew enough to stay out of the B+.  It  may sound like I
made all the mods in a smooth linear maner, but it was nothing that
organised. Far from it. When my uncle dropped by on his way back from
leave I asked him about these strange sounds. Tune in FSK and CW in AM
and you will see what I meant. He used his little portable trnsisotr
AM/MW/BCB Sony? as a BFO, the LO harmonics where strong enough to at
least get the point across. He made a hand drawn copy of the schematic
that dad's friend gave me the night he replaced the caps in the radio.
>From that he devised some simple improvements. I was 12 years old.
Other then homework and my choes,I had a lot of free time. My parents
limited my TV watching to a few shows a week. So radio kept me out of
worse trouble. My uncle would dream up a mod and mail it too me. Those
that requried me drilling the metal chasis my dad inssited that he help
or later supervise. The little add on BFO that I built still works
fine. Even though I think crystals were overkill. My uncle sent me a
matched as in 455 +/- 1.6KHz, or KC as the crystals are labeled.  I
never thought of it until this morning but the BFO makes a fine IF
peaker! I lived for radio. Dad got the Knight kit after I figured out
that I could take a FM radio, tune it to a local station, and FM the LO
by adding AF to the AFC line. Worked very well. Maybe too well. I
covered the entire subdivision. Very stable as I was locked to a
commercial station. I can't remember now if the LO was 10.7MHZ above or
below the station I was tuned to. I suspect dad would have freaked if

he had known I fed the Knight to a 100' antenna.  My friends and I
scoured he area looking for radio or TVs on the curb awaiting trash
pickup. I was the talk of school when I wrangled permission to take my
sacred radio to school. Although mom made me leave the tubes at home.
Bummer. In the grade
the order came down to clean out the shop. They allowed me to go
through
the "junk" before it went to the dump. I got a WWII trainer O'scope, a
simpson that dad and I fixed that he still uses. Several micrphones.
Lotsof neat stuff.
I had to call dad at work and explain the windfall and he took off a
couple of hours early to haul the stuff home. I have the complete set
of Popular Electroincs from oct 1954, 1st issue, until Aug 1978. I
sweet talked the
school system into letting me go to vocational school starting in the
10 grade.
Radio and TV repair. Now I had no intention of fixing trashed TVs for
the rest of my life, but I saw it as the frist step toward a real
future. I went to Votech fulltime for the summers and had to go a final
4 months to get my diploma.
Then I started college. I was very lucky with great parents and
teachers that,
while they didn't have a clue, knew it and gave me pretty free reign.
You might say I still have that love affair with radio. It is sad that
as the equipment has gotten better and cheaper, the available stations
to listen to
have decreased. My Zenith was a good radio in it's day, but compared to
even my Grundig FR200, pretty far down the good scale, blows it away.
But I will keep the Zentih and use it for special listening. Like my
birthday and the holidays. I am almost afraid of what my parents will
find as they continue to clean out their home. They are planning to
sell and move to a retirement home,  so if it there they will find it.
Terry

Personally I am all set with portables...I have my Grundig YB-400 (which I use with a Sony AN-LP1), which is excellent for me right now. I am looking forward to the warmer months, when I'll be able to take it outside and hear the world in great clarity. I also have a Grundig Mini World 100 at work. I pretty much just listen to AM on it, which is fine. I like it because it's small and is easy to tuck away in a drawer, or put in a coat pocket.

I hope to get a decent tabletop eventually, though the usefulness of a tabletop seems limited for me...being in an apartment, I can't run a wire outside. I kind of like the Satellit 800 as well (at least the reviews I've read); maybe I'll get one of those eventually.

It's cool if someone wants to pick up every portable that comes out...but I wonder how different one Chinese portable is from the next...it's not like there are so many different features between each radio.

The Ten-Tec I own is a 340 and I can't comment on the 350. The 340 still costs $4K and I don't think you you want to pay that much. It's a real nice radio but way beyond the diminishing returns factor. The 350 looks like an OK radio but people here have complained about the performance here and the lack of software updates to address issues they still have with the unit.

You can't go wrong with a Drake R8B for any SW interest you may have. The R8B and 7030 have similar sound qualities with bookshelf speakers in use.

You could get a ICOM R75 if you want to play radio doctor since you seem to understand radio or electronics theory. Plan on getting an external speaker right away if you go with the ICOM. If you are a program listener like I am it's not a good choice. This unit is a POS for program listening as it will never sound as good as an R8B or AOR7030+. The R75 has a tiny advantage in sensitivity over the Drake if DX'ing is your interest, that and the twin passband and DSP might give it an edge over the Drake in some situations. My opinion here is just based on specifications. I don't plan on getting experience with the unit.

The R8B internal speaker is just OK and it sounds much better with an external speaker. The RX340 internal speaker is also just OK and the $4K unit also sounds better with an external speaker. A $20 non amplified bookshelf is all you need.

http://www.fcc.gov/mb/audio/decdoc/engrser.html#EARLY
The older annual reports often include lists of stations licensed as of that date.  However, the FCC's predecessor agency FRC didn't exist until 1927 - before that date, radio was regulated by the Department of Commerce - so FCC/FRC records don't go back to the first days of broadcasting.

http://earlyradiohistory.us/

Look for a copy of the "Broadcasting and Cable Yearbook" in the University library.  This book has a list of radio stations with the date they first signed on the air.  (however, that list is missing many stations that have gone off the air before the date of publication.  If the library has more than one copy you may want the *oldest* copy available.)

But I think you'll find there's considerable disagreement as to which radio stations were first.

- Do you mean only broadcasting stations?  (hams and ship-to-shore transmissions came first)

- Do you mean the first station licensed with the specific intent of

broadcasting?  (some stations were licensed for other services but also
engaged in broadcasting, or later transferred into the broadcasting
service)

It's generally accepted that KDKA in East Pittsburgh was the first
station authorized in the U.S. specifically for the purpose of
broadcasting.  WWJ (Detroit), WHA (Madison, Wis.), and KCBS (San
Francisco, originally in San Jose) claim to have been on the air first
but not with broadcasting licenses.

I pay a fee to them so I can have the same content at will that you
get sporadically.

You dont need a PhD to operate an R-75.  It is no more complicated to use
the an R8.  Where are you coming from ???

Michael

In article <1110762812.636759.306830@z14g2000cwz.googlegroups.com>,
fcathell@msn.com wrote:

> About a month ago I posted a question asking if others had experienced local FM station interference at various frequencies on the FRG-100. I finally found the cause and a solution. The FM gets into the receiver thru the 12V power cable and any other connections to the receiver (external spkr, tape recorder or computer connection, etc.) IT DOES NOT ENTER THRU THE ANTENNA; in fact, you can ground the antenna terminals and it's still there! The FM signal mixes with the 2nd harmonic of the first local oscillator for some reason, and this allows either the sum or difference signals of the oscillator's 2nd harmonic and the FM freq. to fall at various frequencies from 1 to 30 MHz. My worst were on about 5.06 and 13.1 MHz and this computed out exactly to two of the local 100 kW FM station frequencies.
>
> The FIX: I was tired of that oddball FRG-100 power connector and the inability to use a standard 5mm coaxial power connector (common for most receivers)with the radio on camping DXpeditions so I purchased one of the standard types from Radio Shack (#274-1582), drilled an appropriate hole and mounted it just to the left of the existing connector in the blank spot on the back panel. I then soldered a small powdered iron torodial filter of about 10 uH between the connector's + pin and the top edge of the rear fuse holder (remove fuse first!) I then a soldered a 0.1 uf ceramic capacitor to either side of the toroid and the other side of the caps to chassis ground forming a pi filter. I then changed the plug on the power supply 12V cable to the standard 5mm male coaxial mating plug. The FM "intermod" is now less than S-2 to S-3 with no external antenna as long as I don't connect anything else to the accessory jacks on the receiver's rear panel. Once the antenna is connected, atmospheric noise or any signal that activates the AGC wipes it out.
>
> I hope this helps some of you that may have this problem. I think the direct ground connection to the chassis helps the most. The oddball stock connector connects the power ground to the pc board ground plane very close to the first mixer. This is probably the cause of the problem due to common mode ground loop problems in the 100 MHz range.

Something on the order of 100MHz FM has got to be common mode on the cables going into the radio. I would expect a common mode choke to work better than the modification you made. Use just a few widely spaced turns of the power cord on a ferrite EMI type core should do the trick. The choke will be more effective on the radio end of the cord in this case.

I don't like being lied to so fortunately it only cost me a few moments
time to kill file an off topic, warped, cross posting Troll such as
yourself.

I don't know what you mean. I can hear the BBC literally at any hour of the day. Maybe you just needed a larger antenna. What were you using? You don't have to throw your money away on XM.

Steve

A new car radio up grade to get it is around $350 and the subscription
cost is around $10 a month if you sign up for a year.

Where am I coming from? I coming from seeing someone new to the hobby
buy a R75 then decide the hobby is not for them and selling it. Then
exit the hobby. That's were I'm coming from.

If you can't figure that out me amount of explanation from me will help
you.

The 350 has not had a firmware upgrade for nearly 2 years. I have one in a closet, as it is not a particularly good AM DX machine. I have an old R8 and a modified R75 that both outperform it.

I used to know a tv set repairman guy about fifty years ago.One evening
I got invited to have supper with his family and his tv set was the
worst looking tv set I ever saw in my life before,but it worked great
though and most of the time he had the cabinet off of his tv set,only
the chassis of the tv set sitting on a table,his tv set running just
like brand new.Caps and recaping,what does that mean? TV sets are
actually Radios,the main difference is there are cathode ray tubes with
photons "painting" the pictures on the tube.

To continue my misinterpretation, I don't thing the British did as well in
the War of 1812.  They lost on Lake Erie and Lake Champlain. Think they
were winning in the Atlantic though.  There was a strange little war on the
west coast in the 1840's also, over some little island or something and if
I recall both countries disavowed it and had it settled by a commission
later.  I'll shut up about now.

This group has the most complete collection of modifications, usage tips, links to related websites, documentation, and photos along with a user survey and a message forum (3250 messages archived) to help you get the most fun and DX out of your Realistic / Radio Shack DX-394, DX394, DX 394.

Over 90 mods and tips now listed plus a dozen on the To Do or Wish List. More mods than for any other general coverage receiver! Thoroughly documented with a Master Index. If you like to tinker with radios, I know of no other recent model that lends itself to as much fun in this arena as the DX-394. Great platform for learning radio-electronics. Always 1 or more FA on eBay.

Active & friendly user community now with over 800 members. Some members are keen short wave listeners; others are into AM DXing and a few enjoy long wave. Many experiment with antennas and some are ardent modifiers - customising and souping up the rig as hot rodders would do with cars. You'll find lots to interest you and help get the most out of your radio.

Mods & Tips since 17 Oct 04:

- RF: FRONT END PROTECTION FROM HAM TRANSMITTER

- RF: OVERLOAD MITIGATION - WIDEBAND PRESELECTOR

- ANT: WHIP - REPLACEMENT

- RF: OVERLOAD MITIGATION WITH OUTBOARD ATTENUATOR

- AGC: HOTTER S-METER AND AGC ACTION

- DEMOD: SYNCHRONOUS AM DETECTOR

 - OSC: UPGRADE STABILITY OF 2nd LOCAL OSCILLATOR

 - RF: SHIELDING WITH ALUMINUM DUCT TAPE or STEEL TAPE

 - CONTROL: CUSTOM MAIN TUNING KNOB

 - AUDIO: ENHANCED ANTI-CHUFF MOD AKA MODE CHANGE CLICK BLANKER

I'm getting 6135 and 6005 (Africa) reliably most evenings here (about 0500
UTC and after) in addition to 5975.  RA was quite good this morning on 6020
at 1200 UTC and after.  There was a trucker idling down the block for a
couple of nights and I think this may be my poor reception source.  His
parking that is illegal in this residential area and I may get him to go
somewhere else if this repeats, though he was plugging in for charging and
heat I noticed - given the temp I understand both.  He left about 5:30
local or 1130 UTC and this cleaned up reception.  Anyone know about diesel
engine interference or is it probably his peripheral things?  He has 3
antennas and a satt dish on this rig. But I was thinking CB and maybe
satellite radio but I don't know what the latter looks like.

every Sunday night I am amazed at all the stuff Radio Mart comes up with. as a radio collector myself I can't come anywhere near the volume he buys.  I advertised I wanted an R-820 for my collection and all I got was a jerk who bragged the last one he had went to Japan for $900. and when I try to buy something real nice it seems that it gets bought 15 minutes after the listing.

and Radio Mart comes up with several DOZEN items a week. takes me a YEAR to get that amount of stuff. and usually when I buy something "mint" it has missing parts or hidden damage.

any one have any idea how he comes up with all this stuff. it is not all off ebay, ebay as a source is only a percentage of his listings ?????

I received the first PL-350 in the USA and I think the audio on the 350 is
better than any other radio in its size class.

Hmmm. I wonder if you're referring to the San Juan Island "Pig War".

http://www.outwestnewspaper.com/pigwars.html

"The Pig War began on June 15, 1859, when an American settler named Lyman Cutlar shot and killed a trespassing pig belonging to Englishman Charles Griffin of the Hudson Bay Company. "It was eating my potatoes," said Cutlar, who had already warned Griffin to keep his pig out his potato patch. "It is up to you to keep your potatoes out of my pig," was Griffin's reply."

I'd say Cutlar did just that. Makes me proud to be an American. ;)

I agree - by virtue of zeroing the hets, he is actually on 6973, but he is coming in with less interference on 6975, here. But the longer I listen, the more obvious it is that it's a conventional broadcaster.
I have output power shown as 5kW, but 10kW is more bellieveable (if less impressive as a catch!)

Tony

Drake hasn't brought out a new model in quite some time. I doubt that things are going well for the company. In fact, sales of all tabletops have been going down while sales of cheap Chinese portables have been going up. Passport said in their 2005 edition that the Sat 800 (which is based on the Drake SW8 but made by Tecsun) will be discontinued shortly. AOR no longer sells tabletops in the US or indeed anywhere else except the UK. Maybe the end of tabletop makers in the west (including Japan) will lead to Chinese makers filling the void-Degen for one is seriously talking about a high end receiver, which would probably be too expensive for its traditional domestic market. But it's possible that the DXer market is at its saturation point and that demand for tabletops can be satisfied by all the used models already out there. I don't think it's the beginning of the end for shortwave radio in general-like I said Degen and Tecsun seem to be doing well-but it may be the end of the traditional DXer portion of SW.

Old burnt out TVs are readily available in the back alleys of Sacramento's Midtown District. I thought of taking one home, taking pictures of me smashing it with a sledgehammer, then making a flyer with the pic and the tagline KILL YOUR TV and posting them everywhere.

I should note that one rarely finds radios of any kind, even cheap boomboxes, in the alleys. Just TVs-when the CRT dies they're useless. I once found an old two tube portable record player, though, covered in tweed, but the motor was bad.

I watch my TV for about an hour a day-a half hour for local news and a half hour for national news. If I'm up late I may watch the 10pm news.

Very good with lots of signals all over the bands 16 through 60 meters.

Someone was talking about BBC transmission cut backs to north America so
I checked out 5975 and 9525 just now and they are S9 with no
interference, no noise or fading. They sound like a local station.

Radio Australia weak on 15,515 and 13,630 with some kind of interference
on the lower sideband.

Radio New Zealand with a nice signal fluctuating S6 - S9 playing music,
no noise or fading.

That's because you didn't know how to look... and you have no memory of things past...

How many damn times do you need to be told that the station on 6973 is an Israeli station?

Continuing this topic...I believe someone else brought up on this board a while ago, that one of the most requested items for victims of the tsunami in southern Asia were radios. Gee, with the prevalence of internet radio and satellites, one wouldn't think of those anymore...also, during the September 11th attacks, when cell phone towers were down in New York, ham radios still worked.

Radio (and shortwave) aren't going anywhere.

This radio is apparently NOT related to the Eton/Grundig S350, which is
the Tecsun BCL-2000.

The biggest problem you have going there with identifying a station is that you don't know how to zero beat a signal.

And that damn twin pass-band crap on an R-75 sure isn't helping.

Sheeeeeeeeesh... and everyone wonders why SW is damn near dead...

Got folks who remind you time and time again as to what is on 6973, night after night after night and every time you stumble upon you can't remember who or what it is...

Laughing my DX'ing ass off at the 'tards yet again!

I'm not sending an email copy as requested. I post responses to the
news group. Change your defaults please.

This is not an advanced idea but a good one and as far as I know the
best solution. I don't think the rotor will be worth the time and money
though. Just point it for east - west reception and that will most
likely be the best you can do. The rotor will only let you select,
which of two competing stations you hear on a channel if in different
directions. I doubt you will use it to null a local noise source since
you should not picking them up in the first place.

Shortwave radio is the only truly global information medium that can't be censored, controlled by a handful of megaentities, or blocked. Shortwave signals can't be grabbed and burned like a newspaper or a computer disc. Shortwave isn't dependent on some omniscient controller to decide what gets through the filter-SW has no filter.

I'm picking them up very well here in Miami on a R-75. There was major
interference like 10 min ago but it cleared up nicely.

Try to remember... just once... give it a try!

Learn how to use that damn twin PBT, you can master it!

Meanwhile I'm gonna be LMAO.

Sorry, can't help it!

```

The BCL-2000 is analog and huge! The PL-350 is all digital, and it's small.

For a good size comparison, Tecsun has a picture on their home page that
shows these two along with the PL-550, PL-230, and the PL-200.

The science is never finished.

There is a new issue of the solar system passing into a more dense
galactic cloud of dust that can have serious implications for us on
earth. I want the funding to continue the examination of the solar
heliopause.

Every night a signal propagates from Israel, which could happen often
since they broadcast every day of the week.

I don't know what the problem is either as I have seen it listed on
several frequency lists it should be no surprise.

Yes, but they are trying to do this with DRM.

You don't want to go this. The CRT is under vacuum and if shattered it
will implode followed by an explosion of glass. Cut and break the neck
first, then you can smash the tube.

S9 +10 with some static in Central Va.
Vern had some curious and intelligent
comments but now that the "late night shift" from
Michigan and Ohio are in there the freq's gone right
into the wood structure with the half-moon cutout on da-door out back....

Wheeeeeeeeeeeeeeeeeeeeeee!!!!!!!!

A slow leak somewhere in the South where WWCR is located?

That's more certain. A slow leak in Los Angeles.

Although the RA17 is a VERY good receiver, this person must have had a bad 6790/GM. Also the 6790 does not have Sync detection, so I am not sure where this eBay seller got that misinformation from. I have a 6790/GM.......typically, the 6790s have crystal filters, although LSB/USB mechanical filters were an option. I do have this filter set, but haven't bothered to install them. The crystal filters work fine. Also, the 45MHz roofing filter in the 6790 is at least an 8-pole unit and a quad JFET ring mixer is used. This receiver has an IP3 of +30dBm, so it isn't a slouch. More eBay hype.................................it would be nice if this person could at least get its facts straight. Another thing.....how did this person measure the S/N ratio, with a Noise Figure meter? With your typical 15db excess environmental noise, any differences in sensitivity would be masked. It could be that this person was talking about audio quality. Those old tube units do sound very good.

I am not sure how much Drake wants for their optical encoders, but you can use either an Oak-Grisby or a Grayhill optical encoder. These are Quadrature encoders that have four pins.............these are Channel A, Channel B, V+, and ground. Universal hookup.................about 30 dollars USD.
I have gotten to play with the R8 and it is a nice receiver. The R75 is also a winner, but it gets better after you do those mods. The only mod that I have done to my R75 was to remove that MW attenuator. After that, it's a great MW receiver. Now, if they would only do something about that "large front mounted speaker". Another thing about the R75..........it would be good to regulate that wall wart down to 15 volts, using a 7815 positive regulator. Dave Zantos (N9EWO) just informed me tonight that there have been internal regulator failures with the R75. I haven't used mine enough to notice how hot the receiver actually does run.

I figured someone on here might be interested in one. Yes, I've seen
numerous cases where descriptions were just plain out wrong.
I even wrote a couple people to correct them but I was told to mind my own
business. Nice...

Universal recently announced that they are again selling the AOR AR7030 Plus which is very good news.

I do not want to get into an argument and I recognize that we all have our favorites, however, it is my opinion that the AR7030 Plus is positively the finest short wave radio ever designed and it is certainly the best model under $2000. If you have or can get the 2005 edition of PASSPORT TO WORLD BAND RADIO, take a look at its specifications on page 168. They are even better, in some key aspects, than the "professional" Ten-Tec or Watkins-Johnson which cost far more. Numbers certainly do not tell all, but you cannot ignore them either.

I hope, however, that the Drake R8B and, especially, the Grundig Satellit 800 are not discontinued. It would seem to me that, at least in the case of the Grundig, there is still considerable demand. I do not understand why Eton does not put some advertsing money into it; after all, its development costs have been amortized by now so each sale is pure profit.

Best,

Joe

Liberty Net 3950 KHz  Boy, they do get around.

Perhaps banning alcohol sales on Saturdays would prevent the jammers from
dogging them around the dial. Too bad this country doesn't have an FCC. Oh,
what am I saying, they do, the just don't enforce laws equally.

There's also a more general theme here, in my opinion. If Drake
discontinues the R8B, then there are fewer choices for all of us when
it comes time to buy a new, high quality receiver. In this respect,
it's not just bad for Drake lovers, but for anyone who might one day
have purchased a Drake. I felt the same way when AOR stopped selling
the 7030+ in the US, and am really happy that Universal is selling it
again!

While I don't care for the 800, some folks like it and I'd like Eton to
continue it for them...assuming Eton can't come up with something
better. It should be priced at around $300 though--not a penny more.

Steve

Roughly as follows, and since it takes effort to translate  the
manga histronics of the slogans I probably won't do more or
comment more about anything  beyond this email unless radio
related.
Top slogan: Against oppression -- a mighty blow i.e., smash US's
oppression of us with a crushing assualt or strike
Bottom: Against castigation  -- ruthless beating, i.e., merciless
punishment for the way we are derided and treated.

These are Chinese character derived so although simple syllables
are saturated with varied meanings that cannot be simply
translated into another language except Chinese or Japanese..

By the way, North Koreans live and breathe these slogans.  They
fervently believe them and will gladly die for them,  especially
the troops and average person. .

I know what you mean. I have a friend that always says that good deeds don't
go unpunished! Sometimes, when you try to help somebody out, the don't
appreciate it.

One of these days, if I can find one at a not so insane price............a
couple of years ago, I put out my feelers on the NG for a 515 and some
fellow in the Southwest offered me his unit for almost 1000 dollars. A bit
high, but I guess either the demand was there or he must have thought I
staggered in from the local tavern.

I'm really kind of baffled what the guy means my 18 db signal to noise. It's kind of meaningless without knowing how it is measured. Noise is propertional to the square root of the bandwidth, so you need to know what filter is being used.

I'm not sure you would use a noise figure meter. Seems to me you would want the SNR measured from RF input to speaker output because that is how you use the radio.

I may do this measure some day for yucks, but it will be a bit of work. I'd have to fire up the old HP334A just to measure the THD of my RF generator, not that I ever used the box in that mode.

My guess is the better the cable, the better the balance of the twist, so the lower the RFI. If that were the case, then maybe going cat 6 would be the way.

Also thinking out loud, it seems with DSL you should filter the analog signals as soon as possible, i.e. where it enters the house rather than at the phone with those in-line filters. I'm sure the DSL on the crappy phone twisted pair radiates a bit.

ZIMBABWE [non]

Excerpt from website of SW Radio Africa:

We're being J A M M E D
We had Plan B but now we?re already on to plan C!
For the full three hours of evening broadcasts (6 - 9pm Zim time [1600-1900 UTC]) we will be on 3230Khz in the 90 metre band.
For the first hour of evening broadcasts (6 - 7pm Zim time [1600-1700 UTC]) we will also be on 6145Khz in the 49 metre band.
And for that first hour we will also be on 11845Khz in the 25 metre band.
Yes we?re broadcasting on 3 frequencies.
Don?t forget medium wave and shortwave broadcasts in the morning.
5 ? 7am Zim time [0300-0500 UTC] Medium wave on 1197Khz
Shortwave on 3230Khz in the 90 metre band

Good idea, especially when you want to use them other than to talk
between 2 cars whilst driving.

>Cell phone looks prohibitively expensive to take the local
>cell phone over (it will work over there). I can roam through Canada and
>most of the USA as if local with no additional charges but not over there.
>
Using a lokal prepaid card might do the trick. And in case of emergancy
you can call for help.
Also phoneing on prepaid cards isn't really cheap.  Using the same
provider it is about 30 (EURO-)Cent per minute with 60/1. First minute
is allways charged fully.... :-(

>This will allow me to avoid women's clothing stores etc.
>
This will justify any amount of charge :-)))
```

Maybe you got something wrong?
You probably will be taken to a police station and questioned there with
the help of a translator.
This will cost you some hours and some EUROs in worst case.

Hmmmmm... Drake R9... I just wonder if the reason that Drake has limited availability up on their website for the R8B is that they are trying to sell off the remaining stock before introducing a newer model?

On the other hand, I spoke to Drake last year and they indicated at that time that there were no plans to introduce another receiver... the R8B was it.

Guess we'll have to keep watching Universal to see what comes up on their R8B page, at present there is no indication there of limited availability or discontinuation.

It'll be a sad day if Drake once again leaves the receiver market.

"Sedan" is code name for Sudan;

U.S., realizing the risks of nuclear tests in the United States West, conducts the most deadly ones in a poor, developing country,  Sudan.

http://www.sudani.com/dir/s.asp?l=29454

Realising that Movie star John Wayne had been diagnoised with cancer,
contracted by working  in  radioactive sections of the Nevada desert,
U.S Officials, acting under the auspicese of John Foster Dulles,
Bribed Sudanese officials with Liquor and Prostitutes,
then set up a secret nuclear test site in the Sudanese desert.
U.S. Nuclear tests were then conducted in Sudan between 1962 and 1970,
when Richard Nixon,  alerted by the Soviet Union  of the goings on in
Sudan,
ended this  test program.
The entire program  is still classified as top  secret

You can get a lifetime subscription to satellite radio, along with a receiver, for less than the cost of many worthy HF receivers (and a hell of a lot less static).  The BBC is trying to tell you something.

I could also listen to them by flying to the UK, sitting in their
studio and listening to the announcer in person. And I'm about as
likely to do that as I am to subscribe to XM Satellite Radio.

Steve

Have they figured out/bothered to how to align it properly, so that the
displayed frequency matches the received frequency?

No one receives more handouts from the US government than the businesses who finance the campaigns.  Corporate welfare costs We the People 3 times what all social entitlements cost.

Lobbyists write legislation and our prostitue ''lawmakers'' provide the rubber stamp.  If the People ever wake up, there will be blood in the streets of Washington (aka Cracktown) ankle deep.

One went on Ebay a year or two ago for $1400+, it was mint, but DAMN! I almost put mine up after that, but the next one, at least as nice looking as mine, but stock (mine has been modded by Gilfer and Universal) with the crappy sounding speaker for about $675. I passed on one that looked absolutely brand new, with the 24 channel mem box, and that worthless speaker, for (I think it was) $750. None of the three pieces had any signs, not the slightest, of use on it. I kick myself for not taking it. Even the box was perfect.

Of all the receivers I have owned since I was a kid, the 515 is my favorite. Right now, I have a 525 a Icom R71A, and a Hammarlund Hq 100 that bears little resemblance to the original radio inside (3 extra tubes+ many mods), and works amazingly well for the 58 bucks I paid for it..better than any under $500 (new) receiver I have ever tried. If only it was a tiny bit more stable..

BDK

Perhaps this was the subject to an editorial by Emily Latella?

(Emily Latella was a persona of the late Gilda Radner on NBC's
Saturday Night Live. She used to do editorials about a phrase she had
misheard ["Soviet Jewelry", "Presidential Erections", "Violins on
Television", et alia] and, when informed of the actual phrase, she
would say "Never Mind".)

I had a 515 that I bought back in the 90's with the memory, remote controller and speaker for $500. It was mint.

It didn't stay here long. The package was split up to several buyers.

Pre eBay.... Ham Trader Yellow Sheet days.

Am new to this group, and was wondering where each poster is located for reference of conditions, skip, etc.

I'm located in Viera, Florida a new town, 18.1 miles due west of Cocoa Beach, FL (where I work) and ca. 50 miles due east of Orlando, Florida.

Using a Kenwood R-2000 and MFJ-1020C for SWL and a Kenwood TS-830s and Buddipole antenna for hamming (which is very limited here.) Licensed as ham since 1965.

Thanks in advance!
John-K4JDP

Really.... so, does it beat the DE-1103 in image rejection? Or, are all those stations that it is pulling in that you can't hear on the DE-1103 just images? The PL-350 is a single conversion radio, is it not? Does it have the switchable IF's of the PL-550?

Then vote for someone who doesn't or move to a place where only the government
writes its own legislation - like P.R. China, N.Korea with free rubber stamps.

You miss the point.  The corruption controls the media and therefore
the elections.  Until the People get the media back (or learn to
ignore it)  this will continue.  There used to be rules that prevented
the media from being used for propaganda.  Mr. reagan did away with
them.  He was a very Unamerican person.

I see little difference between our system and any other toatlitarian
government.

Howdy John
I am not sure what good it would be to know poster's locations.

But for skip conditions etc, the beacon systems around the world are  great
real time indicators

See NCDXF/IARU Beacon Network
 http://www.ncdxf.org/Beacon/intro.html

 G3USF's Worldwide List of HF Beacons
http://www.keele.ac.uk/depts/por/28.htm

Also
ARRL prop charts
http://www.arrl.org/qst/propcharts/

C.L. - Reader Beware --
I doubt, therefore I might be !

K4JDP50@webtv.net (J P) wrote in
news:26690-4234579D-24@storefull-3176.bay.webtv.net:

Acrimony, to get you familiar with the word, if you are not as of yet:

Main Entry: ac�ri�mo�ny
Pronunciation: 'a-kr&-"mO-nE
Function: noun
Inflected Form(s): plural -nies
Etymology: Middle French or Latin; Middle French acrimonie, from Latin
acrimonia, from acr-, acer
: harsh or biting sharpness especially of words, manner, or disposition

You will find a lot of this here, as well as some actual "On Topic" posts. (everybody makes mistakes).

Anyway, welcome to the NG.

I live in Pittsburgh Pennsylvania, use a Icom R-75, Yaesu FRG-100, Yaesu FT-840, Sony 7600GR, and more. I have one outdoor long wire antenna and one indoor antenna that circumscribes the small room where I keep my radio and computer. Oddly enough, they usually provide similar performance, especially for the range of SWLing that I do. (no intense DXing).

I am curious about the inclusion of your e-mail address without any attempt to keep spam-bots from purloining it, thereby risking inundation with spam? Also your FCC license number change. Perhaps I am showing my ignorance (most likely), but does your FCC number change as you progress to higher levels, did it expire and was reissued, or is your call sign a vanity sign?

Has long listening sessions ever given you tinnitus? If so, try visiting
Jonathan Creek in Maggie Valley, NC. A very restful place.

Regards.

Dr. Artaud

It's labeled in Chinese. Liypn provided a manual that has a picture of the PL-350 with English labels. Works for me.

I noticed alignment problems with a couple of radios, especially where FM stations sounded better when they're tuned to where the dial reads 96.15 or something like that, but I think those offending radios were Radio Shacks or Sangeans that did that.

I've owned several Tecsuns, and none seemed to have any alignment problem. The BCL-2000 drifts as we all know, but the PL-350 isn't analog so there's no drift.

Heard here well on 11845 at 1630. Apparently the jamming is coming from some localized source(s) in Harare itself, according to one reporter in Zimbabwe.

This is the one reason many posters use an alias and no e-mail address --
also to avoid harassment should some nut get offended by your posts.

>Also your FCC license number change. Perhaps I am showing my
> ignorance (most likely), but does your FCC number change as you progress
> to higher levels, did it expire and was reissued, or is your call sign a
> vanity sign?

Callsign allotment can be found at QRZ.com  http://www.qrz.com/index.html
Look under DETAILED INFORMATION then CODE to determine vanity calls etc.

P.S. QRZ now lists Ham e-mail addresses in picture form (jpg or bitmap) to
foil the spam-bots.

An amateur does not have to change calls as they upgrade.
One may first obtain a Tech license and receive a 2x3 sequential call sign.
e.g. KA#AAA
Should they upgrade to a higher license, they may elect to retain their
original call.

```

It has the switchable IF. I tried it, but the original setting has always been the best so far.

The only image I've received on it so far was where I was trying to receive WLW on 700 (150 miles away), and I have local stations on 680 (4 miles) and 710 (20 miles). The PL-350 separated the stations just fine, but it received an image on 700 from a local travel station on 1610 (less than 1 mile away) that's notoriously overmodulated. For some reason, every Tecsun I own picks up that travel station on 700 in that same spot.

Otherwise, I haven't heard any images, but I'm in a rural setting surrounded by mountains and with very few high-powered stations, so sensitivity is the most important factor for me in considering any type of radio. And the PL-350 seems to be a perfect choice.

China has been under the CCP's vicious rule for over half a century.
There are very few to zero individuals still alive in China who are even
remotely aware of its pre-CCP history - they have been brainwashed.
Very few individuals in any sense of power know anything else but
CCP burocracy let alone some type of organized civil war.

The argument that the CCP provides "stability" and the people would
succumb to civil warfare is warn out CCP propaganda.  If anything, a
collapse of the CCP form of government would bring the nation together
to rebuild a more Democratic form of government.

Chinese people are not ignorant pheasants like many seem to make them
out to be.  Take a look at your University and its graduate and PHD
students, especially in the math & sciences.  I willing to bet that a
significant percentage are Taiwanese or mainland Chinese.  Granted, a
large majority still live very poorly in the countryside.  But today, the
average urban citizen is fairly worldly considering the amount
of censorship in media.

Please review the circumstances that revolved around Tiananmen Square
in 1989 and please tell me if what you have seen there looked anything like
a civil war?  It wasn't even close and the military came out with blood all

over them.  This give credence to the propaganda about "stability" and its
irrelevence to China today.

> > > I think your hatred of the CCP has blinded you

> west if that stability were to be disrupted with love of the CCP.

You seem to have swallowed the CCP propaganda hook, line and sinker.
The CCP keeps spouting this same B.S. over and over again.  I guess
if it is repeated often enough people, like you, will believe it.  This
is a big insult to the Chinese people.  The Chinese people don't need the
CCP.  In fact the opposite is true!

> I
> doubt most westerners love the CCP, I sure don't. But it's the only
> thing holding the country together. Like I said, China has a long,
> bloody history of warlordism and civil war, and any collapse of the CCP

> might bring a return to the bad old days. This bad situation-a brutal dictatorship being the only thing keeping the world's most populous country from sliding into chaos-is exacerbated greatly by the fact that China now has virtually ALL of the world's industrial capacity. There is no more industrial base in America, Europe, Japan. It's all been moved to China.

I'm sorry old boy, but this is pure garbage and sounds very much like what is written in the CCP run newspapers in Beijing - I'm not joking. There are many able countries that will quikely and happilly "tool up" to fill American orders for product. Prices may rise but to what degree will be determined by the marketplace as it should. That assumes that there will be some kind of collapse of its manufacturing base. That is highly unlikely considering the involvement of western interests and western company presence.

> If China descends into chaos the rest of the world will go with it. Blame your beloved capitalists for being too willing to cozy up to a regime that could be toppled by a mass movement like Falun Gong and that allows massive pollution and 10 cent a day wages.

Ah ha! Now you are talking! Those big bad Capitalists again. LOL
I'll go on a political limb here and will tell you this much.
Had dear leader Nixon and Kissinger NOT reproached Deng Xiaoping to "open up", the USSR would still be in existence today. Why? Because the USSR would likely be profiting from China's growth all this time. Albeit not as robust.

Deng Xiaoping knew China had to open up to avoid an economic disaster that we now see in N.Korea. If the US wasn't economically friendly with China it would have looked elsewhere and anywhere to accomplish this economic goal. China would have solicited economic development from any CCP friendly country including our enemies. N.Korea is an example of this idea - selling missile technology (from China likely) to Pakistan, Iran and Syria. Money counterfeiting and drug trafficking to name a few. Hardly a comforting alternative to the west.

Nixon and Kissinger knew this and made a brilliant move by isolating the USSR.

*** The idea to engage China is a valid one. However, the moral and ethical degree to which this engagement has progressed by the Capitalists is now questionable in my opinion. *** I think that there is now some realization of this within the US House and Senate.

> fled into West Berlin right after the wall came down eventually went
> back home.

I would suspect that after a reunification on the peninsula the phenomenon
will
likely repeat itself there.  Unemployment will rise and the deficit will
rise.  It
will be a difficult time for the Koreans but not impossible. ref: Germany.

> I didn't say that another centralized dictatorship would take hold, I
> said that the country would descend into warlord rule and possibly civil
> war. There is a difference.

After a reconsiliation with the South I highly doubt there will be
widespread
civil unrest.  These people have been under Dear Leaders thumb for a very
long time and would have very little resources or even a will to pull it
off.

> But I don't think that it would trigger a western invasion of NK.

There won't be a "military" invasion.  There will likely be some kind of
Korean - Chinese - Japanese - Russian & US cooperation with UN
involvment and guidance.

> > Has it occured to you that whomever overthrows Kim Jong Il may well be
> > "friendly" with the South?
>
> You're assuming that a pro Western ruler replaces Kim. But I'm saying
> that no ruler may replace Kim, that NK would break up instead, and that
> would likely be much worse than a pro West regime in the North being
> toppled by the Chinese.

What I am saying is that there is some evidence of certain elements in the
N.Korean military which would like to remove Dear Leader.  These elements
seem to be aware of N.Korea's economic predicament and are more willing
to reproach the south with fewer conditions than Dear Leader impresses.
As I said earlier the Dear Leader is a proxy, puppet if you will, of China.
It is certainly clear.  As China has all the strings neccessary to "pull the
plug"
on Dear Leader but refuses to do so as evidenced in the latest "round of
talks".
This is clear indication of a certain level of resistance within the CCP
towards
a pro-South reunification outcome.

A reminder - recall the recent massive railroad station explosion which occured
within hours after the Dear Leaders return from Beijing.  The Dear Leader is afraid
to fly!  Should make you ponder.

> It's possible, but there would be enough loyalists to go ahead with the
> Bomb drop and force a US invasion.

In which case the US would have a green light - not something China wishes to
contend with I am sure you will agree.

> >  In any case, nuclear weapons aside, the Korean peninsular would become

Hi Guys,
I am thinking of putting my old Racal on Ebay but before I do I thought I would offer it for trade . I am looking for a solid state radio with digital display.
if anyone is interested email me.

Jimmi

Hi..

Rooting around in a bunch of old stuff looking for suitable things to put on ebay, I came across my ICF-SW77. It's about 10 years old, bought (in London) when I was working in Russia. Anyone have a rough idea what the going rate might be? I can't even remember how much it cost. It's in good condition & fully working. I seem to remember some sort of shoulder strap but that's gone. There is the small antenna-on-a-reel that clips onto the aerial, and the English pages of the manual (the other languages have been ripped out).

I also have the AN-102 Compact Active Antenna also.

Any info gratefully received.
Cap'n.

I'm talking about the medium of shortwave radio itself, not the individual stations. Look at how a medium like say XM Satellite Radio or Directv is set up and controlled vs how shortwave radio as a medium is uncontrolled. With XM or Directv the entity controls all access and controls what is broadcast. With shortwave, I can choose to listen to the BBC or to Voice of Korea. In China, the Chinese can choose to listen to CNR or to Radio Free Asia (albeit secretly). See what I mean?

Us webtv users do not get viruses like computers get,no hard drive,thus cannot download any computer viruses with webtv.We do get spam and junk mails though.It is possible to forward an attatchement in an email from webtv to computer users but I have never (to my knowledge anyway) done anything like that before and I have been useing webtv since October 1999.There is a website (I forget which one right now) where I can send websites/URL's to and find if it has a computer virus in it before or if

I want to forward a website to computer users.Webtv and computers
compliment each other.I use webtv and I also use my computer.Both have
advantages and both have disadvantages.

It's an auction. People bid on items placed there. Whoever bids the highest
by time the auction ends gets the item. Understand now?

Does it seem like there's little reason to buy every portable that comes out, and end up with 30 radios when you only use a couple? I have one tabletop (Yaesu FRG-8800) and one portable (Degen 1102) and that's enough for me. I haven't been using the Degen much lately though since it doesn't perform well under these poor reception conditions that we've been having lately. Some of you seem to buy every latest portable that comes out. First off, I don't have that kind of money and second it seems like an awful waste of money to buy radios that you don't end up using just to try them out.

http://www.conknet.com/~b_mobile/NoiseStuff.html
This link should clarify things.

In summary, the theoretical value of noise is: [E^2 - tRkTB] where :

E is the RMS value of noise,
R is in ohms
T is in absolute temperature,
B is the bandwidth in Hz
k is Boltzmans constant  (k = 1.38 x 10^-23 joules/degree K)

At room temperature (290 degrees K) with a 50 ohm system with a 1kHz bandwidth, this converts to a noise level
of -144dBm. 15dB excess noise from the environment converts to a level of (-144 + 15) or -129dBm. This translates to a level of slightly less than 0.1uV. This is the noise level that you might find in a very quiet rural area. In my area just north of Chicago, the excess noise is around 4uV at 30MHz, increasing to higher levels on the lower frequencies. At frequencies below 100MHz, the predominant noise is man-made noise and atmospheric noise. Above 100MHz, the noise density decreases sharply with galactic noise being the dominating factor. This is the reason that a receiver with a 12dB NF is acceptable for reception below 30MHz. When you listen to receivers that seem to be quieter than others on the same signal, this can be because of noise in the audio amplifier or because of excess phase noise in the LO (synthesizer). Excess phase noise manifests itself in a couple of ways; first of all, it can cause that "white noise" that is sometimes experiences on signals, but more often it is because of signal feedaround in the I.F. filter chain. The second way that excess phase noise manifests itself is by the rising of the system noise floor when tuning very close in frequency to a very strong adjacent signal.
Two ways that I know of to clean up this problem are: use a selective crystal filter (500Hz BW) at the Phase Detector's reference oscillator input in the synthesizer. The second way (mainly to improve close-in IP3) is to use a multi-pole filter with good shape factor as the roofing filter. The only problem here is when you use a multi-loop synthesizer to tune the minor loop at the 2nd LO frequency. The Racal 6790/GM addresses this problem by using a single loop Fractional N synthesizer. That is why they can get away

with using that (8 or 10-poles?) filter at the 45MHz 1st I.F.
As far as receiving higher frequencies, the benefit of a system NF of 2 to 3dB becomes apparent. There are GaAsFET devices that have a NF of a fraction of a dB,but those are more useful for EME communications, etc.
Anyway, I hope this clarifies things.

Pete

I agree Dogg. I occasionally use a Sony ICF-SW77 at home and an
ICF-7600GR when I'm traveling. Those are all the portables I need. (I
should confess that I have a tiny Grundig Mini-World 100PE tucked away
in a drawer, but its antenna is broken and so it would be hard to use
it now.) I love the SW77, even though I think it was overpriced.

Steve

It doesn't work that way.

I for example am in linear amplifiers. When I see an amp for sale at a bargain price, I buy it in the knowledge I can resell it and not lose any money, but I had the pleasure of using it.

What would you prefer, a few hundred dollars in bank, where once a month you get a piece of paper telling you h\you have X saved, or would you rather have some equipment and enjoy using it, with the knowledge that you can always "cash in" on selling a radio and not lose any money on it?

You only live once and money is there to be spent!

Depends on what kind of listening you want to do.  If you want to do serious DX'ing, I'd recommend the R-75.  I also recommend the R-75 for any kind of utility or ham listening.  The R-75 is not a bad receiver for program listening, but it is not ideal.  The stock unmodified am sync is not effective.  The disadvantage being the receiver doesn't give you the capability to minimize distortion due to signal fade.  A simple and inexpensive and reversible mod can be done on the receiver to greatly improve that problem.  The R8 has a sync detector that works well, but it does not do as much as the improved ssb selectable am sync on the R8b. The over all audio quality of an unmodified R-75 is not as good as the R8.  The R8 series is well known for having great audio.  Again, you can do a simple mod on the R-75 to spruce up the audio quality.

I've used both the R8 and the R-75.  I've found that the R-75s performance using ecss in ssb mode in combination with the Icom twin PBT made it the better receiver for dealing with very weak and messy signals.  Using the same antenna set up, I also found the R-75 to be the more sensative radio in practic, regardless of how close the written performance specs are on both the the radiosradios.  I'd choose the R-75 over the R8 any day for DX'ing or utility.

I have a modified R-75 with both the Kiwa sync mod and the audio mod.  I use it with an external speaker too. With those mods and en external speaker, I can honestly say that it is right up there now with the R8 for program listening.

In short with just two simple mods and an external speaker the R-75, can do what the R8 can do, but the R8 cant do what the R-75 can do in the way of ssb DX'ing and utility.

Michael

I've been looking for a reasonable priced remote, and they don't exist, unless they are totally trashed. The last one I saw was over $200, and it wasn't all that great. I saw some plans on how to make one, but I can't find them, not that I really need it, the 525 is hooked up to the PC anyway.

I agree with you too, Richard. I just think people are better off spending their money on tabletop sets, where the different capabilities of various sets are more pronounced and....well, they're just more *interesting* than portables.

Steve

Lets see who the tard is.
You answered to Dxass.
I answered to your reply to my post.
Now by a nice little turd and crawl back into Telamon's panties and do
her dirty work somewhere else!

Some folks enjoy trying out different radios.

Most radios seem to have a good resale value, so there is not much lost.

Hello, My name is Benji Mallicoat, I am a journalism student at San Jose State University. I am writing a research paper on the origins of radio in the United States. The focus of the paper is specifically regarding the locations of the first radio stations. Any information you can give me will be extremely helpful, and greatly appreciated. Thank you very much for your time and consideration.

Sincerely,

Benji Mallicoat

Hi Benji

"Broadcast entertainment really began in the USA in 1920. There, many hundreds of stations were soon in operation, swamping the airwaves. In Britain, the approach was more cautious. Experimental stations were tried at the Marconi site at Chelmsford, Essex, in 1920 and in 1922 at Writtle, a village nearby. This is the Writtle transmitter, callsign 2MT (see http://www.sciencemuseum.org.uk/exhibitions/2lo/111.asp ) "

Good luck with your research paper (any chance of a copy?) and let me know if you need more help.

Mike

Start using Google... a place to begin will be 'early radio'.

"Li Changchun" <LiChangchun@ccp.gov.cn> wrote in
news:1138u48mbm0ac67@corp.supernews.com:

True. I don't think that most people give the prevalence of propaganda
much thought. I'm always incredulous when some of my co-workers
unquestioningly accept mainstream news stories. Not that these stories
are untrue, sometimes they are, sometimes not, but even the frequency of
the airing of the stories and the tone in which the stories are presented
constitute propaganda.

Anti-Smoking propaganda campaigns are maddening. Any sensible person
would realize that smoking is seriously bad for your health, yet every
day, some new study is released showing that tropical fish raised in the
homes of smokers are more likely to have breast or prostate cancer than
those raised in non-smokers homes. (I am being facetious here).

Oddly enough, because the perceived outcome of the anti-smoking campaigns
is good, the campaign itself is not perceived as propaganda, yet it is.

Well, you caught a typo, I guess that does make you smarter then the

rest. I guess this gives you the right to belittle the handicapped also?
I see that you have upset somebody so bad that they posted your address
and phone number, and your best comeback was to threaten then with
"It's pretty hard to outrun a shotgun or an SKS, or even a 45 pistol as
well.
By the way, my neighbours are all heavily armed as well. "

You carry all those weapons with you all the time?
By the way you spelled neighbors wrong! Correct your own spelling before
you make fun of somebody else's.
I'm done listening to you turd, you are such a bore! You did show your
ignorance by answering to DXass.

I'd head for a good library & do some basic research ;

I shudder at the idea of a Journalist using the internet for
" Basic research ";

- Maybe the instructor is look ing to weed out the truly uninspired and
lazy

I did some flying in some fixed wing Aircraft and Helicopters when I was
in the Army,but I didn't like it.(the flying,that is) So,I guess I am
afraid of flying too.My feet are meant for staying on the ground.

BBC announced cuts in all but morning and evening
broadcasts (in English) to Central and South America.
Might this have to do with the closing of the
Antiqua relay?

Perhaps you are already aware of Charles Herrold, who operated one
of the first radio stations (at the corner of First and San Fernando
Streets -- just a few blocks away from San Jose State University) in
the very early 1900s.

                    http://www.charlesherrold.org/

< Snip >

No it depends on whether you know what you are doing. I'm fed up with
people advising people new to the hobby that this is the radio to get.
This is the wrong radio for them to get unless they have the aptitude
for it. Unless you want to kill the hobby stop recommending this radio
to newbies please.

You can make exceptions for people that are technicians or engineers
that have an understanding of what the radio can do or be modified to do
or are inclined to modify it themselves.
```

I keep seeing people new to hobby sell the R75 they picked up and leave the hobby.

This is what someone else posted. I assume that 5975 is from Antigua and
9525 is from Okeechobee, FL at least it is according to Passport. If
this is true maybe the cuts are not in effect yet.

I like my AOR7030+ and I'm a Drake owner and a Ten-Tec owner.

The cuts/changes are to begin March 27. Not sure at this time whether Antigua will be affected right away or if some transmission time will be shifted later on.

See
http://www.bbc.co.uk/portuguese/institutional/rebroadcasters.shtml
for the list of FM, Satellite and AM and, at the very end, current
short wave frequencies.
That's all going, but what are they doing with new transmitters in
Chile and elsewhere?
Delano, Greenville? Ascension?  All have back signals that may be
heard in North America.
Portuguese still to lusophonic Africa.

I presume that China and evangels will move in to the missing
frequencies as they signed new deals with VT-Merlin for Meyerton
and Chile to South America.

Jamming the airwaves seems to be picking up as a way to "handel" SW
broadcasts. It is even screwing up some of my listening on adjacent
channels. Scanning the bands there just seems to be more of it around
lately or it is just my perception of it.

Most of the jamming I hear is either the music jammer blocking
broadcasts to Asia or bubble jamming of spanish / english broadcasts to
the Americas.

Well maybe some of them turn around and sell the old ones, I don't know. I have ended up with a collection of radios over the years, but the only portables I still have are my Sony 2010, which I only use while away from home or listening on the patio, and an MCE analog AM-only portable which I bought at a hamfest for $1. I hang onto it since I think it's neat because all the controls are labeled in German, and on front it is called a 9 Band Weltempfanger. Plus, it is a cheap portable SWBC receiver that I'm not really afraid to lose. I also have an old Realistic Patrolman-9 which was given to me, and I think it's a neat radio since it not only covers SW, but LW, MW, VHF, and UHF. It should be a fun radio to take camping this summer. I also used to own a Sony 7600, and sometimes wish I still had it. It was a really neat portable AM/SSB receiver.

It could be that many people who buy new portables have their own collection, too. I know if I had the money I wouldn't mind buying all sorts of portables. I'd probably play with each one every so often, while keeping the others on display like my own personal museum.

But, since I haven't won the lottery and the Nigerians STILL won't send me the 12 million dollars they promised, I'll just have to be satisfied with the radios I do have. And if I ever get tired of any of them, I'll sell them.

You are a prime target for disinformation. Always assume you are being lied to, especially by those whom you are injclined to trust the most.

Paranoia is awareness.

There's a sign on that street corner commemorating Herrold, but it doesn't give much info. Fry's in Sunnyvale has on display pictures chronicling electronics history, including one of Herrold's radio equipment and one of his house, which was a small bungalow with a massive telescope-complete with retractable dome-on the roof. Very funny looking.

To hell! with those Illegal aliens! If I had my way,they would never
make it to the border! Planting and harvesting crops,jobs Americans
won't do,eh? We have machinery and technology that can do all of those
jobs and more.

Actually I think that's Creole rather than French itself.

Most entertainment was not designed for lasting value. Dickens was paid by the word to pad stories and draw them out to increase circulation, and Shakespeare was considered "vulgar" by the ruling classes. They both provided entertainments, and, in retrospect, we found them enduring as well. Much of the best writing of that period is totally forgotten and irrelevant. Don't be so hasty to dismiss the simple act of providing enjoyment and entertainment.

This sounds like Urban legend. KFI was founded by the leading Cadillac and
Packard dealer of LA, and was anything but a farm station save a brief
period early int he morning. I thought the calls, like many early ones, were
assigned in order.

Yes, I have the info now, we have diff frqs in N Amer. I did talk to a guy
who used them between two cars driving through Norway, and I'm guessing
they didn't interfere with anyone so no trouble.  We'll check into PMR when
we get there.  Cell phone looks prohibitively expensive to take the local
cell phone over (it will work over there). I can roam through Canada and
most of the USA as if local with no additional charges but not over there.

This will allow me to avoid women's clothing stores etc.

Australia is good on 21,740 today at 22:00 UTC. S6 level on RX340 with a little noise in the background and occasional fading but no distortion with the sync and I don't miss any content because of it. This signal usually improves in quality throughout the broadcast. The folded dipole is at its 2X frequency so until I make or buy a distribution amp I'll listen to the 13 meter band one radio at a time.

Hardly, in case of a China banking collapse financial arrangements can
always be made.
We are talking about paper after all.  Not gold bullion.  Perhaps WalMart
stock
```

will collapse but the $US always rallys in times of serious worldwide calamity.
The Chinese $Yuan may become worthless.

> As for N Korea, they are so
> disconnected from the world, no-one would notice except for those of us who

You are seriously mistaken.  If the hermit kingdom collapses there will be a human
tragedy on the peninsula.  The economic costs to S.Korea will be worse than
what Germany has had to endure since the fall of the Berlin wall.  Assuming
hoards of refugees begin to cross the DMZ.  Which is very likely.

Then there is the geo-political question.  Will China invade N.Korea and claim
its territory for repayment of decades of economic support? Or will China allow
a free and Democratic state to prosper on its economically suffering Northeast
border with the peninsula?  If so it would be a first as well as a strategic blow
to the Communist regime in Beijing.

China historically prefers weak, non-threatening regimes as neighbors and works
to maintain its supremacy over all its immediate neighbors.

Korean history extends into what is now Northeast China.  There are Korean
claims to these lands.  China is well aware of these claims and has summarily
rewrote its history books in an attempt to erase these claims.

The best scenario for the West would be if one collapses immediately
followed by the other.  Neither regime would stand which is why China
will not pressure N.Korea in regard to nuclear negotiations.  China can
very easily resolve the nuclear issue since all of N.Korea's energy comes
from China.  Simply turn off a spigot and flick the big switch and Kim Jong Il
is complete history.

"Li Changchun" <LiChangchun@ccp.gov.cn> wrote in
news:1136k2le8blk463@corp.supernews.com:

Offered as an aside, and not directed to your post (response) specifically, the following:

So far as I can tell, any country in recent history that has been exposed to the U.S. Air Force or U.S. Navy has come away from the dealing quite damaged. I can see the struggle that the U.S. is having in its ground conflict in Iraq, perhaps a different story.

We have gone through the "Mother of All Wars" scenario with the Mideast, and I do not believe that bombastic speech is going to help their situation concerning how seriously the world takes them.

Improvements in technology even since the mid 80s, and the current administration in the U.S. would certainly bode catastrophe for any opponent to the U.S. Air Force or U.S. Navy.

Oh, and by the by, when was the U.S. Navy defeated the first time?

Ever since an earlier post addressing this topic, I have had my Icom R-75 monitoring 6.955 MHz AM. The station is just starting to be intelligible here in Pittsburgh Pennsylvania.

Signal level S7 to S9, with a lot of background noise.

They appear to be playing music.

Oh well, as I was writing this, they again faded into obscurity, you can still hear them but nothing can be understood.

Regards.

Dr. Artaud

The Chinese are currently financing the US government. They hold a BIG
chunk of US debt. The West has shifted all its manufacturing facilities
to China so in the event of a China collapse there might be serious
shortages of most goods. I think your hatred of the CCP has blinded you
to the serious implications of a potential China collapse.

The DMZ is the most fortified border on earth. The North Koreans have
gone to great lengths to make sure that nobody crosses. I'm not so sure
that hordes of refugees will be flooding across.

I don't think you'd see a democracy spring up in NK. They've had 60
years of harsh Stalinist rule. You'd more likely see a situation like in
Afghanistan before the Taliban, with a lot of local party bosses
becoming warlords and establishing fiefdoms. China may send troops to
ensure "stability". But I don't think China will invade South Korea. The
US is a major trading partner for China; the CCP is NOT going to start a

nuclear war with the US in the name of Communism.

> is complete history.

If China thinks they can keep Kim from nuking Seoul, they may be sadly
mistaken. Unlike the massive bureaucracy that Communism has become in
China, in NK Kim is the end all and be all of government. He is totally
cut off from the rest of the world and lives in a dream world and is
much more likely to start a war with the US to "free" SK. If the US is
forced to invade NK because of Kim, the US will likely reach a quid pro
quo with the Chinese, keeping the Yalu River as the boundary between US
and Chinese troops. The mutual trade between China and the US means that
all out war between the two is not likely, even if China invades Taiwan.
The US establishment is not willing to have a nuclear war over Taiwan or
Korea.

I had this argument with a buyer a few months ago.  Yes, a person CAN end an auction, even if it has bids on it.

1) if the item becomes unavailable (i.e. broken or otherwise)
2) if the seller has decided not to sell the item (this actually goes with 1) above)
3) to sell the item to the highest current bidder

Yes, it's all there in the rules.

Don't know about the government per se, but the economies of several states (CA, OR, WA, ID, NM, AZ, TX) count on them for sure.  Without the migrant workers, many crops would never even be planted, let  alone harvested, because most Americans simply won't do those jobs for any wage. I used to work the fields (strawberries, sugar beets, potatoes) when I was young, and was almost universally the only caucasian person there. Most were Mexicans, some were Native Americans. Some Afro-Americans depending on the state, but not many.

This is not a moral assertion on whether it's RIGHT or WRONG.. only an assertion that it is fact.

My reception of the  21,740 segment did not improve toward the end of
the broadcast. Signal level was about the same from beginning to end.

Listening to RA now on 17,795 and 17,715 and also NZ still on 17,675
all about the same signal quality with a signal strength of S6 average.
NZ is better now just because the jamming one channel below and and
another strong station above are gone.

```

A couple of weeks ago, I discovered a new radio on Liypn's ebay store, the Tecsun PL-350. It looked a lot like the PL-550, which wasn't really that good a performer, so I almost passed on it. But I did some research and I found out that the new radio had a bunch of good reviews, but they were all in Chinese. I used the Google translator and I was able to find out that people really liked it. So I went ahead and ordered one from Liypn.

I have to say that I'm pleasantly surprised. So much that I find that it beats my DE1103 in nearly every category. That's quite a statement, but the more I play with it, the more impressed I become.

Check out the yahoo group http://groups.yahoo.com/group/pl350/ and you'll see more about the radio.

And for anyone wanting to buy one, the eBay item number is 5755772476.

> to China so in the event of a China collapse there might be serious
> shortages of most goods.
>

What you are likely to see in China is the collapse of their banks, which are already insolvent and technically bankrupt, and the disentigration of the CCP.
Neither of which will likely spell the end of their manufacturing base. In the very short term there may be disruptions but it would quickly recover and without the CCPoverhead possibly become much more robust.

> I think your hatred of the CCP has blinded you
> to the serious implications of a potential China collapse.

Your love of the CCP has seriously blinded you to a brutal muderous regime which is deeply hated by their own people.

> The DMZ is the most fortified border on earth. The North Koreans have
> gone to great lengths to make sure that nobody crosses. I'm not so sure
> that hordes of refugees will be flooding across.

If the N.Korean side of the DMZ becomes demilitarized because of a regime colapse you can be sure that waves of refugees will find a way across or around it. China would also see refugees.

> I don't think you'd see a democracy spring up in NK. They've had 60
> years of harsh Stalinist rule. You'd more likely see a situation like in
> Afghanistan before the Taliban, with a lot of local party bosses
> becoming warlords and establishing fiefdoms.

I see you are assuming that another brutal regime will take hold.
But that is not the scenario I am discussing. Besides another
regime would simply collapse as quikely as the old.

> China may send troops to
> ensure "stability".

Indeed, and that would be viewed as a very provactive move in Seoul
and the West.

> But I don't think China will invade South Korea. The
> US is a major trading partner for China; the CCP is NOT going to start a
> nuclear war with the US in the name of Communism.

Has it occured to you that whomever overthrows Kim Jong Il may well be "friendly" with the South?

> If China thinks they can keep Kim from nuking Seoul, they may be sadly mistaken. Unlike the massive bureaucracy that Communism has become in China, in NK Kim is the end all and be all of government. He is totally cut off from the rest of the world and lives in a dream world and is much more likely to start a war with the US to "free" SK. If the US is forced to invade NK because of Kim, the US will likely reach a quid pro quo with the Chinese, keeping the Yalu River as the boundary between US and Chinese troops. The mutual trade between China and the US means that all out war between the two is not likely, even if China invades Taiwan. The US establishment is not willing to have a nuclear war over Taiwan or Korea.

You make many assumptions here about many countries.  China is well known for saber rattling against Taiwan.  Taiwan businesses invest heavily in China as well.  The scenario of any nuclear exchange in the region is very remote. Regarding N.Korea, even if Kim Jong Il does indeed have a "couple" of nuclear tipped weapons, considering the latest intelligence and if his military is even slightly coherent", they would likely depose of him and refrain.

In any case, nuclear weapons aside, the Korean peninsular would become the immediate focus of attention in the West and Beijing and Seoul would have many urgent and pressing meetings to attend.

I have a PL-550 and I dont think that it is a bad performer.  I think it is a pretty good performer for sw.  You get images here and there, but for the most part, it is a good radio.  It has many nice features and the audio quality us outstanding for a portable.  The only place that it is really lacking is on medium wave.  Other then that, I like it a lot.

How does your new PL-350 do with image rejection and on medium wave ??? Is the audio quality as good as on the PL-550 ???

Michael

Get the R-75 with DSP. The old Drake's encoders go bad after a while. I have read about several people having to send them in to Drake for new ones. Now, while the R8 does have a optical encoder as opposed to the later models mechcanical, those go bad too.

If you're into SSB and DXing, get the R-75. If you program listen mostly, get the Drake. But I have no problem doing BCB on the R-75.

Remember, the R-75 has Twin PBT and filters you mix and match plus DSP and it's newer. Can't be beat for the money.

Good luck.

Lucky

I was looking at the Drake website and I noticed several intriguing developments.  I reported a couple of weeks ago that the R8 speaker was discontinued.

Now, there is no mention of the Sat. 800 on the website, you cannot buy an R8B directly from Drake anymore, and the R8B now has only "limited availability" from Drake dealers.

http://www.rldrake.com/swl/index.html

Is this Drake subtle way of saying that the R8B is riding off into the sunset in the near future?

You got it! One of the best I ever heard was between an older woman and
a young guy, both with the accents, and they went at it most of an
entire day. I kept thinking, well, that's it, and then there they would
go again. I shot Pepsi out my nose a couple of times listening to them
over the years..

The guy would threaten the woman to "Gut yah son up layke a trash feeish
and chop him up inta chum and catch a couple a shahks!!"
She would talk about "Er, ahh, yah balls wouldn't even make faih minnah
bait, thayre too goddamn smawwll!"

They threatned to burn each other's boats, families, "cahs", etc. It was
great. I wish I would have recorded it..

BDK

From what I can tell, the PL-350 seems to do a better job on MW than the
PL-550.

The PL-550 has incredibly rich sound for a portable, and it beats the PL-350
in that category.

I really loved the sound and feel of the PL-550, but 90% of my radio listening is MW, so I sold the PL-550 to a friend and he is very happy with it.

And since I no longer have the PL-550, then these comparisons are subject to how well I can remember the PL-550. That means that it's probably a better radio than I can remember.

Either way, I think your PL-550 is a very fine radio.

Looks more like 6973 for SSB but AM still better.

Yeah, I copy that.  Quite a bit of noise with it here in Michigan, but he and the music can be heard clearly - his signal is actually very steady.

Tony

You got it!
Yes, signal is strong and steady with some drifts but holds up well. I can't
make out the language he's speaking.
French or Arabic?????

Lucky

That's not 4.2 mil for the probes themselves, but to perform monitoring and data analysis. The probes will continue to transmit until their power is exhausted; it's a matter of someone listening, examining the data, and storing it. That is what would be shutdown. No one is going to fly out to beyond the solar system and shut down the probes or anything.

To be honest, I'm surprised that NASA was still devoting
money towards Voyager, since they had already succeeded
in their missions.

The more I think about it, the more concerned I am about the reference to the "limited availability" of the R8B on Drake's website. I really hope this isn't the beginning of the end of Drake receivers. That would really be depressing.

Possibly. But China has a tradition of warlord rule, and for much of its
history has been broken into feuding fiefdoms, despite the common
culture and language of the Chinese people. Then again, the same
situation persisted in Italy for a thousand years, and that country is
now stable and prosperous.

>
> > I think your hatred of the CCP has blinded you

> which is deeply hated by their own people.

You seem to make this same curious error over and over again, equating
any concern about China's stability and potential disruptions to the
west if that stability were to be disrupted with love of the CCP. I
doubt most westerners love the CCP, I sure don't. But it's the only
thing holding the country together. Like I said, China has a long,
bloody history of warlordism and civil war, and any collapse of the CCP
might bring a return to the bad old days. This bad situation-a brutal
dictatorship being the only thing keeping the world's most populous
country from sliding into chaos-is exacerbated greatly by the fact that
China now has virtually ALL of the world's industrial capacity. There is
no more industrial base in America, Europe, Japan. It's all been moved
to China. If China descends into chaos the rest of the world will go
with it. Blame your beloved capitalists for being too willing to cozy up
to a regime that could be toppled by a mass movement like Falun Gong and
that allows massive pollution and 10 cent a day wages.

Maybe to start with there would be a lot of North Koreans attempting to
cross, but it might die down after a while. There was no massive refugee
crisis when European Communism collapsed. Most of the East Germans who

fled into West Berlin right after the wall came down eventually went
back home.

I didn't say that another centralized dictatorship would take hold, I
said that the country would descend into warlord rule and possibly civil
war. There is a difference.
>
> > China may send troops to

You're assuming that a pro Western ruler replaces Kim. But I'm saying
that no ruler may replace Kim, that NK would break up instead, and that
would likely be much worse than a pro West regime in the North being
toppled by the Chinese.
>

It's possible, but there would be enough loyalists to go ahead with the
Bomb drop and force a US invasion.

This at least is true.

Hmmm,
I couldn't find it scheduled so I thought it was a pirate. Funny, I changed the title of the post from "Possible Pirate" to "Pirate"

Sorry guys I blew it.

Good music though!

Lucky

Two cost money to receive, and one begs for money twice a
year.  Neither broadcast between 1.7-30 MHz.

May be. But Neither ILG nor EIBI lists *any* station at any time on 6975. When I move to 6973, where Galehzahal is, I lose him - he's right on 6975 on my receiver. And they broadcast in Hebrew - that's not what he sounds like (could be, though). If it is Galezahal, it's a nice catch - 5kW from the Middle East! But without knowing for sure, I'm inclined to believe it is a pirate, for now.

Tony

Yeah - Mark Twain once said: "When I was 14 years old, I thought my father was the stupidest man on the face of the earth. And when I was 21, I was AMAZED at what my father had learned in only seven years!"

Tony

Steve:  The more I think about it, the more concerned I am about the
reference
to the "limited availability" of the R8B on Drake's website. I really
hope this isn't the beginning of the end of Drake receivers. That would

really be depressing.

mike0219116:

I totally agree.  I'm glad I bought one last year considering how
things are starting to look.  It's a fantastic radio.

Beginning to sound more like a conventional broadcaster now.
Several "pro sounding" announcer voices, one of them a woman, and what
seems to be a news broadcast.  I cannot make out the language, but it
*is* reminiscent of French, from what is intelligible.

Tony

I know. When I couldn't find it scheduled I changed the post from "Possible
Pirate" to "Pirate". At least the music is good and like you said it's a
nice catch even if it isn't a swashbuckler.

Lucky

They are small, and fall out and get lost.  Thin plastic tabs that hold
them in place may break off.  Lots of reasons.  Same reasons they seem
to disapper from remote controls.

Steve,
for the money, I'd much rather buy a AOR 7030+. The same guy that designed
the Lowe 150 designed the 7030. BTW, I hooked up my 150 last night and the
sound quality is just superb. Just a pleasure to listen to. But, yeah,
better to get the AOR for the money any day.

CLVRMNKY,
.
US Presidents are NOT Elected for Life [.]
.
The US Presidency is the 'only' Federal Elected Official
that is Term-Limited by Law.
.
There are "Candidates" for US President.
.
There is "The" US President {POTUS} [.] {The First Citizen}
.
There are 'former' US Presidents.  {While Alive}
[ After they leave the Elected Office of US President. ]
NOTE - Even Richard M. Nixon was a 'former' US President.
.
IMHO - Being Elected the US President does NOT make you
"A Royal" {The First Citizen} for Life.
.
FWIW - Once a 'former' US President is Dead; and is being referring
to during their Elected Term as POTUS; then the term "President"
would be Historically Correct.
.
just 'my' simple american citizen (blue collar) point of view ~ RHF
.
.

A lot of old farts can't stand the 7030 menus (deeply nested mind you)
or the lack of numerical entry, which is why some people still bought
the R8B even though the 7030+ is a bit better. Sure you get that IR
remote with the 7030, but I never warmed up to using it. I just use the
fast/slow button and tuning knob. The menus don't bug me, though once
in a while the radio sounds a bit odd and then I realize the PBS is
tweaked from the last time I used the radio. The Drake R8B has a button
for everything.

The nice thing about the 7030 is it is small enough to consider it
portable, but is of table top quality. [BTW, I saw a 7030 in Art Bell's
shack on that ABC UFO special.]

hjsjms@cs.com wrote:

> I don't think Drake pulling out of the SW receiver market has anything to do with the quality of the product.  Every review I've read gives their products high marks.  They are pulling out for the same reason so many other companies have stopped making SW receivers - declining demand.  Both hobbies, SWLing and Ham radio are gradually losing out to competition from the internet and other ways of communicating and getting information.  Consequently there is less demand for the asssociated hardware.

I think that demand for tabletops at least has declined to the point where used rigs can fill the need. There's still enough demand for portables as to support three or so Chinese makers (Degen, Tecsun, Kchibo, and a couple minor ones). I think this is primarily due to demand in parts of the world that don't have ready access to the internet, such as China and other Asian countries. The number of transmitters has gone down even in Latin America, which used to be a hotbed of SW. It seems to me that East Asian demand is what's driving shortwave right now. Once technology to censor the internet catches up, there may be renewed interest in SW as countries seek to block access to subversive web sites.
>
> Look around at the number of SWL and amateur radio retailers that have closed in the past decade.  The latest Passport to World Band Radio has advertisements for one principal radio manufacturer when is past years they had many.  Signs of change are unfortunately everywhere.

I think SW is dead for good in the West. Demand in the future will be in places like Asia and Africa where other means of governments reaching

```
their people, like TV and local radio (MW/FM/satellite) and even the
internet aren't practical or affordable.

Am I correct in thinking that these various defects were not disclosed
by the person you bought the radio from? If not, then I'd think about
what kind(s) of recourse you have against the seller. Did you pay for
it using Paypal? If so, there might be some sort of buyer protection
that applies. The defects you mention are serious enough that failure
to mention them would constitute fraud.

Steve

When they WERE supposed to be broadcasting to the U.S., the Singapore
relay (e.g. 9740) frequently came in better on the West Coast than the
listed broadcasts to the U.S., especially in the PST mornings.

Oh boy. Which one did you buy off Ebay, the 150 that gave away some Sony speakers with it??

As for question 1:
The tuning rate is slow on SSB mode and the sync modes. The tuning rate for the sync modes are purposely made to be slow to be able to find the "lock". The tuning step for those modes are 8khz or 1.6 khz per dial turn. Even slower for AML and AMU at .8Khz per revolution.

You can speed it up by turning the knob faster. It then becomes accelerated. Tuning rate is faster in AM and AMn. It's tune rate is 60Khz and 12khz per revolution.

So, yes it's slow rate is normal.

As for #2, I only have to press it once to change the mode. You mean say it's on AM, if you press the mode buttons, the display doesn't show the change in mode from just one press?? If it needs to be pressed several times, something is wrong. You have two mode buttons to go in opposite directions. You mean both buttons respond this way??

For #3. You can unscrew the front plastic plate to clean off the back and
remove any dust or particles. As for the scratch, try some cleaner that
"fills" cracks and scratches for glasses. It might work depedning on the
scratch. Be careful cleaning the back of the plate as all the printing is on
the back, not the front.

And for #4, Oh shit..... Get your money back.

Lucky

With the end of Drake shortwave tabletop radios, the question bears
asking again: is shortwave dead? How much longer till the only thing you
hear on HF is static and the occasional mil comm? I think that DXing, at
least, is dead-most people don't even bother QSLing anymore, and fewer
and fewer stations offer QSLs. It seems to me that most people just

don't enjoy the thrill of seeking out faraway stations on any medium, be it SW, TV, MW, FM, they just want to listen to their favorite stations. Ham radio is gradually dying off, as today's hams get old and die there's nobody replacing them. As for SW broadcasters, they seem to be cutting back their hours and frequencies, all except the kooks in the US. VOA is being terminated, DW has been cut back dramatically, the BBC has cut out some regions of the world and operates with reduced times to the rest, RN has suffered deep programming cuts. SW radio makers are going out of business or switching to other types of products. I give SW 20 years tops before nobody is listening anymore.

This appears to be normal. Also, there is about a 50mSec settling time for the synthesizer if you tune in the fast mode by several MHz.

>
> 2- the selection buttons on the bottom have to be pressed NUMEROUS times
> before the radio responds. Takes 10-12 fast pushes to change mode, tuning
> steps, fast or slow tuning etc.

These things can possibly be cleaned. I just replaced the mode switch on my unit. I believe that Digi-Key has the switch assemblies that you might need. I will find out the part number later this week. I used another switch assembly (same type, but square pushbutton) and used the keycap from the original switch. I did, however, use the new contacter and spring assembly. It takes about 15 minutes to change each switch. Make sure you have a hot soldering tool to do this one; the plated through holes have a tendency to suck the heat from low wattage irons.

>
> 3- There is a scratch on the display crystal (not the LCD, but the clear
> plastic overlay)

0.7 micron lens polishing compound will clean this up. Be advised, though,
that the crystal seems to have a matte finish so you might end up with
something more shiny than the original crystal.

>
> 4- The Volume control knob and shaft came out. I can no longer use it to

This control uses a collet type of knob.............this means that you must
first remove the cap from the knob assembly. Once this is done, there is a
Phillips type of screw that you must loosen. It would appear that somebody
tried to pull the knob off and removed the shaft in the process.

E-mail me directly if you really get stuck, and I will be glad to walk you
through some of the repair process. I just got through repairing and
aligning my own unit. It is a shame that too often, these things only come
up for sale after they no longer work properly. Don't worry...........your
unit can be restored fairly easily.

Pete

I look at it this way; did most tube buffs think SW was dead
when Hallicrafters and Hammarlund disappeared?  No.

And it isn't dead yet, either.  I think it a mistake to rule
out SW, just like some people ruled out AM when FM Stereo
came along.  There's a niche for SW, and while it doesn't
have the grab of the WW2 and post-war eras, it's still there.

SDANIE,
 .
Yes - RL Drake Company's other business is their NON HF Receiver
'business' and that may now be their current "Main Business".
 .
Butt What - I was attempting to talk-about was their remaining
HF Receiver "Business"; and where Drake was still making money
in that business; to at least keep a finger in that business;

even if it is a minor part of their current business.
 .
I think most Posters here would like to see RL Drake in the
HF Receiver Business (be it only Design and Development) in
some form or fashion.
 .
just my opinion ~ RHF
 .
 .

They were saying the same thing 20 + years ago. It hasn't happened yet.

The sky is falling... the sky is falling...

Dead????  That's too strong.  But it is on the far side of a bell
shaped growth curve.  Although the the hobby is fully mature, there is
still plenty to enjoy.  Just hold onto those high-end receivers 'cause
fewer companies are making 'em!

Good points all of them. Yes, I think if you have a favorite high-end
table top, hold onto it because there are only a few companies making
them any more. I'm not sure shortwave will prove to be a viable
alternative to the net in China. The governmental net controls are far
from perfect right now. I see a gradual loosening of controls on
society in general and the net in particular as China becomes more
secure in it's position as a major economic and political player.

You know Pete,

I'm wondering if the frequency really needs a sec to catch up. The frequency is actually changing in between the tuning rates. So you're not seeing those steps displayed but you can hear the difference.

I'm glad you can help this guy out Pete. I feel badly for him. Stinkin crooks on Ebay. I never pay for a radio without using a credit card. This way you have some kind of recourse with these bastards.

Lucky

The answer (which apparently needs to be repeated 1,00 times a year) is:

NO.

Have a good evening.

I sometimes use my Kenwood TS-450S and it works great. I use a G5RV with
it. I have an Icom 706MKII but haven't played with it on SW yet, I suspect
it's also excellent on the SW bands.

If you're worried about there being nothing at all on shortwave, then you should stop worrying immediately. SW represents a big chunk of the EM spectrum. There'll ALWAYS be someone looking to take advantage of that amount of bandwidth. You can trust me on this: someone will ALWAYS find a use for it.

Mind you, there is some possibility that we'll be fools enough to allow something like BPL to destroy broad swaths of the electromagnetic spectrum. In that case, all bets are off. However, setting aside the potential for such a disaster, someone will always be doing something on shortwave.

As for whether the programming and content on shortwave 20 years from now will be programming and content that interests you...well, that's another issue entirely.

It's very hard to envision what shortwave will be like in 20 years, but that's part of what's fascinating about it. I think the content you'll find on broadcast AM and FM, as well as TV and satellite will be pretty much the same sort of commercially driven crapola that you find now, with small variations in theme here and there. With shortwave, though, it's not so easy to predict. Shortwave, I think, is wide open and spacious, like a frontier. I for one can't wait to see where it goes.

Steve

You've got a good point there,
Lucky..................................instead of synthesizer settling
time, he is talking about an apparent latency with the display. I understand
what you mean.
I feel sorry for this fellow, too. It's a shame that some of these "mint
condition" things hit the market at the prices that they do.
It could be possible that the seller didn't know the actual condition of the
unit, but the broken volume control? I don't think so. The wear on the
switches is normal, but they aren't a big deal to replace.............still,
I understand the seller's disappointment.

Pete

All this talk about such a sad day, the R-8B now discontinued.  I say: good riddance!

The death of the R-8B was a slow and painful one.  The price crept up to $1500 and it lagged behind the DSP technology of the last five to ten years.
It's platform was based on the R-8 designed around 1990.  It was almost a joke that such an expensive radio had a cheasey plastic tuning knob with no "feel" whatsoever.
The radio was built like a Muntz TV set, lacking adequate shielding.  It's

RF front-end was overloaded with a mulititude of internal birdies. My R-8B had a hunk of printed circuit board crudely cut and mounted behind the display board....a very cheap and ineffective effort at shielding. Drake service and its service manager Bob Frost were in a total state of denial when I complained about the internal birdies, some hovering at S-9 in the MW Band.

I dumped my R-8A and 8B on ebay years ago. I would have loved to keep them, but they just were not up to the standards of my (keeper) Japanese sets.

I am keeping a Drake R-8 (the original) as the best example of the series: no birdies, no sync hiss, a real metal knob......

One other point... Drake never made an R-8, an R-8A or an R-8B.

If you have ever looked at the front of any one of those sets you'd soon be able to see that they are the R8, R8A and R8B.

You know, I'm amazed on how well the double lock works on this radio. I was
getting bad fading on the BBC on 5975 till I caught the lock on it.

Yes the R-75 is right up there in sensitivty.

Lucky

Didja notice that there seem to be quite a few different people asking this question here?  I wonder if some college professor or high school teacher gave a homework assignment...

Geez, this is depressing.  I saw this comming but I guess I was in
denial to an extent.

I bought a new one from Universal last year and I love it.  It's a
fantastic radio.

I've got a JRC NRD-545, but it mostly collects dust while my R8B gets
most of the use in my shack.

I can't believe this.  On the day we loose the R8B the long fabled Sat.
900/E1 actually gets a real ETA (that includes BOTH a day and a month)
and a price tag.

It looks tempting, but I'm not about to be a beta tester for the E1
considering all of the trouble they had getting the Sat. 800 off the
ground.

Hi,

I'm looking for a working Datong FL-3 (or FL-2) audio filter.
Anybody upgraded to DSP and care to part with their old filter for a reasonable price?

Contact: sholto[removethis]@adelphia.net

I don't think it's any mean trick to make a new/replacement battery cover.Hey,it's a plastic world nowdays.Just find a piece of scrap plastic and hacksaw it to size so it will fit properly and there ya go!

You could even start up your own battery cover replacements factory.
cuhulin

> too).

That "deliberate confusion" as practised by some just might be a means of protection because apparently Mary Ann may try to cause trouble for Usenet posters in *real life*, e.g. contacting their employers, local law enforcement officials, schools, ISP's, etc.  This is apparently in response to some who have simply disagreed with her on technical matters or because they have referred to her by one of her common Usenet nicknames...

> Maryanne is an avid SWL from Atlanta who contributes regularly to various
> online and print publications centered around Shortwave.  Most notably she
> forwards press releases and the schedule of Voice Of Russia on a regular
> basis to the groups and clubs she participates in.  You can find reports
> from her in Monitoring Times.

*Big* deal...is this why she has apparently claimed to be a "journalist"...???

[IIRC she has also posted to BBC, _New York Times_, etc. message boards, then she has apparently claimed that these outlets have "published" her "articles"...when she was going on once about articles she'd claimed she'd written for "internet publications" and I asked her for URL's/cites there was no response from her...go figure.  Does she not realize that when folks make such claims in public that others just *might* check google or nexis/lexis to corroborate their claims...???]

> The immature males who can't accept a woman as a DX'er in their hobby ridicule and put her down because she can be quite obnoxious at times, is tall for a woman, horrendously top-heavy and preferred to wear crew cuts.

Has naught to do with her hobbies, people object to her behaviour on Usenet...

[And she should know that by posting her pictures, "pageant" awards, personal details, etc. on public forums and the internet that some of her detractors just *might* use this info to ridicule her.  'Tis a common tactic on Usenet, even a child has no trouble understanding the concept.]

> Under that exterior, which has shed a large quantity of poundage, and added an inch or two of head hair in the last year, she has a heart of gold.

<cough/>

> I used to rag on her until one night when a bunch of us got into a chat room and started discussing the bad things we said about her. After a few minutes of laughing it hit us that we were all being jerks and none of us have said anything derogatory about her since.  Gee, I think I've done penance.

Why bother?  Her behaviours on Usenet haven't changed one bit from what I can see...

[my above comments are simply my personal opinions..."YMMV" of course...]

I forgot to mention that one of my reasons for the question was that I was going to look at an older Kenwood TS-2000 that followed me home. Afer struggling with all its functions I finally got it to do what I wanted, that is after studying the manual, you can't leave without it, hacking doesn't cut it. Now to check it out.

First...thank you Lucky, Steve and Pete for taking the time to respond to my plea for help !!

To answer some of the questions: Unfortunately I did not bid on the set with the speakers as I knew it would be beyond my limit :{ I can turn the tuning knob 6 or 7 times with no change in the frequency display I may have been responsible for the fiasco with the volume control shaft, but I must admit that it took VERY little in the way of pulling!

Insurance on this item was not an option The auction did not offer a picture of the radio, but it wouldn't have mattered much as the defects are internal. The scratch on the display is something I can live with, but I believe it should have been mentioned.

Here is the link:

http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&rd=1&item=5756065429&ssPageName=STRK:MEWN:IT

Anyway it looks as though I am going to be on a hunt for the parts I need and Pete has, most generously, offered to help when I need it.

Thanks again to all.

anyway....thanks to you all....
i bought a new icom r-75 on ebay for a great price and already ordered all the kiwa mods. craig also gave me a deal here as well. when i told my wife i wanted to bid on the r8 too, well, you know....so i got the whole thing for $500usd.

in the end i wanted the adaptive dsp on-board. i know the r-75  IF fltr(s) and adj chnl performance are not as good as the r8 and the r-75 sync det sucks without the kiwa pll loop filter mod. the sensitivity specs are damn close and only slightly better than my r-1000 which i have decided to keep.

it sounds like dxace and others have owned both, and i probably screwed up big time...someday, i hope to get an r8b and compare station by station....but i'm sure they're right...

what is wild is that there are so many subjective and definitive
comments when performance parameters like
selectivity/sensitivity/bandwidth/attack times/etc...are matters of
documented performance. you'd think there would be some clear criteria
based on the specs as the receviers have become more
sophisticated....not so....

thnx again...for those dedicated to the r8, chalk it up to stupidity
on my part and you already know i'm gonna regret it...for those who
favor the r-75, chalk it up to slick marketing...after the kiwa mods,
i've read nothing but glowing comments.

I really like the 756 PRO I bought used a few weeks ago. The MW has a
bit of attenuation....but that is ok except for weak signal daytime use.

I think they are a real bargain at around  $1100 - $1200. No SYNCRO AM
however. I think the 746 PRO does have SYCRO AM though.

Probably the best AM DX receiver even today is the R-390 made by Collins or Hammarlund. Hollow state, an alignment nightmare, but the best receiver I have ever used. DSP is just another way of doing things, and not, in every case, the best.

Believe me this problem drove me crazy for a while.  My QTH is essentially "bathed" in the FM rf from 3 100 kW FM towers that are within a 6 mile radius and line of sight with the house. This problem seems to only occur in receivers with a 45MHz 1st IF.  My R72 has a 70MHz 1st IF and no problem at all. My previous Lowe HF-225 had the problem as does the FRG-100. I've literally spent days on and off working on this FM "bleed thru" problem and it seems to be associated strongly with the fact that the FRG's power connector has its ground (minus) pin going thru the metal rear panel to the pc board ground trace as opposed to connecting directly to the rear metal panel. This pc ground connection point is just about 1.5 cm from the 1st mixer ground area and I suspect this is the problem.  The new power connector I added greatly attenuates the pickup even without the pi filter.  I added it anyway and it helped additionally but not as much as the ground entry change.  I also sanded the solder mask away from the pc board to chassis ground connection under the corner mounting screw in this area and solder plated it.  This also helped. Unfortunately the external speaker and low level audio output jacks are grounded the same way and inject the FM crap also if you use these connections.  I agree it's a common mode problem but once the signal is past the chassis barrier it more than likely become partially translated to differential mode noise and permeates the pc board ground with fractional microvolt levels, just enough to cause trouble in that first high gain mixer!

This is the kind of stuff that makes me hate electronics despite having worked in it for 30 years!

Frank

Duct Tape the batteries in.Which reminds me,I am going to the Home Depot store tomorrow for house paint and other supplies and I need to buy a roll of Duct Tape so I can Duct Tape my broom to one end of my long aluminum telescoping handle and use some warm water with bleach and detergent and get that mildew off of my house before I start painting.I will then hose off my house with my water hose after I demildew it and then I will Duct Tape a paint roller to my long aluminum telescoping handle and paint my house.I won't even need to get on my roof,I can reach those high up areas standing flat footed on the ground.A man needs only two tools in life.If it moves and it shouldn't,use the Duct Tape.If it doesn't move and it should,use the WD-40.

They break or get lost easily. My Degen 1102 has a battery cover that's
attached to the radio by a hinge-slide it out and lift it up, less
potential for breakage. Of course, what one should do if it DOES break
is unclear.

I'm relatively new to the hobby. I think you could make the case that shortwave listening is on the decline in the US (as is shortwave broadcasting to the US). But in many parts of the world, shortwave is the only way to receive international news and content. Shortwave is also a huge way for third world countries to keep their populations informed. So there will always be something to listen to, for many years to come.

> The death of the R-8B was a slow and painful one.  The price crept up to $1500 and it lagged behind the DSP technology of the last five to ten years. It's platform was based on the R-8 designed around 1990.  It was almost a joke that such an expensive radio had a cheasey plastic tuning knob with no "feel" whatsoever.
> The radio was built like a Muntz TV set, lacking adequate shielding.  It's RF front-end was overloaded with a mulititude of internal birdies.  My R-8B had a hunk of printed circuit board crudely cut and mounted behind the display board....a very cheap and ineffective effort at shielding.  Drake service and its service manager Bob Frost were in a total state of denial when I complained about the internal birdies, some hovering at S-9 in the MW Band.
>
> I dumped my R-8A and 8B on ebay years ago.  I would have loved to keep them, but they just were not up to the standards of my (keeper) Japanese sets.
>
> I am keeping a Drake R-8 (the original) as the best example of the series: no birdies, no sync hiss, a real metal knob......

Apparently tabletops have been a no profit part of the business for a while. The best were built in the 1980s. (Of course, one could say that the true best ones were from the golden era of tubes, but I'm talking about modern, digitalized ones.) Then starting about 10 years ago the quality of both design and build started slipping. I figure it's around this time that demand dried up. I suspect that Drake has been trying to prop up a major loss in tabletops by skimping on design and build quality, keeping them going for old timers' sake. They simply couldn't do it anymore. From what I've read, Yaesu is doing the same thing-their current set is far below the Frog 7700 and 8800 (I own an 8800 and am very happy with it). I suspect that Yaesu will pull the plug on tabletops within the next couple years, and that AOR will once again pull the 7030 from the US market. When that happens, expect tabletop prices on ebay to soar.

The only thing that will "loosen" anything in China is when the CCP is hung
up on the rafters.

You may have a defective encoder- never seent his with the 4 150's I have owned, but it could happen.

As Pete mentioned, this is a collett knob- attempts to pull it off will ruin the pot.

One other thing to watch out for - do NOT use non rechargeable batteries AND the  plug in power supply- this will cook the alkalines and cause them to leak. Of the 4 RX I have had, only my current one has a pristine battery box.

And they are now done at one sitting, just like filling a cavity. My dentist calls it the best advance in dental treatment in years.  I've had 2 - and it is just like getting a simple cavity filled - just takes longer.  The "Chamber of Horrors" days of root canal are gone.

Tony

www.ettore.com  My aluminum telescoping pole (it's made in China,so the

label on it says) telescopes from 8 feet to 16 feet.I bought it at the
Home Depot store about a year ago and it has a plastic thingy on one end
of it so I can screw the handle of a paint roller on there.Now,if I can
find a scrub brush thingy at the Home Depot store tomorrow I won't need
to use any Duct Tape at all.I just now remembered something,I do own two
wide push brooms that have the handles that screw into the push brooms
and I also have a push broom that has the handle screwed into it and it
has a narrow broom on it because I once found that one at a junkyard
years ago and I keep it in my raggity old 1978 Dodge (Al Bundy) van for
when I want to sweep out my van.I will just remove the handle on that
push broom and screw the push broom on to the plastic thingy on my
Ettore aluminum telescoping pole and I will be all set to demildew my
old house.Good thinking,eh?
cuhulin

I'll have to echo John's and Ken's sentiments on this one. I have a
friend who lives close by and we have compared the 756 Pro II with
several high end receivers. Other than some attenuation on mw and lw,
it is superb as a sw receiver. To my ear, the RX-340 sounds better, but
the 756 is as good in pulling in the tough signals. Of course, many
will not spend the money for a transceiver if they do not have an
amateur license, but many will. The colorful display is something to
see. Lots of information in that display!

Having owned many, many Drake receivers over the years, the news about
Drake getting out of the receiver business is not good news. But, we
should have known it was coming, shortwave receivers are but a drop in
the bucket of the electronics business.

running dogg <run@ning.dog> wrote in news:42362bd9$1_2@127.0.0.1:

Visit the Yaesu homepage and look at the current offerings. The FRG-100 is no longer listed. I do believe that I have seen articles discussing the discontinuation of this superb receiver.

Can you say Palstar? Hopefully they will continue their fine R30 and Icom will continue the R-75, but who knows. Too many radios are being discontinued at nearly the same time.

Fortunately, HAM transceivers allow the same reception capabilities and offers transmission for those properly licensed. I don't believe that HAM transceivers are going anywhere soon, so there will be an abundance of superlative tabletop models for SWLing for years to come at the same price of Shortwave only tabletops.

For example, the Yaesu FT-840 transceiver. This is a fine (ahem, according to Yaesu, entry level or good as a "second" transceiver. I find it perfect in itself, no need for all the bells and whistles) radio, though I had to buy the AM filter separately, without it AM reception filtering was far too narrow.

EHam Reviews of the Yaesu FT-840:
http://www.eham.net/reviews/detail/129

EHam HF Transceivers reviews list:
http://www.eham.net/reviews/products/14

http://www.universal-radio.com/catalog/hamhf.html

Oh, and by the by, some of the HAM transceivers are portable, not quite tabletop, definitely not handheld.
http://www.universal-radio.com/catalog/hamhf/1857.html
http://www.universal-radio.com/catalog/hamhf/1897.html
and others, these are just the ones that came to mine.

""Tag Line Sent In Of The Week, Month, Whatever...
"I am confused. I thought that streaming internet audio and satellite radio was available everywhere and at anytime. Isn't real radio simply obsolete....like smoke signals. I am so confused." re: Singapore: 6,000 Radio Sets Collected For Tsunami Victims." "

You know that you've been living in a civilized nation for too long when you are capable of making an asinine statement as above. Yes Virginia, not every nitwit in the world is carrying a laptop computer, an IPOD, or whatever. Sheesh. These people imagine the world's poor people buying computers, subscribing to satellite services, and maintaining ISP connections. All the while looking for the bodies of their deceased relatives and friends.  Common folks, there are more than 6,000,000,000 people on this planet, not everyone lives like you. Most live in squalid conditions, the possession of a radio to hear local and worldly events and music is probably quite a pleasure.

And don't believe that the desire to go to the digital modes is for your pleasure. Think about it, the satellite services will ultimately be controlled by the Government and, sooner or later, once your hooked, by the advertisers. Shortwave is a thorn in the side of most Governments, since other countries, even on a modest budgets, can get the word out.

Satellites have a footprint, you need to be within that footprint to receive the broadcasts (more or less, I realize that part of the footprint is the intended reception area, i.e. the supported area)

If a show displeases the government covered by the footprint, and the government has the authority, they will simply order the show removed from the satellite. The U.S. has cancelled an Iranian broadcast to America, labeling it "intellectual terror". Easy enough. You no longer get to make up your own minds, you listen to what the Government wants you to hear.

Perhaps more utility listening, more DXing for those elusive signals, Pirates and Spies may be a way to bide your time while the shortwave broadcasters come and go (mostly go right now, but who knows in the long run).

Dr. Artaud.

I am sorry to hear of the demise of the R8B.  I have an Icom R-75, love it, and wouldn't part with it.  But I still think the Drake was the best receiver I ever had a chance to use, though briefly.  A wonderful machine.

Somewhere down the road, some company, likely an extant one, but perhaps a "new face", will come out with a receiver that will quickly become the new benchmark in the field.  It will be interesting to see what this future receiver will be like.  I honestly think that's inevitable.  Though the market for high-end receivers is getting smaller, it is not going to disappear anytime soon.

I also think - in fact I'm willing to bet on it - that when that receiver appears in the marketplace, if people thought the R8B was expensive . . .

Tony

R-390's were manufactured by Collins and Motorola.............PERIOD!

R-390A's were manufactured by Collins, Motorola, Capehart Corp.,
Stewart Warner Corp., Amelco, Inc., Teledyne Systems,
Teledyne/Imperial, Fowler Industries, Dittmore-Freimuth (built by EAC),
EAC (Electronics Assistance Corp.)which was a division of Hammarlund in
it's later years. But, Hammarlund "NEVER" built R-390's.

Just wanted to set the record straight.

K4JDP50@webtv.net (J P) wrote in news:13862-42350E48-75@storefull-3172.bay.webtv.net:

I get 30 or more spams a day, that is 30 that make it to the inbox at my ISP, which require me to sort and dispose of manually, and another 30 or so filtered by the ISP and placed into a spam folder for automatic deletion, and I don't publicize my e-mail address. My brother is incapable of stripping e-mail addresses before forwarding e-mail. When he sends me a forwarded e-mail, the first ten lines are the addresses of others. I suspect that this is how my e-mail address made it around.

Though spamcop.net and uce@ftc.gov sound impressive, with the amount of spam circulating, I suspect that they don't have much influence. Kind of like trying to stem a house fire with a urine stream.

I didn't inquire why you were interested in the locations of other posters, as it was commensurate with your interests at QRZ.com, though I appreciate the elucidation.

Regards.

Indeed it is Steve. Having owned the R8 and R8B (I passed on the R8A) and having owned an SPR-4, 2B, R4, R4A, R4B, R4C and R7 over the years, I can say without a doubt, R. L. Drake was a leader in manufacturing excellent receivers. I do think however, the R8B was the best of the line with reservations. That tuning knob and the lousy mechanical encoder turned me off. Of course, that didn't preclude me from many pleasurable hours sitting in front of that otherwise fine receiver. Having said that, it is a sad day for shortwave enthusiasts when you think that the Japanese manufacturers haven't ever produced one that didn't need agc, filter, synchronous detector and audio modifications to make it perform. I realize that we all had to modify our beloved hollow state receivers over the years, but the Japanese have led the free world in crappy audio, filters and agc's for decades. Shortwave receivers are but a minute drop in the bucket of electronics. If and when a manufacturer can sell shortwave receivers in the numbers such as dvd players, tv's etc., we will see this sort of thing happen.

Just my 2 cents.

Les
I see you have a R274C.  I have a R274D/FRR by Hallicrafters with what appears to be a factory for SSB with a set of three Collins mechancial filters and 24 tubes.  Ever hear or see of another as I'm looking for more info?
tnx

Wonder who got the highest or most recent serial number? That one will
be a collectors item. I suppose Drake kept a few too.

They go into a black hole under the bed along with single socks.

Probably thrift stores and pawn shops.  I got a Superadio II for $7 at "Cash Convertors," a sort of second hand store but they don't do loans like a pawn shop, and also a TRC-434 CB base station, which I bought for $30 Canadian and which went for $47 US (about $25 profit in Canadian $$).  If you were willing to pay an employee at such stores a % for leads, you could probably make a buiness out of it.

The Kiwa sync' mod' makes the R75 sync' comparable to that on the original R8 but not the R8B. The latter is how a really good sync' detector should work.

I wish MFJ Enterprises    www.MFJEnterprises.com   would start building shortwave radios and other kinds of radios too.I would certainly buy one or two,if I could afford it.I can't speak for the performance of their products because I don't own any of their products,,, yet.I am going to MFJ Enterprises in a couple of months (they are just up the road from me,so to speak) and buy one of their antennas.I think their products do look great though.

Degen is already talking about a high end receiver, much more high end than their usual $50 portables. It will probably be marketed to the West, since it will likely cost much more than anybody in Degen's traditional market (domestic China) will be able to pay. That indicates to me that Degen must have pretty strong sales of its portables like the 1102 and 1103 in the West.

You're going to love it once you get used to using it and it's features. I guarantee you'll haven't heard SSB and Hams this good till you've tried the R-75. And the ECSS is just superb. Hook a good antenna to it and you're going to be up late nights :)

Check out Phil's CookBook in the Yahoo newsgroup files section. Great place to start besides the manual.

Have fun
Lucky

sdanie...@nyc.rr.com:  I'm curious: How good the R-75's sync is after the Kiwa mod? Is it comparable to the sync on an R8B or one of the Lowe receivers?

mike0219116:  I used to have a Kiwa modded R75 and I currently have a
R8B.

The modded R75's synch cannot hold a candle to the R8B's synch.  It's
superb.

The 14 Characteristics of Fascism
by Lawrence Britt
Spring 2003
Free Inquiry magazine

Political scientist Dr. Lawrence Britt recently wrote an article about fascism ("Fascism Anyone?," Free Inquiry, Spring 2003, page 20). Studying the fascist regimes of Hitler (Germany), Mussolini (Italy), Franco (Spain), Suharto (Indonesia), and Pinochet (Chile), Dr. Britt found they all had 14 elements in common. He calls these the identifying characteristics of fascism. The excerpt is in accordance with the magazine's policy.

The 14 characteristics are:

Powerful and Continuing Nationalism
Fascist regimes tend to make constant use of patriotic mottoes, slogans, symbols, songs, and other paraphernalia. Flags are seen everywhere, as are flag symbols on clothing and in public displays.

Disdain for the Recognition of Human Rights
Because of fear of enemies and the need for security, the people in fascist regimes are persuaded that human rights can be ignored in certain cases because of "need." The people tend to look the other way or even approve of torture, summary executions, assassinations, long incarcerations of prisoners, etc.

Identification of Enemies/Scapegoats as a Unifying Cause
The people are rallied into a unifying patriotic frenzy over the need to eliminate a perceived common threat or foe: racial , ethnic or religious minorities; liberals; communists; socialists, terrorists, etc.

Supremacy of the Military
Even when there are widespread domestic problems, the military is given a disproportionate amount of government funding, and the domestic agenda is neglected. Soldiers and military service are glamorized.

Rampant Sexism
The governments of fascist nations tend to be almost exclusively male-dominated. Under fascist regimes, traditional gender roles are made more rigid. Opposition to abortion is high, as is homophobia and

anti-gay legislation and national policy.

### Controlled Mass Media

Sometimes to media is directly controlled by the government, but in other cases, the media is indirectly controlled by government regulation, or sympathetic media spokespeople and executives. Censorship, especially in war time, is very common.

### Obsession with National Security

Fear is used as a motivational tool by the government over the masses.

### Religion and Government are Intertwined

Governments in fascist nations tend to use the most common religion in the nation as a tool to manipulate public opinion. Religious rhetoric and terminology is common from government leaders, even when the major tenets of the religion are diametrically opposed to the government's policies or actions.

### Corporate Power is Protected

The industrial and business aristocracy of a fascist nation often are the ones who put the government leaders into power, creating a mutually beneficial business/government relationship and power elite.

### Labor Power is Suppressed

Because the organizing power of labor is the only real threat to a fascist government, labor unions are either eliminated entirely, or are severely suppressed .

### Disdain for Intellectuals and the Arts

Fascist nations tend to promote and tolerate open hostility to higher education, and academia. It is not uncommon for professors and other academics to be censored or even arrested. Free expression in the arts is openly attacked, and governments often refuse to fund the arts.

### Obsession with Crime and Punishment

Under fascist regimes, the police are given almost limitless power to enforce laws. The people are often willing to overlook police abuses and even forego civil liberties in the name of patriotism. There is often a national police force with virtually unlimited power in fascist nations.

### Rampant Cronyism and Corruption

Fascist regimes almost always are governed by groups of friends and associates who appoint each other to government positions and use governmental power and authority to protect their friends from accountability. It is not uncommon in fascist regimes for national resources and even treasures to be appropriated or even outright stolen by government leaders.

Fraudulent Elections

Sometimes elections in fascist nations are a complete sham. Other times elections are manipulated by smear campaigns against or even assassination of opposition candidates, use of legislation to control voting numbers or political district boundaries, and manipulation of the media. Fascist nations also typically use their judiciaries to manipulate or control elections.

I'm curious as to what users have found when they use the general coverage in their ham transciever for SWLing and VLF.  Has anyone made any AB comparisons to their SWL gen. cov. RX?  Which ones seem to be best?  I know Kenwood and Icom make SWL receivers that look much like a transciever and might even use the same circuitry, not sure about Yaesu though.  The Icom R-75 looks a lot like the Icom 718 but the Rx has the PS built in. I can't recall the Kewood models.  How about the Kenwood TS-2000 or Icom 756 Pro for gen cov?
tnx

Oh, I don't think you are being a jerk at all, and I don't take offense! This newsgroup is all about sharing, and I appreciate your contributions, along with everybody elses contributions. This is what it is all about!
Anyway, I didn't see that original spec that the person gave, but looking at the ad again, I do see what you mean. The whole point I was bringing up was the statement that the seller made about the RA17 being able to hear weak signals better than the 6790.............I believe that there was some sensationalism in that statement. What I was also saying was that if two receivers have a low enough noise floor such that antenna noise overrides the internal noise of the system, both of the receivers should be able to hear the same signal. One of the units may have better audio quality and be more pleasant to listen to, but I think that this is about as far as things go.
Now, it could really be that in Racal's specification that they are actually specifying a sensitivity of so many uV for an 18dB S+N/N ratio. I just don't know.
I do understand what you are saying about distortion analyzers..........I have an HP 339A of my own, but most of the time I use it for characterizing audio equipment or for aligning the detectors of FM systems using the SINAD method.
I remember the 334A also had an envelope detector so that you could measure the distortion of RF sources up to 50MHz. I also do realize that one of the best ways to check a radio is to measure the distortion of the RF, detector, and audio chain by injecting a modulated RF signal at the antenna input at around 1000uV and measuring the distortion at the audio output with a distortion analyzer. This is one of the tests I do with my own homebrew receivers...........I shoot for under 0.5% distortion; if this occurs, I am relatively happy.
On a final note..........................feel free to shout me down anytime, either in this NG or directly. I realize that I only know a small portion of what there is to know, but I try!
I wish you the best!

Pete

=E2=96=A0 PL350 has been the German fresh engineer summarizes the for many
years number =E8=B0=83=E6=9C=BA design experience, and listens to the domes=
tic and
foreign radios amateur's precious suggestion carefully designs becomes
=E2=96=A0 this machine outward appearance is exquisite, the function are
many, the operation is simple, the sensitivity is high, the selectivity
is good, the timbre is exquisite, may listen to the frequency
modulation stereo sound with the earphone
=E2=96=A0 is equipped with the high / center / low 3 grades of sensitivities
control, facilitates receives the good broadcasting station program
under the different environment
=E2=96=A0 the frequency modulation / short-wave band is equipped with the
best sensitivity =E8=B0=83=E8=8A=82=E6=97=8B=E9=92=AE
=E2=96=A0 center / the short-wave band used the 450/455kHz variable
intermediate frequency technology, greatly enhanced the anti- mirror
image frequency disturbance the ability
=E2=96=A0 may automatically search and the memory frequency modulation and
the medium wave broadcasting station program (the ATS function)
When =E2=96=A0 listens to the news / music different program, may use the
high / bass switch adjustment acoustic fidelity
=E2=96=A0 the medium wave / FM broadcast may establish the world various
countries local standard: The FM wave band may establish covers
87-108mHz (suits national FM service pattern and so on the China, North
America and Europe) or establishes 76-108mHz/ the Japanese FM service
pattern (may listen to our country partial campus broadcast /
=E7=94=B5=E8=A7=86=E4=BC=B4=E9=9F=B3); =E4=B8=AD=E6=B3=A2=E6=AE=B5 the freq=
uency step enters may establish 9kHz
or 10 kHz (North America medium wave service pattern)
=E2=96=A0 this machine harmonious precision high: The frequency modulation
reaches as high as 0.01mHz, center / the short wave is 1kHz
=E2=96=A0 has many kinds of harmonious elects the way: =E6=89=8B=E5=8A=A8=
=E6=90=9C=E7=B4=A2,
automatic search, direct input broadcasting station frequency or search
memory address
=E2=96=A0 this machine used the multi- functions numerical code type flying
shuttle knob, serviceable established the clock, the adjustment
frequency, the address and the page =E9=9D=A2=E6=95=B0, you also might at w=
ill open
/ close this knob the accent static chirp function.
=E2=96=A0 this machine may wilfully save reaches 550 broadcasting stations
frequencies, also for a long time does not electrify also does not lose
remembers its tendency minute page memory pattern is extremely flexible
practical: This machine fixes the P0 page for remembers 50 broadcasting
stations frequencies; You may act according to individual affection,
other 500 memories address, divides into 10 page of X50, 20 page of
X25, 25 page of X20 or 50 page of X10 memory contact surface,
facilitates you stores up the memory each kind of different
broadcasting station frequency according to the different page /

address pattern
=E2=96=A0 this machine may establish 12 or 24 hours clocks demonstration
service pattern, open machine after simultaneously demonstrates the
time sum frequency rate
=E2=96=A0 the creative intelligent sleep automatic pass machine function, y=
ou
may according to individual custom resetting automatic pass machine
time length
=E2=96=A0 may establish fixed time automatically open machine after listens
to you assigns the frequency the broadcasting station program
=E2=96=A0 the many kinds of at night illuminates the pattern, and is equipp=
ed
with the at night operates the automatic illumination function
=E2=96=A0 uses 3 R6 (5) the battery power supply
=E2=96=A0 inside set at the entire automatic pulse width =E6=81=92=E6=B5=81=
 =E5=85=85=E7=94=B5=E7=94=B5=E8=B7=AF,
might examine the charge battery capacity size which the battery peak
voltage, could act according to again uses, automatically established
=E5=85=85=E7=94=B5=E6=97=B6=E9=97=B4, filled =E8=87=AA=E5=81=9C, on the LCD=
 screen as necessary
demonstrated =E5=85=85=E7=94=B5=E6=97=B6=E9=97=B4 and the voltage height
=E2=96=A0 stochastically forwards as an enclosure the high quality stereo
sound earphone, 3 1100 milliampere / o'clock nickel hydrogens charge
battery, outside the DC-06 voltage-stabilized source, the short wave
meets the antenna and finely guarantees the protective covering.

For casual use my Kenwood TS-870S works fine for SW and BCB listening.

I think it is really more in the antenna than the receiver as far as "pulling em in". Most modern rigs have lots of gain and sensitivity. The noise floor is more importatnt in this regard. Dynamic range is an important consideration as well.

But purists would opt for the SWL receivers with synchronous detection and other features not found on Ham transceivers.

A Ham transceiver has the advantage of use when and if you have Ham license.

Also the TS-2000 (as an example) covers
    TX: 10-160 m + WARC / 6 m / 2 m / 70 cm
    RX: General coverage
    23 cm/10 W option
    Mode: AM/FM/SSB/CW

FO&A,
 .
It is my understanding that RL Drake makes more from the
Grundig Satellit 800-M "Licensing Agreement" with the
ETON Corporation then from the Sales of the Drake R8B.
 .
If this is true, then the Eton E1 AM/FM Shortwave Receiver
with XM Satellite Radio with the internal Circuit Design
work done by Drake may be a bigger profit center then for
the RL Drake Company then any new R8C or R9 Receivers
could be for keeping the company in business.
 .
the business of a business is to stay in business ~ RHF

In article <hvgZd.55219$xt.53572@fed1read07>, CL@incognito.com says...

> You obviously don't own a dawg or have any children.
>
>

It's kind of funny, I used to have a dog that was a chewing machine. I got him on April 15th of 1985, and that night, I insanely bought a new car! In the first week, he ate a hunk of carpet about 12"x18", and the sound deadener sheet under it(asphalt and recycled fibers), the door panel on the back rear door and he also chewed off the door handle too, along with the radio wiring when the original radio died and I was waiting for the replacement. He ate furniture, carpet, wall trim, a door edge in the house, and housebreaking took forever. Finally, after destroying a lot of stuff, he finally stopped, and housebreaking followed soon after. It took about a year to get him to always poop outside!

I guess most people would have gotten rid of him, but he turned out to be my favorite dog of all, and lived to 14.5 years. I got a break with the two I have now, they chewed about 3 days, and didn't have the jaw power the last one did. Housebreaking took a week..

But he never, ever touched one of my radios, or the half dozen coaxes that he could get to, or the power cords. My cat found out that biting a live power cord isn't fun. It knocked him across the room and he screamed louder than I thought he possibly could. Other than some minor burns on his mouth, he was fine, but he never bit a cord again! If you have ever had the "Pulp Tester" at the dentist, you can imagine what it must have felt like.

They didn't need to use a drill in the movie "Marathon Man", the pulp tester was worse, and left no marks! I have had it twice, and I came very close to kicking the Dentist's ass when he touched it to the tooth a second time. The pulp tester is used to see if a tooth is still alive, and if it is, it's unbelievable. I've had some 3rd degree burns on my right hand (making my own fireworks, DUMB!!), and it was a picnic compared to the pulp tester. Nothing I have ever felt has come close to the pulp tester for sheer pain. At least it only lasts a second or so..

A friend thought I was BSing about it until he fell and knocked three of his teeth loose. He didn't go to the Dentist until three days later, and he found out the meaning of pain! LOL, now he knows I wasn't exaggerating!

BDK

My suspicion is that it's the non-shortwave-related stuff they produce
that's keeping them in business...the digital TV and satellite TV
products. The 800, while profitable, is probably a tiny blip on their
radar screen.

Steve

She didn't like the fact that a couple of weeks after 9/11, I took
some photos well outside of the NYPD boundaries. Loafie called me a
scumbag and some other choice names, before expressing her desire to
murder me:

http://groups-beta.google.com/group/alt.showbiz.gossip/msg/feb9b82164db011a?
dmode=source

There's a reason she's so despised across Usenet, and it's because she
is such a foul and offensive piece of garbage.

Sad to see yet another maker of high end receivers pull out of the
market.  Especially one with so many historic ties to the SWL hobbyist.
 It is as the old Petula Clark song goes:  A Sign of the Times.

I've got this bad feeling that the prices on used R8/R8A/R8B
are about to go up a bit, for a while at least.

A very fine receiver indeed.
Drake going out of serious SW radio manufacture is very sad.
There is a long line of very fine Drake receivers going back decades.
The Drake R7A remains an awesome performer even to this day.

My review of the Drake R8A/B in Werner Funkenhausers WHAMLOG confirms they are venerable radio's.

I guess at this point you might wish to call AES and/or HRO to inquire if they
still have any in stock.

Cincinnati, OH, using a Grundig Satellit 800 and a 50'
long wire with a 9:1 transformer.  Still have my old
Realistic DX-440 for usage with the kids, and a
Hallicrafters S20R Sky Champion in, um, a need of
a bit of work.

All I can say is, I'm glad the R8B was still around last year, when I
gave myself permission to buy a nice tabletop set. It surpassed all my
expectations, and then some.

Steve

I think I'd rather not torture myself right now about it.  I can
scrounge up some dollars for the Hamvention, but it's far
short of the going rate for a new R8B.  The vast majority of
my spare buckage is heading toward replacing our garage
doors.  Kinda like that Harley commercial:

garage doors -- R8B
R8B -- garage doors

--Mike L.

I just called Milwaukee AES and they had one left. The fellow there did not know how many were left at the other AES stores, but he figured there were only a few.

HA HA HA

Such a great receiver that no one is buying them! I love it. Soon we won't hear dxace the "kids voice" hawk his old equipment anymore. This is too cool.
Happy day for me....

Mike save it. That guy is a pure moron and has the brains of a termite and
the personality of a pencil. He doesn't know what he's talking and never
will. Your totally wasting your time with him.

Lucky

But I'll still have my equipment, and still out DX you any day of the week.
After all, I already have.

LMAO

What an incredible disappointment...NOT with the radio's performance.
In some respects I believe it equals or may even surpass the Icom R75 I recently sold. What IS a disappointment is the condition of the radio...I am trying to communicate with the person from whom I won the auction on Ebay, no luck so far.

Anyway, I am trying to get this radio in as new condition as possible and I am looking for help with the following problems:

1- The frequency display does not seem to follow the tuning knob. Almost takes a second or two to catch up.

2- the selection buttons on the bottom have to be pressed NUMEROUS times before the radio responds. Takes 10-12 fast pushes to change mode, tuning steps, fast or slow tuning etc.

3- There is a scratch on the display crystal (not the LCD, but the clear plastic overlay)

4- The Volume control knob and shaft came out. I can no longer use it to turn the radio on or off and must do that by applying or diconnecting external power in the back !!!

There you have it. I checked the Lowe web site and they clearly indicate that they no longer ship/sell to the United States.

I know this sounds a bit silly, but shortwave radio is my primary hobby...I don't hang out in bars, play cards or anything else like that...after a crappy day at work the radio is kinda' my escape...and my crappy days at work are usually quite bad. I have one daughter in college and another getting narried in two months, so, as you can imagine, I'm broke.

I was wondering if anyone had any advice.

Thank you so much for your time.

John, KB2COP

I don't think Drake pulling out of the SW receiver market has anything to do with the quality of the product.  Every review I've read gives their products high marks.  They are pulling out for the same reason so many other companies have stopped making SW receivers - declining demand.  Both hobbies, SWLing and Ham radio are gradually losing out to competition from the internet and other ways of communicating and getting information.  Consequently there is less demand for the asssociated hardware.

Look around at the number of SWL and amateur radio retailers that have closed in the past decade.  The latest Passport to World Band Radio has advertisements for one principal radio manufacturer when is past years they had many.  Signs of change are unfortunately everywhere.

Strategies vary, but if I didn't have one, I'm of the school that it's better to get a receiver that's actually made currently than be stuck with a broken one when it breaks.

The R8B is very nice but it's also a lot of money.  My chief unmet need is a better selectivity against really huge signals on the adjacent channel, so as to copy 910 kHz LSB when there's a local on 920.

Unfortunately I can't null the 920 because I'm already nulling another station on 910.

The R8B does pretty well but I need more dB here.

Service will be available for years, either at Drake or through another tech.

My R7 (still one of the best dx machines ever built) is still readily serviced by numerous technicians throughout the USA.

I am sorry to see that Drake is discontinuing those Great Radios.I wish I had the money to buy one.I can wish,can't I? Maybe someday a Drake radio will turn up in the Goodwill thrift store I check out two or three times every week.Even if it needs repair,I would send it somewhere for repair.

I find the Drake R8 series, while a decent enough receiver, really
annoying to use, and I don't like the looks of it at all. While the R75
isn't something I would buy at this point, it's not a bad radio for the
price, and the annoyance factor is about one third as much as the Drake.

I can't see how a R75 would have anything to do with people leaving the
hobby.

Thoughts on the demise of the former BBC/DW Caribbean Relay Station...

Websites with details of relay station:
http://www.tdp.info/atg.html
http://www.transmitter.be/mar-b6122.html

-=-=-=-=-=-=-=-=-=-=-=-=
Possible reasons for shutdown
-=-=-=-=-=-=-=-=-=-=-=-=

1. Marconi is totally out of the SW transmitter business, so transmitter repair over the long run is a gamble.

2. The B6122 transmitters were not very efficient, electrically -- 65% vs 85% with most modern transmitters.

3. Two modern ALLISS modules could replace the existing Caribbean Relay station.
(ALLISS module info :
http://www-db.thomcastcom.ext.coltfrance.com/db/thomcast/webdriver?MIval=V_Prod_Detail_b.html&F_ID=5&D_ID=1&P_ID=9)

4. There is extra capacity for SW transmission on the South American continent, where hydropower is used vs more costly diesel. HCJB could, along with TDF cover the Americas with their existing and spare SW transmission capacity.

5. Because the US / Canada and Western Caribbean are not BBC/DW target areas anymore, it becomes logical to sell the facility off so that it can be turned into an upmarket resort -- thus putting some Euros into cash strapped BBC/DW/VT-Merlin.

Note that the advert said "Signal / noise 18 db. "  Now of course the seller doesn't know where you live, so the argument about excess noise, though interesting, doesn't seem relevant to the ad. I'm not trying to be a jerk, so please don't take any offense.

Most distortion analysers measure signal to noise and distortion. I beleive the AOR 7030 has a similar spec, which would make sense given the Lowe and AORUK history.

Funny thing about the 7030 is the audio path is stereo except for the speaker output. You do hae stero to the headphones. This relates to the FM stereo option that never got released. It would have been nice to see the FM stereo come out as a new radio from AORUK since I assume much of the engineering had been done already. I'm sure it would have been a good one.

I've been a lurker here for a while and though I've been a ham for
over 30 years I don't know squat about SW stations ( times and
frequencies etc ) Anyway I've seen some posts that mentioned that the
BBC doesn't broadcast into the US anymore and I've seen other posts
that indicate that you can still receive them ? I'm in SE lower
Michigan and would appreciate any advice on times and frequencies if
they indeed still are broadcasting into the US.

Thanks in advance

Gary K8IQ

MW,

A while back, I bought a Sharp "Radio Controlled" Travel {Atomic}
Clock at a DD's Discount store for $4.99 they use a single "AAA"
(1.5 VDC) Battery; and is Made-in-China.
 .
Last weekend, I was in WalMart looking foe a new Senior Citizen

'type' Wrist Watch to replace my Timex "IronMan".
 .
While I was there I noticed a "Radio Controlled" {Atomic Clock}
Wrist Watch that had an regular price under $15.
 .
FWIW - Looked around and final settle on a Digital Wrist Watch
with Four Large 1/2" HH:MM Numbers.  Big enough so I could read
the Numbers without my Glasses.  The Wrist Watch is labeled as
an 'Alarm Chrono' and the Brand Name was "Athletic Works"
by MZ Berger = Made-in-China.
 .
OBTW - One thing I notice was that WalMart is now selling AAAA
[Yes that is Four "A"s] Rated at 1.5 VDC Batteries.
? Anyone know of an application for these extra small type "A"
Batteries ?

jm2cw ~ RHF
 .
 .

You can hear them.
6195 and 15190 kHz mornings
12095 afternoons, 5975 evenings
for more specifics check
http://www.primetimeshortwave.com (English language schedules on the left)
and http://www.eibi.de.vu (bc-b04.txt)
be aware that broadcast times and frequencies for lots of stuff will change
with "Summer time", which starts about a week before our U.S. daylight savings
time
BBC is reliable on the above frequencies

Just curious - I notice that some of the radios on eBay are described as
missing the battery cover.  I'm just curious; where do they go?  I can
understand missing manuals, broken antennas, etc.  But how do you lose a
battery cover?  Would anyone ever take one off and then set it aside,
instead of putting it back on the radio?  Anyone here ever "misplaced" one?

On a couple of my old handhelds, you drop it, even in the case, and the battery door was gone.. My Regency Hx1000 was the first one I had duct taped up..

I had the one on my Pro-43 just wear out, it wouldn't stay closed after a certain time, and the door would fall off. Someone screwed up the mod on one, and mine got a new back and battery door from the corpse...

Caps=capacitors.
Used to smooth the pulsating DC to smooth, no hum, DC.
And used to couple RF and AF from one statge to another.

Recap+replacing the capacitors

Capacitors don't age well.

They tend to dry out and open up, a marked decrease in vaule. Or go "leaky". That is to allow DC to go through, like you add a resistor in parallel. All caps leak a little, most of the time it is so low you can ignore it. Older caps, say from the 30s~early 60's tended to be wax paper and aluminum foil. The paper absorbed water over the decades and started leaking. Larger electrolytics, as used in power supplies, can have the liquid leak out. This can be a lot like a battery leaking as the juice was corrosive.

New caps, especially bypass and coupling tend to be mde with plastics, and are sealed much better. I think the Sprague "Orange drops", so called because of their odd orange color, have much better seals and are made of plastic and aluminium.

You might want to see if a local library has an oder, before 1980, edition of the ARRL hand book. It will have a lot of usefull data.

Terry

I wonder if there isn't more to the story. The manufacture of high-end tabletop sets long ago ceased to be a gravy train, even before the R8 line itself appeared. Someone at Drake, it seems to me, was committed to continuing the shortwave business *anyway*, and I wonder if that person (or persons) is either gone now or on the way out. We may never know.

I keep wondering if there's any way I can afford to buy a second R8B before they're no longer available new. Unfortunately, the answer is 'no'!

Good luck with them. I received a QSL letter back in 1985. I'd recommend a report in French.

I was fortunate to be able to visit Tunisia twice back in the 70's.

I'm curious: How good the R-75's sync is after the Kiwa mod? Is it
comparable to the sync on an R8B or one of the Lowe receivers?

Guess what folks, I think I've finally found the cause for the FM
bleedthrough on the ICF-7601 - plain ol' 1st LO crystal harmonics. The

4th harmonic (!) of the 20.4 MHz crystal used for 31m together with a local on 92.6 MHz will result in an 11.0 MHz signal which promptly appears near the bottom end of the 31m band (spectrum on 1st IF level is flipped). The old ICF-7600A had a somewhat differently constructed 1st LO circuit which looks to me like it should be less prone to this happening (LO signal tapped after buffer - with some lowpass filtering through a coil - instead of at the crystal). I guess my theory about the '7601 having been developed from the '4900 wasn't that wrong...

I'd asked about the future of the Drake series to the
service manager at R.L. Drake when I sent my Sat 800
in for a tune-up.  His response was that the R8B was
it, there would be no R9.

I'm afraid I can confirm this. I got an email message from Bill Frost
this morning. He said the R8B is the end of the line. There will be no
R8C, R9 or anything else. It's the end of Drake receivers. Very
unfortunate.

Steve

Did he say that the R8B was being 'discontinued', or just that the R8B was the end of the line?

I got the same response from him last year.

   I'm in Hartford, MI, in the SW corner of the Lower Peninsula.  Very
near Lake Michigan, very near the Indiana state line.

I think that's it, too.  Battery door covers on most things break like potato chips.  And most people, once it's broken, toss it.

Tony

I suggest you study-up on your American history before making these
absurd pronouncements about my Patriotism.  Blindly following despots
in not in the spirit of the Founding Fathers.

Protest is the highest form of patriotism.  Reagan reduced Freedom of
Speech when he allowed broadcasters to censor opinion.  Not in the
great tradition of open thought that our country is founded upon.
```

There are "cover gremlins," just as there are sock gremlins and screw gremlins.  You can disassemble a radio, put it back together and you usually will either have screws that mysteriously go missing, or extra screws that don't seem to go anywhere.  The Screw Gremlins, which live on the inside of the power sockets nearest your bench, either take screws from you or leave ones with which they have become bored.
They consider this a "fair exchange" over time.
Same with Sock Gremlins: put three matched pairs of socks in the dryer and out will come either two pairs and one odd sock, one pair and four unmatched socks, seven odd socks or any other combination.  Cover Gremlins are, however, much more greedy; they almost never return your covers and, if they do, they break them first.
There is no cure for them; they are just a fact of the radio life.
The Duct Tape Gremlins do help somewhat with this problem; they are responsible

for the five or six loose, partial rolls of duct tape
you can always find if you move stuff around enough.
Sympathies,
David S.

>>> Anyone here ever "misplaced" one?<<<

No but I picked up a mint DX380 (Sangean 505) at an estate sale for $5
because it didn't have the covers. Luckily the shack still had the covers
and the pouch/cover for it. Just last week I saw a real clean Lafayette (a
blast from the past) portable at an estate sale minus it's covers, didn't
feel like I would be lucky enough to come up with covers so left it
sit and walked out the door with a real clean Versa tuner 2 for $5. RM~

While there may have been a Maryanne Kehoe who has passed away, it is not the Maryanne of our hobby.  Deliberate confusion is practiced on the internet by nasty individuals who use aliases, (hey wait, I'm using an alias too).

Maryanne is an avid SWL from Atlanta who contributes regularly to various online and print publications centered around Shortwave.  Most notably she forwards press releases and the schedule of Voice Of Russia on a regular basis to the groups and clubs she participates in.  You can find reports from her in Monitoring Times.

The immature males who can't accept a woman as a DX'er in their hobby ridicule and put her down because she can be quite obnoxious at times, is tall for a woman, horrendously top-heavy and preferred to wear crew cuts. Under that exterior, which has shed a large quantity of poundage, and added an inch or two of head hair in the last year, she has a heart of gold.

I used to rag on her until one night when a bunch of us got into a chat room and started discussing the bad things we said about her. After a few minutes of laughing it hit us that we were all being jerks and none of us have said anything derogatory about her since.  Gee, I think I've done penance.

>DRM =3DQRM
>

Right, future of sofwave radio is Digital Radio Mondiale (DRM)! There are also first receivers availabe and acording to DRM Consortium (http://www.drm.org/) most major broadcasters are already or will be soon testing DRM broadcasts.

DRM is the world's only non-proprietary, universally standardized on-air system for short-wave, medium-wave/AM and long-wave.

Benefits of Digital AM for Listeners:
- FM-like sound quality with the AM reach ;=20
- Improved reception quality;
- Flexible use of radio, whenever and wherever you want it;=20
- No change to existing listening habits:
- same frequencies,=20
- same listening conditions (fixed, portable and mobile radio),
- same listening environment (indoors, in cities, in dense forests..);=20
- Low cost receiver, low energy consumption;=20
- Easy tuning: with selection by frequency, station name or programme type;=20
- More diverse programme content, using the full capabilities of new digital features;=20
- Wide receiver range with more and better features;
- Radios that will give you programmes with associated text information, station name, record title, singer=92s name...

Some receivers available:

Mayah Communications The DRM Receiver 2010:
http://www.mayah.com/index.php?id=3D8

Coding Techonlogies USB receiver for DRM:
http://www.codingtechnologies.com/products/digtrav.htm

It took so many years to get to where they are. In another 15 years, they would be passing through parts of the solar system fringes we will probably never have access to for decades, if ever. Would be a pity to simply cut them off and loose our link so far out into space... perhaps they can consider an automated system to receive and log the data , and to only trigger human intervention if a pre-determined change in data stream is detected...

I think former presidents are now referred to simply as "President."
The honourific is for life, now.  I recall some discussion around this
when the protocol was changed.

True, but I was referring to the lower frequencies (e.g., the 7390 kHz
that is the subject of the OP) which typically suffer during daytime
hours.  Generally, I'm finding even lower, directed at West Africa
transmissions are coming in quite strongly for me in Eastern North America.

When  first got my radio I just got noise around 30M during the day, or
maybe just local Hams on SSB.

I have been experimenting with different antennas, so maybe it's been
this way all winter, and one of my experiments is working better for me.

That's weird. I wonder why they didn't just come out and tell me it was discontinued? Anyway, this is very sad.

All I can say is: SNAP 'EM UP!! You won't be able to purchase them new much longer!

Steve

Why don't you sell it then? Why leave it in a closet. The spectrum
display looked interesting to me. Did that display turn out not to be
useful?

Except for Saskatchewan, Indiana, Hawaii and Arizona (some of these are parts of versus all I think), and maybe a few others, who stay on the same clock year round.

My grandfather repaired radios and TVs at about the same time, and even though he was poor he always had a TV set at a time when TVs were only for the rich. His TVs were customer rejects-if a TV needed more repair than it was worth the customer would say "keep it" and he'd bring it home and fix it for his own personal use. Capacitors or "caps" are a major part of any electronics design. Back in the tube days most caps were made of paper and wax and tended to go bad easily. If you find an old tube radio/TV that hasn't been used in 40 years, all the paper caps will long since have rotted away inside and will need to be replaced in order for the set to work. A classic indicator of just one bad cap in a tube radio is hearing a loud hum in place of a signal.

something.

Moot point; my receivers were paid for years ago,
and if I buy one, I can receive more than the BBC.
I also don't have to buy another license and equipment
if more than one person in the house wants to listen
at the same time.

The library, an mp3 player, a cd player, live365.com
and regular radio are enough for most musical tastes,
and I'm not a big fan of regular talk radio.

The BBC wants to tell me their viewpoint on the
world, just like anyone else does.  I've learned after
many years to filter the news, because otherwise
I just raise by blood pressure.  Is that a great tragedy?
No; there's too much that you hear that you can't do
anything about to make yourself worry about it.

Diesel engines use the heat of compression instead of high voltage operating spark plugs. The engine might have a DC generator instead of an alternator. The generator has brushes that spark so that could be doing it or he was operating some appliance such as a TV that was the problem. Maybe he had an inverter operating. If he comes back get the cops after him.

I believe that advocating violent revolt against the US government is
illegal. Maybe we should bring David's posts to the attention of the
FBI. Of course, *I* would never do that, just to get David off the
newsgroup permanently, but I can't speak for anybody else.

It might not be finished, but as with most funded projects,
there becomes a point of diminishing returns.  If this project
were thrown in with all the other DoD and DoE funding
requests, I'd doubt it would have gotten a grant.  The
response would have been something like:  "Didn't you
finish this already??  We have other projects to fund."

Yeah it is pretty useful.  The RX-350 is a very good high end receiver and might still become an excellent one.  It is 100% DSP and has a built-n noise reduction and auto-notch, three sync modes, and scans very fast.  Ten-Tec is finally working toward a firmware upgrade.

Heh, I wonder the same thing, since I've been scouring the
local classifieds for estate sales and whatnot, and that
can quickly turn into a full time job.

I wonder if he's going to bring some of his stuff up to the Hamvention in May.

I looked around on the Ten-Tec site and did not see this mentioned.
Where did you read about it?

No argument here.  Only discussions.   I'm still trying to figure out why an R-75 would make some one quit swl.  It isn't a hard receiver to use.  I use one and I am by no means a broadcast engineer.  Do you envision people who haven't had their first table top receiver as idiots and illiterates ???  If you can use a volume knob and an on/off switch you can use an R-75.  In short, if you've used any portable out there, you can use an R-75.   Perhaps I'm missing something.  Can you give reasons for your statement regarding the R-75 being a reason to quit swl ???

Michael

I'd asked about the future of the Drake series to the
service manager at R.L. Drake when I sent my Sat 800
in for a tune-up.  His response was that the R8B was
it, there would be no R9.  Sounds like their satellite
business is doing well; they had landed a deal with
SBC recently, he told me.

Really, it simply sounds like the future of shortwave
radios from Drake is to do the designs and let someone
else build it.  The service manager had told me that
after they'd signed the deal for the Sat 800, they'd
wanted to do one more run of the SW8, but they
couldn't.

Telamon:  I looked around on the Ten-Tec site and did not see this mentioned.
Where did you read about it?

mike0219116:  I know that PWBR mentioned that there was a new firmware under development.  In fact, they had been suppled with a beta version of the new firmware.  However, because of other committments, Ten-Tec has been unable to get a final version completed.

Talked to Gary Barbour at Ten-Tec.  He is really trying to get an update in.
He asked if I would do some testing.

That's just not true.  The R8 series has been a favorite of DXers' for
years.  There's a reason for that.

Well that's good news. If I had a RX350 I would jump on the offer to
beta test.

I can listen to BBC on my shortwave radios for FREE and I can listen AND
watch BBC America programs on my DirecTV too.Their next tv newscast is
at 5:00,6:00 and 7:00 AM in the morning (Central Standard Time zone
here) and again at later times in the day.

Actually the 7030+ speaker isn't so great either. I got a gander of it
when I installed that Kenwood CW filter. BTW, the filter works,but when
measured in the system it comes out a bit wide.
http://www.lazygranch.com/images/radio/cwfilter.gif
The -6db BW was about 300Hz. Measurements were done by turning off the
AGC and stepping a strong carrier. A distortion analyser was used to
measure the signal level (i.e. just the sine wave) until it fell into
the noise. I used the headphone output on the 7030 because I didn't
have a mono mini plug handy and for some reason the 7030 speaker out
didn't like the stereo plug. I had the radio in CW. I don't have the
low frequency plug in for my RF generator, so I can't sweep the fitler
itself.

Getting back to the second radio, I suppose I could get a used R8B, but
given the nuts on ebay, I'd probably end up buying one new for less.
That was why I was hoping the tentec 350 would be a good kilobuck
radio, much like the 7030 was when I got it.

As soon the Drake leaves the business, expect to see ads readling
L@@K, rare vintage R8B collectors item WOW!

Yes, it is true.  Indeed the R8 is a great receiver and very popular.
Regardless, the R-75 is a more capable receiver for DX'ing and utility.  The
primary reasons for that:  The R-75 uses two filters in series and the R-75
has twin PBT.  I have used both receivers. The R-75 is a better DX'ing rig.
I have no stock in ICOM or need to prove it is a better receiver.  I'm just
stating facts.  Using ECSS in ssb, the R-75 is a prime DX'ing rig. Nothing
against the R8.

Michael

A top firing driver sitting in a metal radio enclosure is just not going
to sound as good as a front firing 2 driver in a more solid enclosure
designed just for that purpose. All three table top radios I own sound
better on bookshelf speakers or headphones.

Well, any spam I get I either delete it, since I don't know who it is,
or I forward it all to spamcop.net and uce@ftc.gov.

No, my tinnitus is due to a hearing loss in my left ear and not long
listening to SW.

Yes, Maggie Valley and Jonathon Creek  do help relieve it and so does
Trans-Derm Scop patches.

The world wide beacons are low power and SW BC stations use much higher
power.  I probably won't hear the beacons when I probably can hear the
SW BC stations so that's why I asked about posters' locations.

It's amazing how R-75 owners seem to think that only their receiver does
ECSS.  It's as though ECSS was a feature of the R-75.  Every modern tabletop
receiver I have ever owned does ECSS very well.  So what?

Two filters in series is good why?  Twin PBT doesn't seem much better to me
that 5 well chosen IF filters and a good IF passband offset control.  All
that is stock with the R8, R8A, R8B receivers.

Those on the 350 Yahoo group know that TenTec improperly date stamped the
update in a website revision. The available firmware is indeed over 18
months old.

```

For MW DX, the display is not particularly helpful, given the very low signal strengths, huge local to DX signal ratios, and directionality of antennas we use today. The other features are cumbersome to use, and the firmware to address many issues is apparently not being developed per the Yahoo 350 group.

The receiver has no real aftermarket, unlike the R8B or the R75 or other
well known receivers. I'd rather risk the chance of getting new and workable
firmware than the hassle of selling , packing and such.

> Why leave it in a closet. The spectrum
> display looked interesting to me. Did that display turn out not to be
> useful?

Not very. Great idea, but on MW not useful due to the huge local to DX
ratios of strength.

```

That is encouraging if it were not for the nearly two years since they last updated despite well published problems in the last versions. I have found the company to be less than responsive (which is why I did not buy a 340). I needed a new manual, and they don't have a downloadable PDF such as I am accustomed to with most computer and communications (commercial broadcast gear) I use; I overpaid for a manual to a piece of equipment the company had not updated for some time yet continues to sell.

I found one source where dealers are catered to because of the bucks they
are willing to pay(more than the regular customer) and that is Value
Village.  I'm sure he has a few "ins" with other used retailers as well.
I've missed so many bargains myself, being outdone by a dealer.  I've seen
them carrying lots of some really great electronics from the store.  Then
too, some of the employees husbands or friends in the trade will ask them to
watch for good used  items.  They beat you to the punch before you know it's
being served!

Somewhat noisy conditions this time, so this will be a
short list:

12-Mar-2005       2054 UTC       6954.9 KHz
Radio Free Euphoria
United States
English
Man yelling "Marijuana, Marijuana". Poor signal. ID promos
from other pirate stations and phone-ins @ 2102.

12-Mar-2005       2045 UTC       6944.7 KHz
Unid. (Pirate)
United States
English
Rock mx, address @ 2050 but no ID hrd. Poss mention of
Huntsville, Alabama mail drop. Off at 2051*. Poor signal.

12-Mar-2005       2018 UTC       6070 KHz       1 KW
CFRX
Toronto, ON, Canada
English
Commercials, "CFRB 1010" ID, into "Car Talk" program. Good
strong. signal.

12-Mar-2005       1909 UTC       9965 KHz       500 KW
Public Radio of Armenia  (tnx DXAce)
Gavar, Armenia
German/English
YL reading nx, mentions of Armenia. English 1925-1945. Full
ID and address at 1944* sign-off.

12-Mar-2005       0020 UTC       6955.3 KHz
WMPR (Pirate)
United States
English
Rock mx, songs "Why Can't I Be You", "Reach Out and Touch
Me". ID @ 0028 by man "WMPR" then woman "6955". Into 80's
rock "I Will Always Love You". Strong.

I have tried many variations of common mode chokes and compound filters
on the power cable but to no avail.  This was the only thing that
worked.

>

I wrote to him too. I said sometimes if Ebay thinks a scam is happening,
they call the police who watch the people that pick up the money and see if
they send the item out. If not, they bust them :)

But, this is how I *knew it was a scam. I read his return policy. I'm
originally from New York, so as soon as I read that your "shipping charges
are refundable", I knew this was a dummy trying to pull  a fast one. See:

Return Policy
"Most of the problems can be solved via email. You will have to contact us
and we will troubleshoot your problem. If we can not help, you will simply
send it back for a full refund. When you contact us you need to be very
descriptive and send us your question, full name, item number and ebay
username. Allow 1 to 2 weeks to process refunds. Shipping costs are also
refundable".

That gave him away immediately from jump street. I didn't have to know
anything else.

Lucky

If the vertical scale is linear then they could make it logarithmic.
That might be a help.

Did Mrs. Oblinger's husband perhaps get deported?  IIRC she wrote on alt.visa.us.marriage-based a whiles back that his "refugee" status had been rejected, therefore making him "ineligible for employment"...

I find this quite strange don't you? What is it that could cause a
differential filter to work better than a common mode one in this
situation where a 100MHz transmitter at significant distance from your
dwelling would be able to cause coupling to the house wiring
differential mode, which has to be happening for a differential mode
filter to "work better" than a common mode filter.

Sure makes me wonder what the AC waveform coming into house look like.
Well, what else then? Grounds can be a problem. In house wiring that is
the third prong. I don't know how your radio might be using it. Some
wall wart supplies don't use it. If your wall wart does use it maybe
there is a problem with the house ground wire connection at the breaker
box end, which would allow the ground wire to act as a good antenna for
the FM band. In that case the ground could inject the RF into the power
supply differentially depending on how the decoupling was arranged.
This is a real reach but my best shot not being there.

You've got that right..................Neil Kazaros came up with a pretty good phasing scheme for this type of problem. I met him at the Madison, Wisconsin Dxers gathering about 5 years ago. One of his specialties is antennas.

Pete

I am not sure what he was talking about.........................he mentioned that the RA17 was able to hear signals better than the 6790 could. Didn't make much sense to me, unless he was talking about audio characteristics. My "side issues" were potential mechanisms that could cause that type of problem. This wasn't aimed at you.............this was mentioned for the benefit of some of the new folks on this NG (there are thousands of folks in this audience). I never heard of an 18dB SNR; typical signal plus noise to noise ratio is generally specified at either 6dB ( older Collins equipment) or 10dB. Exceptions were some of the Hallicrafters equipment that was specified at 20dB signal plus noise to noise ratio.

When I am talking about noise figure, I am talking about input signal to
noise vs. output signal to noise. This is a measure of how much noise the
receiving system is adding to the original signal.
What I was talking about was excess noise from the environment. This term of
excess noise is used in the industry; at least it was a familiar term to the
folks at Rockwell-Collins.

> issues. So are you saying by 18db SNR, he meant a noise figure of 18db?

I didn't say 18dB SNR...........I said 15db excess noise from the
environment. Quite a different thing.
>

You are talking about NAD................noise and distortion?

The only time a distortion analyzer is used is when making the SINAD type of
measurement, and that is generally when characterizing an FM system.  This
type of measurement is not generally used with AM systems, either envelope
detection or SSB detection. The only exception I ever saw was in the Lowe
HF-150 service manual.

Back in the late 1940's,my brother (he was eight years older than I) came home with a shortwave radio.I remember him putting the antenna on the roof of our house.He tuned in and folks around the World were talking about the aftermath of World War Two.By the way,he was a Helicopter Mechanic at Vung Tau,Vietnam in 1964,the same year I was at Shannon Wright Compound www.114thaviationcompany.com in 1964.I was at Shannon Wright Compound for about three months and then I got transfered to Tan Son Nhut (same Company,114th Aviation Company) for the remainder of my Tour Of Duty in Vietnam. www.tsna.org It was his second Tour Of Duty in Vietnam following a year in Germany.Before all of that,he was a U.S.Army MP.

A week or two ago I read on the internet somewhere (if it's on the internet,it's got to be the truth,eh?) that some U.S.companies are interested in setting up shop in some East European countries.There are already some U.S.companies doing business in some East European companies and have been doing so for many years,but perhaps more U.S.companies might start doing business/manufacturing over there.Perhaps some "Drake" radios might start being built over there?

Us webbys can click on Clean up in our webtv email in boxes and the spams including emails that are not spams will appear with little empty boxs to the left side of the emails and we can click on Check all and then the same page will appear with all of the empty boxes with check marks in the boxes and then we can click on Discard and delete all of the emails.Or we can put the check marks in whichever emails we want to discard and then click on Discard and do it that way.We can do that with our wireless keyboards or with our hand held remote controls.I never click on any spams,I always delete them.I never use my computer for emailing and I never will.I can very easily live without emailing.In fact,I wish my computer had NO emailng capability whatsoever.If anybody can design/invent a computer that can do everything computers can do but impossible to use for emailing,emailing in or out,that person or persons will be the richest person or people in the World,Guaranteed!

y'all want a chance to win a sooper dooper computer valued at $7,800
built by some folks at Popular Mechanics magazine? Look in Popular
Mechanics magazine for April 2005.I have my snail mail issue right
here,it showed up here yesterday.Here is the website,
www.popularmechanics.com/monsterpc
Wish me Luck on winning that computer.I am not greedy,I spread the News.

In U.S.A.Anyone can Legally Own a Transceiver or many Transceivers.However,if one is not licensed and does use that Transceiver or other Transceivers,Hams will track that person or persons down.I do not own a Transceiver and I am not licensed to use a Transceiver or Transceiver and I would never use a Transceiver unless I aquire the proper license or licenses first.I do own some CB radios and some old Motorola ex police/ex Sheriffs vehicle two way radios which are

Legal for me to use since they do not require and licenses.

For whatever reason I skipped out on the R8A as well. The only one of the other above receivers I never owned was the R-4C which I don't think was noted as being a good SWL receiver.

I also have had a few SW-4A's.

On this day we lost both the R8B and the R75.  I'm really gonna miss
all of those R8B vs. R75 threads!  :)

I guess the JRC NRD-545 will be the next to go.

Stay tuned...

"If you were willing to pay an employee at such stores a % for leads, you could probably make a buiness out of it". Exactly what takes place! Keep your eyes and ears open when you spot them. You'll soon catch them working their underhanded skills. They're usually tight lipped about their transactions but once in a while you'll hear a newby to the trade bragging about deals they get and how much profit they made on this or that item. These ones usually disappear quite quickly... why and where to, I don't know. I've seen this happen many times at a few Good Will(Thrift) stores. 'Very protective of one of their major sources of profit.
You've probably noticed some of the new "antique hunters" with the Indian Jones hats and spawned by the show of the same name, scouring the thrift stores. The days of finding something of value for next to nothing in these places are limited. But then you can always still buy the item at usually grossly inflated prices at the flea markets etc. ..... if you choose to do so.

My Guess is that,

 until the last R75 production run has finished

Icom won't announce a new SW  receiver . . .

Well, if it's discontinued, don't you think that the last production run is already finished?

The government has created a situation much more insidious than
martial law already.  They have brainwashed the people and have
passively sedated them.  The people have been subjugated and don't

even know it.

No need to censor anything;  just create an alternate reality in the
mainstream media.  Kind of like that ERD that obliterates people but
leaves the buildings intact.

Vigilance!

It ain't like it was 20 years ago, either.  I've been listening since
about '62 and I think we peaked ca. Desert Storm (i.e. 1991).

I thought you were referring to daytime propagation in general, which is better on the higher frequencies during the winter in the northern hemisphere.

>Hi Lucky,
The niMH are fine- I've had a set in my latest 150 for 2 years now-
continuously trickle charging.
As before, the problem is when users place alkalines in the battery box and
then use the AC adapter. It would have been nice if Lowe had included a
charge/no charge switch on the rear apron.

Yeah, if there was going to be another production run, then Universal
wouldn't have felt the need to stockpile them now. I'm afraid the R75
is history.

```

I asked my longtime friend and SWL mentor, A.E. Neuman what he thought and as always he said; What, me worry???

I'm not worried that it's all going away tomorrow, because things won't change all that fast.  There will be plenty of stations to hear for quite a while.  But it is impossible to ignore how the shortwave broadcast industry is changing and how those changes impact the swl hobby.  The number of countries switching to more efficient ways of getting their message out to the world is steadily increasing.  We continue to read about satellite rebroadcasts and the internet replacing expensive broadcast facilities.  The number of stations listed in the frequency section of periodicals like MT is visibly smaller than it once was.  The number of companies producing and retailers selling short wave receivers is way below what it was 15 years ago.

Listening to noisy, crackly shortwave broadcasts subject to the whims of propogation is fun for hobbyists, but it isn't a particularly attractive alternative to CNN, webcasting, satellite radio, cable tv, email and the internet for lots of people.  By any measure the number of alternatives to hf broadcasts continues to increase.

Me, I'm going to continue to listen to the shortwave bands as I've always done.  Because I have enough portable and tabletop receivers I doubt that I will be in the market for a new unit for several years. An even when the time comes, I suspect that I will look for a good used high-end receiver since there are so many for sale. Decisions like mine combined with smaller numbers of new swl's entering the hobby means lower demand for new hardware and more companies like Drake dropping out of the market.

Big sellers usually have several sources out looking for them.  Those
sources are scouring the same ebay auctions, estate sales and in-person

auctions you and I go to, so if you see something you want jump on it before someone else does.

Ebay is the ultimate marketplace and is pretty effective at matching buyer and seller.  Consequently it is getting harder to find "steals" online - there is too much competition.  Absent finding a bargain you and I will just have to be willing to pay the going price or pass.

Jim:  Don't forget that BBC Webcasts for free also.   Go to
http://www.bbc.co.uk/radio/

No static, no fading, no bullshit.  Just crystal clear audio.   You
can listen to Radio 1,2,3,4,5,6,7 as well as World Service.

And people wonder why shortwave is dying!

Jim

mike0219116:  Good luck listening to the BBC over the internet during
the next terrorist attack, or other similar crisis.  The internet was
overwhelmed on 9/11.  I got most of my news that day from the radio in
my office becuase the internet was useless.

Passport says that Yaesu makes a "VR-5000" tabletop, which the review indicates is far below the classic Frogs.

Icom currently seems to have the most tabletops on the market, if Passport is any indication.

I believe that in the US only licensed hams can own transceivers. The ham community is pretty tight fisted with their existing rigs, many making you show them your license before they let you buy their rig. This is apparently done to combat pirates, which the hams view as threatening their spectrum (although since hobby broadcasting is illegal, it's hard to see how).

It also follows that those people can't afford a $1500 radio, but CAN
afford a $50 Degen or Tecsun. Gee, I wonder why tabletops are being
pulled from the market while cheap China made portables are showing
strong sales? I DO wonder what the most common SW radio is in the third
world. I've seen footage of Iraqis listening to old European tube SW
radios. The movie The Killing Fields showed the camp escapees listening
to such a radio. I would figure that probably old Grundigs, Telefunkens
and Phillips's are the most common SW radios, except in the old Soviet
Bloc where the state made radios would be the most common.

YOU try explaining this to our resident XM Satellite Radio owning
"leftist". I've tried, but I'd rather beat my head against a brick wall.
He doesn't seem to get that if the BBC pissed off George W. Bush that it
would disappear from satellite radio.
>

And then the government will force through BPL not to give people better
internet connectivity (it doesn't) but to use as a blanket shortwave

jammer. And also to force the public to buy expen$ive digital TVs and
expen$ive satellite TV subscriptions to go with them. Of course, the
government will get its kickbacks from all this forced purchasing of
$3000 TVs and $600/yr satellite subscriptions. I don't think it's an
accident that the BBC canceled its NAm service around the time that W
cozied up to Tony Blair.
>

Well, the small European stations are going away, but the big ones (BBC,
RN) mostly aren't. The BBC still broadcasts to Mexico in English,
probably their way of getting around the UK Govt order that they stop
beaming to the US. Only DW has totally canceled all broadcasts to the
Americas.

No problem John. In LSB, USB, and ASL and ASu you can turn it a few times
till it changes. Yes I remember that auction and wondered why no picture.

How did you pay him?
Stay in touch with Pete. He knows his stuff and can help get it back to good
condition.

Lucky

Dale,

I just bought a 8 way niCd battery charger off Ebay. I won't even recharge
the batteries in the radio. No way. My boxes are clean. I hear people have

been using regular NiMH batteries in it. They leave them in recharging continuously since they recharge more slowly. I wouldn't try it.

Lucky

No, the TS 2000 is a current model, no relation at all, and blows away the not so great R2000 in every way, except for audio quality, maybe.

In 1996,I bought a Radio Shack Pro-91 150 channel hand held scanner at the EazyPawn pawn shop across the Pearl River,East of Jackson in Pearl,Mississippi.I paid $75.00 plus Mississippi RIPP OFF! sales taxes (seven cents on the dollar) and it works just as good as brand spanking new.I have the manual for it too.I want to find out how to program it for "many other" channels,if that is possible.I also own a Radio Shack Pro-33 16 channel hand held scanner that I bought at another pawn shop.Anybody have a Radio Shack Pro-51 (I think it's Pro-51) you want to sell,does it work real good,price?

You have to remember, there was about a ten year gap from when the R7A was discontinued, until when the R8 came out, so an R9 may show up someday...

If the US government wanted to, they could cut off certain websites or audio/video feeds during and after the next crisis. In fact, they could conceivably cut the US off from the rest of the internet, or put a heavy filter on it like China does. The first thing that King Whatshisface of Nepal did after reimposing dictatorial rule was to cut off the internet feeds to his country. He also cut the phone lines. Most Americans that I've talked to agree that martial law in the US is only a terrorist attack away. In the event that happens, you will see how much the US govt can control information. No more BBC WS on XM and Sirius for David. No more foreign audio and video feeds over the internet. Most Americans get their news from TV, which already just reports the Bush Admin's talking points along with a smattering of "investigative" reports to make it appear that they're independent. In the case that the US govt really clamps down, shortwave will become really, really important. And all ebay auctions for SW radios will mysteriously be pulled. Get yours now while you still can. Americans really don't know what it's like to live under absolute military dictatorship, especially that of Bush. They'll soon find out.

It's been a long time since Thorpe came out with a new design. Thorpe
designed the Lowe HF-150 and the AOR 7030+ receivers, among others, but
these receivers have been around for quite a while now.

Does anyone know what Thorpe is doing these days, or why we haven't
seen a design from him for so long? I tried to find information about
him on the internet, but no luck.

Steve

In the US anybody can own a ham transceiver - though only ham's are
licensed to operate (or be in direct control of) the transmitter.

There is still a lot of interest in these two radio's, so my side by side
review of them is still relevant today.

If you have the R8B, then you and it deserve more than that cheap tuning knob. I sell a fantastic tuning knob that looks great on the R8B and many other receivers.

go to my web site to check it out.

http://home.comcast.net/~maghakian

73's,
Mike

Is Tecsun making this radio?  If so, it would explain why Degen is so eager
to make a similar radio (Degen 1108).

Look at eHam reviews on various MFJ products. Seems folks either love them
or hate them. I use two of their tuners, an MFJ-962D (1.5kw) manual tuner
and MFJ-994 (600w) ATU "IntelliTuner".  I like them both, and have no
complaints about their performance.

Why in the world would I repost in this group some mindless crap that you spewed over in another newsgroup? Seeing you over there did clean up one thing, though. I've wondered why you stuck around here; it's because we treat you so much better here than anyone elsewhere does.

By the way, I saw that post you made pretending you were a teenaged girl that wanted to get it on with her dogs. Shame on you. And all this time, I was only kidding about you balling Blueberry www.cattledog.com

That wasn't a dentist. And that "whatever it was" is called a gag.

Absolutely! That's why I bought a Yaesu FT-920 some years ago for TP mediumwave DXing and tropical bands reception, and found it very good for receive-only. With INRAD filters installed it was even better.

My current ICOM IC-756Pro is a great alternative to a tabletop receiver and a fine used value at their current worth of $1200-1400. The receiver is quiet, the DSP "brickwall" filters are excellent, and the useful spectrum scope is a helpful tool and fun to use. I don't care if I never use the transmitter portion... the rest of the radio is a great value for the DXer.

Richard Hillier at AOR-UK told me a couple years ago that John Thorpe had
long since moved most of his electronics design efforts into other projects,
like high-end audiophile stereo equipment.

There *was* the "JT-2000" all-DSP receiver planned at AOR, a
commercial-grade "black box" rig which John Thorpe was supposed to design.
As recently as 2004, AOR-UK claimed it was still going to happen, but I've
lost any hope in this one appearing on the market. I think a prototype was
displayed at Dayton 2000.

Will the real John Thorpe please stand up and take a bow? Your HF-series
Lowe receivers and AOR AR7030 receiver will be forever remembered and
respected in radio history.

I reckon you was there too,eh? Wasen't a U.S.Army Dentist at Fort Gordon,Georgia where I had my root canal operation in November 1962? I had to go to Saigon when I was at Shannon Wright Compound in 1964 for more dental work because of my bad teeth.Guess what? There were U.S.Army Dentist's there too.Do you think U.S.Navy and U.S.Air Force and U.S.Marines do not have their Dentist's too? There are some folks in this news group whom were in those Branches of our U.S.Military,ask them.You sure do live under a rock.

I don't know.I first heard about Nichols being in custody when I was
listening to Supertalk Mississippi last Saturday on either the top of
the hour or bottom of the hour Fox news report.   www.supertalkms.com
I was listening to Kim Komando's   www.komando.com Saturday mornings
radio talk show just like I always do on 97.3 FM on my AM/FM radio.Then
I tuned in Fox news on my tv set.

That would have been cool to see! I remember one of the days when I stopped over at the Rockwell Inventory Disposal store. They had a bunch of these frequency standard crystals (not to be confused with the crystal filters) in vacuum tube types of envelopes. I bought a few of them and gave them away as gifts to some of my friends. I've still got a couple of HC-49U crystals in glass envelopes. One of them is 3.0000000000MHz. I'll find a use for it someday.
I like those Racal receivers..........for the longest time I was looking for a 6790, and Ken Ganinno, down in St. Louis had one available. I had a KWM380 that was in pretty good condition so we made a trade, and I haven't looked back. Last time I spoke with Ken, he was pretty happy with the '380.

I'll be glad to help you anytime, John..................I have also learned
the brutal lesson in disappointment!
I will also extend this help to anybody else on the NG that has any
questions. A couple of weeks ago, I was really stuck when it came to
repairing this receiver but Tony, over at Lowe UK was super helpful for my
getting this unit up and running. Also, I have to publicly thank that great
fellow in England for scanning and sending me a copy of the service manual
for the HF-150. I couldn't have done it without either of their help.

I just got a real nice Drake R7 and was trying to learn whatever I could
about it.
I came across this post from 1999. today this package would go for abut
$1500, yet it lasted at least several days !!! I wish I had gotten this kind
of a dream deal on my R7 !!!

~~~~~~~~~~~~~~
Drake R7  Serial #00002812

Includes:

NB-7 Noise Blanker
AUX-7 Board
~~~~~~~~~~~~~~

MS-7 External Speaker
Sherwood SE-3 Mark II
Drake 4245 control knobs
Original manual and Drake box.

On 12-21-98 the radio was serviced by R.L.  Drake and underwent an alignment at a cost of $215.22.  Operationally and cosmetically this setup is a 9 out of 10.  Beautiful radio.  Too many radios and need $ for home stereo.

$850 plus shipping CONUS only.  No trades.  Serious inquires only.

Regards,

Victor Trucco
KD6PTO
Portland, Oregon

In 2000 I traded an almost new, in box Sony 2010 for a Yaesu FRG-8800. I had bought the Sony a year earlier for $200 (a BIG STRETCH in 1999). I found that the Sony didn't meet my listening needs at the time (I was into chasing pirates, which broadcast using SSB, and the 2010's lack of a tunable BFO was frustrating). So essentially I got Yaesu's best model for $200. I believe the post I saw originally asked $250 for it. I still use the Frog every day. I have a Degen 1102, but the Frog works better with poor propagation. Try getting that sort of deal today! Ebay has essentially inflated prices drastically. OTOH, you can get a Chinese portable for $50 from Liypn.

Try listening to http://www.bbc.co.uk/radio4/index.shtml?logo which
proves that quality terrestial radio is very much alive and well and
still, with no commercials.

My, that was clever. I was merely making an observation. You hate google so much.

I have a lot of SWL records and QSL's going back to 1966 (with a Hallicrafters S-120!) and want to put all of this into a logging program like I did with my amateur radio information.  I did a quick search yesterday and saw that there are a few programs that will do this and also generate reception reports.

I found one called WRLog (http://www.paraclete-is.com/) for $14.95 and a
similar one called Dxtreme Reception Log for $49.95
(http://www.dxtreme.com/). Both seem to do what I want them to do, but one
is much more expensive.

Has anyone had experience with either of these Or, is there one that is a
favorite with the folks here? It's going to take a long time to input all
the information and I want to make sure that I get the right software.
Thanks!

Rick Abshier, KF9SQ

Good morning,
a friend of mine have inserted this post on a Forum I created on my site
www.etantonio.it/en , this is the question :

"Someone knows something about LTA/WTA circuits?
I mean the best approach to the problem,
the best topology and all that can be usefull
to design an accurate and high-speed LTA?"

I don't know the answer, if you know it please post it just following this link:

http://www.etantonio.it/Forum/topic.asp?TOPIC_ID=15

Many Thanks,

Eng. Antonio D'Ottavio
etantonio@etantonio.it

TM,
 .
Many people would not think twice about spending
$1000 to $2500 every 3-5 of years for a 'new' Computer.
 .
But how many of us in the Shortwave Listening Hobby
would make the BUY Decision that easily for a 'new'
$1000 to $2500 Radio/Receiver every 3-5 of years ? ? ?
 .
it's about perceived value = time-of-use and enjoyment ~ RHF
 .
 .

Very glad that I bought mine 18 mos ago from Gigaparts - I absolutely love
this radio. Now that it is being discoed, I don't think I will ever sell it.
Replaced an FRG100 with it and am very pleased with the performance right
out of the box. IMO, best shortwave out there for its price...

Rice may offer to sell F-16s to Pakistan, India

By Anwar Iqbal

WASHINGTON, March 13: Condoleezza Rice, who begins her first South Asian tour as US secretary of state on Tuesday, may offer to sell weapons, including F-16 jet fighters, to India and Pakistan, diplomatic sources in the US capital told Dawn.

Ms Rice, who has advanced her visit to India by a day, is expected to tell the two nations that the US wants good ties with them and that is why it has come up with this proposal. She is now arriving in New Delhi on Tuesday and leaving for Islamabad on Wednesday.

Dawn reported this dramatic shift in the US policy towards the two countries on Feb 11 and on Feb 12. The Pakistan's ambassador in Washington, Jehangir Karamat, told reporters that Islamabad would not object to India buying F-16s if Islamabad was also permitted to acquire the sophisticated fighter jets.

Washington had stopped all arms sales to the two nations after they tested their nuclear devices in May 1998. Pakistan, which depended almost entirely on the US for weapons, was badly affected by this ban which did not affect India.

Since the 1960s, India had been refusing to buy US arms because of periodic sanctions that interrupted supplies, but recently New Delhi showed interest in buying F-16s from the US while soliciting bids for a purchase of 126 multi-role fighter planes - a programme estimated to be worth $7 billion to $9 billion.

This rekindled America's hopes for selling weapons to India and US officials indicated to New Delhi that they want to be one of the biggest suppliers of arms to the South Asian nation. But diplomatic sources in Washington say that the US does not want to leave Pakistan in the lurch while negotiating a deal with India and that is why it may offer to sell F-16s to the both countries.

Pakistan has been frustrated for years in its desire to buy new F-16s for its air force, which already has 32 older model F-16As and F-16Bs. The US Congress cancelled a sale of about two dozen F-16s to Pakistan in 1990 following differences over Islamabad's nuclear programme.

The first indication that the US is interested in selling the F-16 to India came in November when the State Department permitted Lockheed Martin Corp., which builds the F-16 in Fort Worth, Texas, to give India information on the plane.

Ms Rice may use her visit to tell Indian officials that an F-16 sale will be approved if India chooses the plane, diplomatic sources said. Pakistani officials hope Ms Rice will confirm approval of their request to purchase 18 new F-16Cs and F-16Ds along with "mid-life update kits" to modernize their older models.

India wants to buy only 18 planes directly from the manufacturer and plans to get the other 108 in the 126-plane package by building them in India under license. Such major arms sale to India would end US efforts to use sanctions as a means to prevent India and Pakistan from developing nuclear weapons.

India has traditionally bought most of its weaponry from Russia, and the Russian-made MiG-29M is one of the planes New Delhi is considering for the multi-role fighter deal. Other planes under consideration are Sweden's Saab Gripen and France's Dassault Mirage 2000-5.

The order taker must not have a clue.  Their wesbite is explicit:

"Availability Note:
Icom has discontinued the R75. No replacement is currently planned.
Universal Radio obtained a quantity of this model before it was
discontinued. We are pleased to be able continue to offer this
excellent radio."

If you really want to kill that mildew for good, you definitely should
put some Trisodium Phosphate (TSP) in with the bleach and water.

73,

Steve-o

My question is...the R75 seems to still be a very popular receiver. Why
would they discontinue it at this point? It's not all that old even, is

it?

Someone earlier asked about the Yaesu FRG-100...I believe that one is
discontinued as well. Passport 2005 mentions that.

There is no indication at present on the Universal site of The FRG-100 being
discontinued.

I would like to hope that Icom will announce another high performing receiver, but I think they are discontinuing it because of lack of demand.  Kenwood departed from the SWL market a decade ago after producing one of the finest receivers ever to hit the amateur market - the R5000.

If Taesu is gone (I don't know that) I guess this leaves AOR and Japan Radio as makers of high performance shortwave receivers.

www.dogpile.com   U.S.Army Dentist Tan Son Nhut Vietnam 1964
I don't know what that piece of plastic on my mouth was called.It wasen't like I was interested in finding out either,I only wanted to get my dental work done and get on out of there.When y'all go to the dentist,do y'all ask,Hey doc,what the heck is that called? what is that one? doc would give y'all some strange looks too.Those dentist folks have their dental tools/instruments they use and I don't care what they are called.I got my old house demildewed this morning and rinsed my house off with my garden hose.I got wetter than wet too.I am taking the rest of the day off from working on my house.I need to let it dry off real good anyway before I start painting on it and Dave on the JT and Dave radio talk show   www.supertalkms.com   just now said rain is predicted for today and tomorrow.   www.wapt.com  weather forecast thingy.

Yes, more blatent Davidisms. Notice he trys in vane to get you to believe that the US is actually doing this. Of course the facts state otherwise.

"India wants to buy only 18 planes directly from the manufacturer and plans to get the other 108 in the 126-plane package by building them in India under license"

And is Bush the one doing this? Of course not, Lockheed is.

dxAce: There is no indication at present on the Universal site of The
FRG-100 being discontinued.

mike0219116:  For a short time last year, Universal did have it listed
as discontinued, only to have it show back up as available a few weeks
later.

PWBR has been saying that the FRG-100 was going to be discontinued for
several years, but this years edition says it's "for real" this time.

There's usually quite a few Pro-51s on ebay for about $60. The pre 7A4 date
code models go for a bit more around 80-100.

One can really never have enough of either one!

As to ammo, I'd much rather be in a position of having to much, rather than
saying "Oh s**t, I'm out of ammo".

Actually, if it was during a root canal, it was partly that, but mostly to keep you from swallowing or choking on the bleach they use to clean out the inside of the tooth. I got a mouthful of it when the dentist tried to remove it, and had to get muscular with the clamp thing, and it shot a little of it into the back of my mouth. It burned and tasted terrible..

I reckon I will need to fire my computer back up and look on ebay for a Pro-51 then.ebay doesn't work too good with webtv anymore,too slow and sometimes freezes up or cuts off.webtv still uses the old IE 4 browser thingy.There is a new upgrade for webtv that will supposedly be available as a freebie (they are all free upgrades for webtv,I am still useing the 2.8.3 upgraded,there has been a 2.9.1 webtv upgrade available since last year) later on this year that is being beta tested right now.I hope webtv upgrades our browsers to at least IE 5 or better.I have windows XP home edition in my computer and Road Runner,computer flys on the internet.Computers are made for Broadband.

India is a good Country.There are quite a few Countries that buy F-16's
from U.S.A.and also build them in their own Countries under license.Some
of those older American Aircraft,the Manuals are worth as much or more
than the Aircraft itself.Computer compaines do not offer printed manuals
anymore because in some cases,the manuals would cost as much as the
computers.They put the manuals on CD disk's nowdays.Some of them do
anyway.A good website to check out is,   www.bootdisk.com

Which would make images from +90 MHz possible, putting you straight into
FMBCB. Signals would only need to find a way around the 30 MHz lowpass
filtering, and there you have it. Your signal levels seem to uncover the
limits of the PCB layout and grounding, pretty hardcore if you ask me.
It would be interesting to know how a '7030 behaves in that kind of
environment. BTW, what kind of FM tuner can handle that kind of "bath"?
It would take at least something along the lines of an Onkyo T-4700, I
assume.

Really...now that is a statement sounds like it is making a point when
it really isn't.  Please tell me what you are really saying.  Surely
you can't be saying that China will only change when the CCP has
completely disappeared. Surely all the change that I have read about
for the past 20+ years isn't a figment of some reporter's imagination
is it?

Semantics perhaps? ICOM may have indeed discontinued them, however, at present,
Universal Radio has not yet discontinued them as they still have them in stock.

I know if they list an item as discontinued, it causes a run on them and
they make lots of sells. I wouldn't worry about the supply of R-75s at this
time. You can still buy them and I'm sure they will be stock for longer then
you think.

Lucky

That's what I was thinking it was, although they're made out of rubber rather than plastic. And he's all worked because he hates my guts. There could be several reasons why he didn't get the joke. It may have been too subtle, it may have been written at a level beyond his comprehension, it might not have been funny and so he didn't recognize it as one, or maybe he's just plain dumb. Of course, there could be any number of other reasons as well, and a combination of any of them should be considered.

If instead you mean what makes me -think- that he didn't get the joke, I'll say the voice of experience. ;)

running dogg <run@ning.dog> wrote in news:42365d24$1_1@127.0.0.1:

I couldn't agree with you more.

The HAM rigs are also available used at HAM fests, just be one of the
first ones there. It's incredible the amount of items that are sold
before the HAM fest opens. Buy a table, as if you are going to sell, then
you get the early admission (setup time for the sellers, way before the
buyers are admitted). Usually it's only a couple of dollars more to sell

than to buy.

The Yaesu VR-5000 is a wideband receiver. Without trying to insult those in the group that have them, with wideband performance comes wideband woes. I have 2 wideband transceivers, the intermod interference is horrific. The VX-2R is great when attenuated, the VX-5R has no attenuator, beeper sounds galore.

My Picks, either through recommendation or just wishful thinking:

http://www.universal-radio.com/catalog/hamhf/3689.html Recommended. $740
http://www.universal-radio.com/catalog/hamhf/2319.html A-One Radio $575
http://www.universal-radio.com/catalog/hamhf/1897.html HF Through UHF $900 (I'd like to own one)

http://www.universal-radio.com/catalog/hamhf/0703.html Looks Nice $570
http://www.universal-radio.com/catalog/hamhf/0718.html (You R-75 Owners, take a look, $595).

http://www.universal-radio.com/catalog/hamhf/0868.html Looks nice $700
http://www.universal-radio.com/catalog/hamhf/0868.html Looks nice $915

http://www.universal-radio.com/catalog/hamhf/3595.html I'd buy one in a heart beat, I have lusted for one of these for some time, and the odd thing is that I don't know if it is any good, I need to look for reviews first. $660.
http://www.universal-radio.com/catalog/hamhf/4319.html $780

Lastly, I have the Samlex Power Supply, model 1223  13.8 Volt 20 Amps http://www.universal-radio.com/catalog/hamps/3747.html $90, you will need something like this for the above radios. Though if you don't intend to transmit, the 10 AMP supply would do (it's only $10 cheaper).

P.S. I usually buy from AES in Cleveland, http://www.aesham.com/ though there seems to be quite an assortment of retailers (such as Universal).

....new issue of the solar system passing through a more dense galactic
cloud,,,,,, It is not new news at all.I have said it in this news group
before that I read in a magazine many years ago that our solar system
passes through the "fingers" of the Van Oort Constelation and perhaps

that is the reason or part of the reason our Earth has Ice ages and then warms back up when Earth passes on through the "fingers" of the Van Oort Constelation.

A McIntosh MR78 can handle that kind of environment. One of the tests that McIntosh used to do was to inject a 12V interfering signal at a 10MHz offset to make sure that it didn't cause an increase in distortion at the frequency of the desired signal. It works very well in the Chicago area. A Luxman T-110 was also good, as was a Nakamichi Model 430 tuner. There are several good FM tuners on the market, including the Onkyo units that do the trick. The early Magnum Dynalab FM tuners that had the discrete front ends were also pretty good, but some of the models are using one of the Philips auto radio chipsets, including the RF/Mixer section.
Whereas the FRG100 had those images breaking through on some of the MW frequencies in my area, the AOR7030 didn't exhibit that characteristic. The Lowe HF-150 doesn't have this problem either; nor does the Palstar R30. The latter three units do have a 45MHz 1st I.F.
Nice work, Frank.

Pete

cuhulin@webtv.net wrote in
news:26680-4236A646-51@storefull-3255.bay.webtv.net:

Actually, I had been eyeballing those tiny TVs that Radio Shack sells, the handheld type. The prices seemed reasonable. Problem is, as you state, the transmission mode will soon be HD, and these TVs will become technological paperweights, therefore I did not purchase. I can't imagine carrying a cable TV converter size box to receive HD signals on my handheld TV.

Of the handheld TVs, as far as I know, the principle of angular diameter applies. Consider the moon and the sun. Concerning angular diameter, they (from earth), appear the same size (plus or minus a very small amount). Because of this, the moon is often able to fully eclipse the sun. Quite a nice match up, size wise.

http://www.rc-astro.com/composite/sun_moon.htm

http://www.photoastronomique.net/photo_us.php?nom=0502220003-16_16-25

Look here, the third photo set down, a comparison of the Sun, Jupiter, and the Earth, with the Earth as just a speck.

http://www.hartrao.ac.za/other/howfar/howfar.html

Obviously the Sun is massive, yet it appears to us to be the same size as the moon. Same with the Handheld TVs (no, they don't appear the same size as the moon ;-), you can have your own personal Big Screen TV for under $200. (actually the little TV, held close, giving the same angular diameter as a considerably larger TV across the room).

Look at your TV across the room, hold a ruler at arms length, place one side of the ruler on the left of the TV screen, place your thumb at the point on the ruler where the right side of the screen is. A TV the size that your ruler is indicating, held at arms length, is the same size image in your mind as the TV across the room. I'm sure that some of you have those gigantic TVs, this may be a little harder to visualize, but the principle is valid.

http://www.celestron.com/education/binbasic.htm

From what I know of optics, a 10 power (10X) binocular increases the angular diameter of the object viewed by 10 times, it does not make it appear 10 times closer (it makes it appear even closer than 10 times). The example that I read was to stand 2 feet from the wall, look at the wall, now step forward one foot. You are now at half the distance, does the wall appear twice as big? No.

But supposedly, to view the wall through a 2X binocular would make it appear closer than 2 times, as the angular diameter has been doubled. A cursory experiment with a ruler held at arms length, and the angular diameter of the laptop screen confirms this. Half the distance does not yield twice the size.

Anyway, don't trust searches on the internet, as they have simplified the concept, using the 10 times the size and 10 times closer analogy.

I digress, but it was fun.

Regards

Dr. Artaud

Same with Tad Early. He was one of the brighter lights in this group. He managed to disagree with most everything I said but hardly, if ever, called people 'tards ot insulted their portable radios. His intelligence, however twisted by the warmongers, showed.

i was talking to craig at kiwa electronics today and he couldn't believe it as he knows as a matter of his business how popular the r75 is.

i understand his reasoning but the r-75 has some nasty little warts that need work before it's a good modern rcvr, hence craig's business.

but today,  given an rf preamp chip, an analog devices adc, an fpga, a coupla ti dsp processors, a coupla voltage regulator chips, and you have a very high performance radio...ever open a ten-tec...there's nothing inside. i'm sure icom is about to come out with a very modern rcvr derived from the dsp based receivers in their new transceivers.

I fully agree Icom has something to take it's place. Perhaps a beefed up R-75 base with all the fixes plus better DSP at an affordable price. I hope they don't cut corners too much if they do come out with something new. If I didn't own a R-75, I would been buying one right away.

This may the last chance to pick a brand new communications receiver with DSP that performs so well for the money.

Sans wild brand loyalty, no one here that loves SW radio that tried a R-75 for a month would really have much to complain about and would want to keep it.

Lucky

That isn't quite right. The actual phrase is:

" If you really think about it, no 'civilization' wants any remnants of a people they just raped and decimated to 'bother' them. That's what weapons and walls are for."

I'll jump in here and say "ditto" also to the 756Pro. I love mine for trans-Pacific mediumwave and tropical bands DXing. It outclasses my highly modded R-75, which was the equivalent to a fine example of a Racal RA6790GM I owned.

The modest MW attenuation in the 756Pro can be removed fairly easily... two SMD chips need to be taken off and a jumper wire added. Email me for info if you are interested (remove the NOSPAM in my email address)  The mod made a difference to threshold level trans-Pacific stations when compared to a fully stock 756Pro.

The Yaesu FT-920 also works well for SWL/DXIng. There are some good INRAD filters that fit this model, too. However, considering the performance benefits, the 756Pro is a better value for the money.

My FM receivers seem to be OK although one of the stations has an image due to the signal strength. Both the Palstar R30 and HF-150 that I had in the past had the same FM pickup problem but it was no where near as bad as the FRG-100 and it was only on a couple of frequencies if I remember correctly. The interference could only be detected when the antenna was disconnected and one manually scanned the bands. By using the additional connector on the I put on the FRG's back panel along with some toroidal filters on the 12V power cable I've reduced it to a tolerable level that only seems to be present if the antenna is disconnected.  I also added a few additional toroids at equal places on the power cable and that helped even more because they apparently broke

the cable into smaller effective electrical lengths instead of the full
physical length, which is, by the way a half-wavelength in the lower
part of the FM band.

You've got a problem with that? You don't have a problem buying their
"aluminum telescoping poles". And later you said something about me calling
you a commie bastard if you bought one of their radios, but here in this
post...well, anyone can see for themselves what you have to say, which seems
to agree with my tongue in cheek comment. Make up your so-called mind,

cuhulin. And of course, you're not a racist are you? Why don't you call one those people a slant eyed chink to their face, and see how they react?

I know the person who made the original post.
I plan to sue. This has gone too far. I come back from a week away, and this bullshit happens.

Joking around is one thing. When it adversely affects one's relationships, both personal and professional, with the potential to cause financial loss, then the gloves are off.

I would suggest that the person who made the original post come to me FIRST to explain their actions. If not----they will be explaining it to my attorney.

Maryanne Kehoe
Atlanta, GA USA

Re: Maryanne Kehoe died

Group: rec.radio.shortwave Date: Mon, Mar 14, 2005, 3:03pm (EST+5) From:

scolettiNOSPAM@nyc.rr.com (Regnad=A0Kcin)

While there may have been a Maryanne Kehoe who has passed away, it is not the Maryanne of our hobby. Deliberate confusion is practiced on the internet by nasty individuals who use aliases, (hey wait, I'm using an alias too).

Maryanne is an avid SWL from Atlanta who contributes regularly to various online and print publications centered around Shortwave. Most notably she forwards press releases and the schedule of Voice Of Russia on a regular basis to the groups and clubs she participates in. You can find reports from her in Monitoring Times.

The immature males who can't accept a woman as a DX'er in their hobby ridicule and put her down because she can be quite obnoxious at times, is tall for a woman, horrendously top-heavy and preferred to wear crew cuts. Under that exterior, which has shed a large quantity of poundage, and added an inch or two of head hair in the last year, she has a heart of gold.

I used to rag on her until one night when a bunch of us got into a chat room and started discussing the bad things we said about her. After a few minutes of laughing it hit us that we were all being jerks and none of us have said anything derogatory about her since. Gee, I think I've done penance.

I am VERY much alive. I know the person who did this and they better come forward to me, and talk to me about why they did this, or if they don't want to talk to me, maybe they will want to talk to my attorney.

This has gone too far.

Like any attorney will spend time over some dumb Usenet post...hope you have LOTS of money and LOTS of time to pursue such a "vanity" case.

How could such a post cause you "financial loss"!?  Better have some concrete figures in hand in *real* life when you make such threats to Usenet posters.

Get real, Mary Ann - people have said a LOT worse things about *me* on Usenet (that I'm a gay prostitute with AIDS, that I live in a dirt hovel, that I've had sex with my mother, etc. etc. etc...).  Best to just ignore/laugh at such posts and move on (and like you I post under my real name, any employer/business/acquaintance can google my name and find all this stuff)..  If you are so sensitive to flames then I'd suggest you get off Usenet and stay off Usenet...or find a new alias/persona to post under.

*Now* this poster (who started the thread) knows they have gotten the "best" of you, and they may delight in making further "mischief" against you, baiting you, etc.  You fell for their troll.  Good luck in finding them!

And lastly from what I've read you apparently are no Usenet "angel" yourself .   If you didn't apparently insist on deliberately ignoring basic netiquette protocol, netcopping people so much, etc. then perhaps these "gremlins" would simply ignore you. As it is you've apparently caused a lot of rancor over the years on Usenet, so you might consider your *own* behavior. Plus which you have posted WAAAAAAY too much of your personal stuff on Usenet/the internet. It's something to consider (and I DO mean all of my comments above *sincerely* BTW, I am not flaming you).

For sure...Quite a selection to choose from also...
>
> For example, the Yaesu FT-840 transceiver. This is a fine (ahem,

According to all the people I've known that owned the 840, it is
pretty good...It always sort of reminded me of a yaesu version of
the old IC-730...Same basic look, layout...
>

>
> Oh, and by the by, some of the HAM transceivers are portable, not
quite

Yep, and even those make pretty decent "tabletop radios".
I use my IC-706mk2g as a tabletop 90% of the time,
http://www.icomamerica.com/products/amateur/706mkIIg/706mk2gphoto.asp

even though I bought it as a mobile rig...I use it everywhere..
Mobile, portable, and at home...I don't leave it in the car,
cuz I'm afraid someone will steal it...I just put it in,
if I plan on using it, or going out of town, etc..

In the house, it seems about like a tabletop, cuz it's got a
folding stand in front to raise and tilt the radio. It's not
shown in the pix, but it's a chrome metal folding stand
that is under the main portion of the radio...Makes all
the difference..."I happen to like all my radios tilting
up a bit in the front..." I keep my faceplate on the radio,
so it seems like a tabletop, just pretty small.

But get a load of this new version that is "supposed" to be
coming out.
http://www.qsl.net/ab4oj/icom/ic7000.html
It's the replacement for the 706mk2g...Looks pretty
killer, and I think will definitely give the yaesu's a run
for their money in the "mini-mobile" market.
It's the mk2g rebuilt with a dose of "pro" steroids....:)
I've had great luck with the 706mk2g, and hadn't planned on
getting rid of it anytime soon...But dunno...That IC-7000
has me drooling at the mouth...Being thats a CAD drawing,
I would expect the real thing to look even better than

that pix...500+ mem channels, Dual PBT, hi-stab xtal included,
no extra filters required due to the IF-DSP, etc, ad nausium...
Pretty slick for the small 706 package...It is obviously still
a 706 in basic design...Just pumped to the gills compared to
the original model...This would be the 4th "706" model so far
if it comes out...
I guess they consider it a totally new model, calling it the
IC-7000, but it's still basically a 706 on steroids...
As far as receivers only...It's a tuff call really...I'm sure
new models will come out, but I don't really know what to
expect, except that I expect hi-tech...Small little jobs that
go DC to light in a small package, and actually do it fairly
well. Colorful "pro type" displays, DSP of course, etc...
But overall, doesn't really matter to me, as I'll always be
buying the ham transceivers...That way, I get my moneys worth..
Do it all in one box...The 706 has been great in that regard..
MK

I wonder what what would rationalize this. In other words, what would the launch of the E1 have to do with the R8B? I guess it would make some sense to pull the R8B when the E1 is launched IF Drake were going to be selling the E1. However, I've never seen any indication on Drake's website that it will sell or even service the E1. In fact, aside from a couple of extremely vague comments here and there, I've not been able to figure out exactly what Drake has to do with the E1, period.

Either Drake hasn't really had that much to do with the E1, or it's keeping quiet about the precise nature and extent of its involvement.

Neither of these scenarios give me a good feeling about the E1.

Steve

My former neighbour has an S800... had them both here, side by side. The R8 was
clearly the superior receiver, and the 'sync' had nothing to do with it.

Problem is, that very 'modern' receiver will probably need to be modified to work properly just like everyone of their offerings over the past 20+ years.

 I heard a great political commentary from a guy on the above frequency
but only caught the last ten minutes of it.
 Who was the gentleman?  No ID as the program ran past the 2100 time
limit and was replaced by some people selling gold.

Thanks,
Mike

Sync detection is important, but it's not everything. The S800 has great sound, and yes, it has good sync detection (though there are other (recently discontinued) 'portables' with better). It's a good portable receiver housed in a grossly oversized plastic body. It will always deliver portable performance because that's what it was designed for. There's nothing wrong with that, but it's not reasonable to expect the S800 to equal an R8 in overall performance. Or look at it this way: If the S800 even came close to the R8 in overall performance, the R8 would really have to suck....which it doesn't.

Sometimes I have the feeling that we're not "allowed" to subject the S800 to the same kind of critical scrutiny that we routinely subject other receivers to, and I don't understand that. (I'm not saying that this is Jim's attitude, but it's an attitude I encounter periodically here and elsewhere.) The 800 is a good receiver. It can withstand the scrutiny well enough. We don't have to pretend that the S800 is the best receiver ever made! It's great to be 'loyal' to a particular make or model, but jeez...at some point we have to get a grip!

Steve

hjsjms@cs.com wrote:

> I asked my longtime friend and SWL mentor, A.E. Neuman what he thought and as always he said; What, me worry???
>
> I'm not worried that it's all going away tomorrow, because things won't change all that fast.  There will be plenty of stations to hear for quite a while.  But it is impossible to ignore how the shortwave broadcast industry is changing and how those changes impact the swl hobby.  The number of countries switching to more efficient ways of getting their message out to the world is steadily increasing.  We continue to read about satellite rebroadcasts and the internet replacing expensive broadcast facilities.  The number of stations listed in the frequency section of periodicals like MT is visibly smaller than it once was.  The number of companies producing and retailers selling short wave receivers is way below what it was 15 years ago.
>
> Listening to noisy, crackly shortwave broadcasts subject to the whims of propogation is fun for hobbyists, but it isn't a particularly attractive alternative to CNN, webcasting, satellite radio, cable tv, email and the internet for lots of people.  By any measure the number of alternatives to hf broadcasts continues to increase.
>
> Me, I'm going to continue to listen to the shortwave bands as I've always done.  Because I have enough portable and tabletop receivers I doubt that I will be in the market for a new unit for several years. An even when the time comes, I suspect that I will look for a good used high-end receiver since there are so many for sale. Decisions like mine combined with smaller numbers of new swl's entering the hobby means lower demand for new hardware and more companies like Drake dropping out of the market.

When I first got into SWL, back in 1986, there were few alternatives for world news. Few people had cable, and there were few channels on the cable systems that did exist. Satellites were the exclusive domain of big users like TV stations and the government. The internet was the exclusive property of a handful of computer scientists who had to be Unix "wizards" in order to navigate around.

Today, anybody can receive satellite TV and even satellite radio. Cable systems are everywhere, they have 150 channels, and they offer high speed internet access, and you can navigate the internet with a few clicks of a mouse. The internet has opened up webcasting, and web sites that anybody can find using Google. In fact, free over the air broadcasting of MW, FM, and TV is quickly being forced into obsolescence. Shortwave is also being made obsolete.

I suspect in the future that all media will be delivered via satellite and the internet. And of course you will pay for it. The demise of free over the air broadcasting is sad because a few companies and the government will be able to get rich off the media subscription fees and closely control what is broadcast, but we're all being forced in that direction by the powers that be, and soon alternatives to satellite pay for play media will disappear, leaving us all with $600/yr subscriptions to tightly controlled media. And people won't even notice that their worldview has become that much narrower. :(

This is perhaps why Universal simply lists it the way it does in the description, as as been pointed out TWICE here already today.

When it is TOTALLY discontinued by UNIVERSAL it will say so in the area at the upper left where the price is now, just like what happened yesterday with the Drake R8B.

http://www.universal-radio.com/catalog/commrxvr/0175.html

Please folks, do some reading and some logical thinking.

Very true. Time to upgrade from my DX394 it looks like. I like the looks of
that new Eton but will wait for a few reviews on it first. The R75 is in my
price range though.

If you like your S800 better than your R8, the latter is in desperate
need of repair. You can find the address of Drake's service department
on their website.

Steve

The TS-2000 is not as sensitive on VLF as my Sony ICF-2010 but I haven't opened the 2000 yet to change the BCB filter setting and even then I don't know if it'll improve.  But I'll try as soon as I get a bit more familiar with its operation, quite complex.

Yeah,we build a lot of "Mighty Fine Junk" here in Mississippi.Nuclear powered Ships and Nuclear powered Submarines for the U.S.Navy and Commercial Ships too,Nissan has a factory just North of Jackson near the I-55 Gluckstat exit between Jackson and Canton.Lockheed Martin has a factory near Meridien.The Parachutes that helped land those two vehicles on Mars were made in or near Crystal Springs.Every commercial Aircraft (and Miltary Aircraft too) has at least one or more Hydraulic Pumps,Motors,Valves in there that was manufactured right here in Jackson,I know a guy who retired from that Factory,formerly,Vickers,Vickers merged with another company not too long ago.Clothing items are made right here in Jackson by the blind folks at Mississippi Industries for the Blind.There are more factorys in Mississippi that build things for our U.S.Military and U.S.Government and Commercial Industry and every one of the Space Shuttle Engines are tested at Stennis Space Center,Mississippi before they go into Orbit.Ionatron (look it up) moved from Tucson,Arizona last year to Stennis Space Center.I could go on and on,but y'all get me driff.It sure is tough building all of those things in the swamps and fighting off the Alligators here in Mississippi,but somebody has got to do it."Mighty Fine Junk"! I have to watch Stalag 17 on tb now.

Well, you got a point, i do remenber a short novel on the nano asembler
....

not the point anyway, i think that the alternative is raising awarness
by education on the subject, getting attention to the public about
these thing,

as for china, a civilisation wich had for century exluded other, by
even bulding a wall, does not want anyone to bother them, it's another
way of thinking, literaly.

Yeah no doubt that White House, State Dept., Defense Dept., CIA, DIA at a minimum would be in on approving or advising any request from a military contractor to sell weapons to another state. On something controversial like that sale the congress was well briefed beforehand too. Contrary to the way the article was written the Secretary of State does not offer to sell those planes. It is a deal that has been drafted and blessed well beforehand. She is really just announcing it.

If you really think about it, no civilization wants anyone to 'bother' them.
That's what weapons and walls are for.

Universal seems to know ahead of time when something like this is going to
happen. They stockpiled the Drake SW2, SAT 800, and now the R75. I remember
when they closed out the SW2 for $400. That was a nice radio for the money.

Is the TS-2000 a R2000 under another tag?

*Totally* different animals...The TS-2000 is a much more modern design than the fairly old R-2000. The TS-2000 is all bands-all modes much like my IC-706mk2g. Except with more toys than the small icom. It will also cross repeat, work duplex for Sat's, etc...I wouldn't mind getting a TS-2000 as a house radio...A few friends of mine have TS-2000's...I've worked 160m, via UHF, by talking to a guys TS-2000 on UHF, thirty miles away, using my 706g, and then being repeated onto 160m. They are very versatile radios. BTW...I use my IC-706mk2g for SWL, and MW quite a bit..Also the TS-2000 is capable up to 1.2 gigs with an extra module. I think anyway....The radio is a lot of bang for the buck...Ain't no high end contest-dx rig, but I don't contest... MK

this just in from a drake group:

Greetings all-

Despite the notice on some websites, a call just now to RL Drake was met with "no decision has been made."  There was also no news of any new model in addition to, or to replace, the highly respected R8B.

What does this mean....who knows?  I guess we just "stay tuned, eh?"

This I just heard first hand, but like I said:  "who knows?"  I don't know if they would tell us now anyway or not.  What are your thoughts?

Briggs, ab2nj

WTF is going on ??? First the R8b and now the R-75. Two of the most popular and written about table tops are going up the spout. The question used to be.... "Should I get a new R-75 or a used R8b ???" Soon, the question will be... "What used table top should I get ???" Is the NRD-545 next ???

I hope ICOM makes a replacement for the R-75.

Michael

I read a post on a Yahoo! group (can't remember which one) last year sometime in which a person stated that Drake was going to pull the R8B after the E1 came to market.

In that regard, I found it amusing that Universal "discontinued" the R8B on the same day they posted a price and a specific ETA for the E1.

Unexpected Program on China�s TV: Withdrawing from CCP

HONG KONG � At 9 p.m. on March 13, �a statement to withdraw from the Chinese Communist Party (CCP)� popped up on the TV screen when Hong Kong residents were watching a Chinese satellite TV program. It lasted for about a minute. Then, the TV play was resumed. One hour later, the TV station stopped all its programs.
Mrs. Zhang, a resident of the North District of Hong Kong, called The Epoch Times and said that when she and her family were watching Jiang Su Satellite TV programs at home, the screen was paused suddenly, and then there appeared a stationary image of white characters on a red background, which was �A Statement to Withdraw from the Communist Party.� A male voice read the statement.

Mrs. Zhang said that although she couldn�t remember the details of the statement, the general idea is to tell the Chinese audience that the doomsday of the Chinese Communist Party is approaching. The party has committed tremendous sins against Gods and Buddhas. Gods want a final settlement with it. Also it said, those who joined the organizations of the CCP have been branded with the mark of the beast. They�d better withdraw quickly from its organizations so as to erase the mark. It�s better to seize this good opportunity, etc. The special broadcast went on for about 1 minute, and then programming returned to normal.

Mrs. Zhang said that from the mansion where she lives residents can receive TV programs of several provinces from Mainland China. The statement to withdraw from the CCP appeared while she and her family were watching a TV play named �Xiang Zhang Shu.� About one hour later, programming on this TV station stopped, and nothing could be seen on it any more. Mrs. Zhang thought that �probably the manager of this station is being investigated.�

When talking about �Nine Commentaries on the Chinese Communist Party,� Mrs. Zhang said that she got a newspaper edition of them on the street. She says, �The content is excellent, and it is worth reading.�

She admires those who dare to declare �the statement to withdraw from the party.� She said under the Chinese Communist Party�s pressure, those people who bravely do this action will suffer inhuman persecution should they be found out.

## Uncensored Satellite Broadcast to China Going Dark

Communist interference suspected

NEW YORK - The TV network aspiring to be �the Chinese PBS� will be unable to reach its prime audience in east Asia after satellite provider Eutelsat unaccountably stops carrying the signal this week.
New Tang Dynasty TV (NTDTV), headquartered in New York, says that the unilateral move not to continue the contract �doesn�t make any business sense,� according to Samuel Zhou, programming director for NTDTV.

�They have abundant unused capacity on their satellite,� he said. �This is a company that has never removed any channel, even those with content that incites violence and hatred.�

Heightening the suspicions of NTDTV executives is the fact that Eutelsat continues to accept payment for NTDTV coverage over Europe. Only the sensitive area of China, as well as Taiwan, southeast Asia, Japan, and Korea, are going dark.

�We learned that the true reason they aren�t continuing the broadcast is pressure exerted on them by Chinese authorities,� said Zhou.

The non-profit network has been broadcasting on four continents, via satellite and cable, since early 2002. In addition to cultural programming, such as the Chinese New Year Global Gala annual broadcast, NTDTV covers original news that makes the ruling Chinese Communist Party nervous, such as 2003�s coverage of SARS and the ongoing persecution of Christians and 100 million practitioners of Falun Gong.

NTDTV and Reporters Without Borders (RSF) will hold a press conference in

Brussels, Belgium on Tuesday to discuss more details and planned action.

Eutelsat gave no reasons to NTDTV for stopping the signal. Calls from The Epoch Times seeking comment from the Eutelsat branch office in Washington DC had not been returned at press time.

---

Media firms looking for pot of gold in Communist China:

Big Media giants such as News Corporation (Fox) and Viacom (CBS) are looking to the �1.3 billion customers� and getting �involved in joint ventures with Chinese players� (BBC), despite the continuing Communist crackdown on media content deemed �harmful.� The response from the western media corporations was summed up by this deeply disheartening line from Jeanne-Marie Gescher of CGA consultancy: �who do not care how people consume media � they just want people to consume more of it.�
...
But according to recent reports from China, the authorities have tightened controls over foreign investment in TV production joint ventures.

It has limited most foreign companies to only one joint venture and banned the involvement of any found to be "unfriendly", according to reports.

The SARFT said: "There is a very strong ideological component to production of broadcast television programmes."

It added: "China must understand the political tendencies and background of overseas partners and prevent joint ventures or cooperation from bringing harmful foreign thinking or culture into our production sector."

According to the Financial Times' China correspondent, the new rules highlight the political sensitivities that surround foreign involvement in China's media sector.

This is despite Beijing's decision to open the state-dominated sector to international investment.

http://news.bbc.co.uk/2/hi/technology/4341413.stm
http://china-e-lobby.blogspot.com/

---

It is only a matter of time before US media involved with China is pressured to portray the Chinese Communist Party in a "friendly" light back in their home audiences.  In recent history the BBC was temporarily removed from the channel line-up on cable TV systems in China because of a controversial program.

CCP pressure on foreign media has also occurred in the US book publishing industry.  Several major publishers involved with the CCP declined to accept manuscripts with anti-Communist subject matter submitted by authors.  Those authors were able to eventually publish their works with non-CCP involved publishing companies.

The propaganda wars continue...

YAWN!

If we don't sell it to them Russia or China will!

It isn't the plane it is the pilot.

The latest hardware INSIDE a US military owned and piloted F-16 is NOT available to foreign countries.

F-16 have been around for how long? 20+ years?  Not exactly cutting edge technology but still viable.

Are you kidding, Steve?  Out of all the receivers I have owned the R-4C was
"the best."
A Sherwood modified R-4C is still considered THE best "ham" SW receiver of
all time.
Even unmodified it was a treasure to many, including me.  But alas I
unwisely sold her
when the new fangled digital displays hit the scene - sigh.

Protest is not a "form of patriotism."  Protest is an act that patriots may actually do from time to time, but is not in itself patriotism.  Protest (or dissent) that is based on socialist or Marxist principles such as the ones you continually espouse against the values and freedoms of Americans is at best "kookery," and most of us see it (and you) as just that.

Not that I want to give you any ideas, but if you decided to picket a grocery store because they sell Swiss cheese and you don't like anything Swiss, you would not be a patriot.  You'd be a kook.  Understand?

Now, it is interesting that you apparently believe that you're now able to channel "the spirits of our founding fathers," and think that they would actually support your ludicrous positions.

Unless you had significant amounts of land and property, our founding fathers didn't think you should be voting.  And David, unless I'm way off in my assessment of your lowly station in life (after all, you're always wanting to help yourself to the fruits of others' labors through excessive taxation so you can be provided for through government), they were wise indeed.

> I'm curious as to what users have found when they use the general coverage in their ham transciever for SWLing and VLF.  Has anyone made any AB comparisons to their SWL gen. cov. RX?  Which ones seem to be best?  I know Kenwood and Icom make SWL receivers that look much like a transciever and might even use the same circuitry, not sure about Yaesu though.  The Icom R-75 looks a lot like the Icom 718 but the Rx has the PS built in. I can't recall the Kewood models.  How about the Kenwood TS-2000 or Icom 756 Pro for gen cov?
> tnx
>

I us my Kenwood TS-570D(G) for most of my shortwave and ham use, cost was about $800 a few years ago.  I also have a Yaesu FT-857 that was purchased with $175 rebate (final cost was $599 which included the DSP unit!). I occasionally use an ATS-909 ($249).

The Kenwood is used with an MFJ differential T tuner (MFJ-986).  And yes, the tuner helps with reception.  I have a 135 ft. dipole feed with ladderline connected to a 4:1 balun (in the tuner).
This is my favorite setup as it is easy to use and has the best performance, definately because of the antenna and tuner, but also because the radio has more "front panel" controls and audio DSP. Not as great as "real" IF stage DSP, but nice when you need it.  DSP for CW is AMAZING.  11 selectable filters from 2Khz to as tight as 50 Hz. External speaker definitely helps when in the shack. Wireless headphones let me walk around the house and into the yard, untethered.
The default BCB attenuator was jumpered out for better sensitivity (there is a small jumper on the main board, just like a small computer jumper).

The Yaesu is a great radio, 1.8Mhz - 30 Mhz, 6 meters, 2 meters and 70cm on transmit and a huge Receive range 0.1Khz to around 512Mhz (with some blank spots).
IMHO one of the best bangs for the buck.  It is  connected to about 25 feet of tiny 30 gauge wire strung out the window. No ground, no matching transformer, just connected to the center of the antenna jack.  Very good performance in this "temporary" setup! It has a terrible speaker, but I use headphone with this rig almost exclusively.  It has plenty of audio to drive an external speaker. It would be my choice if I could

only have 1 radio.  House, car, vacation, this rig gets lots of use.
Currently on my nightstand (hence the 30 gauge wire out the window).
It will evetually go into my truck for mobile operation.
The audio DSP is good for SSB and OK for CW (only 3 (?) selectable
filters on CW)

The ATS-909 is what everyone knows already.  Not very good off the whip.
A good radio with an external antenna (20 to 60 feet of wire).  I use
a 9:1 matching transformer. Eats batteries so the wallwart is always
plugged in.  This was my nightstand radio, and will be again when the
FT-857 goes mobile.  I wish the tuning knob was bigger and that the fine
tuning on ssb was displayed more accurately on the LCD, but these are
really minor gripes.  It is a good radio with many decent functions.
Speaker or headphone, it is an easy listen. FM stereo (through the
headphones) is very good.
But if I was to do it again, I would pass on the 909 and save a few more
dollars and buy the Yeasu.

None of my radios have AM sync, so I have no comment on this.
Listen to mostly AM program, SSB ham, some AM DXing & occasional CW.
Once in a while utes, but not often.

Pat in NJ

I see no reason why Icom would ax the R-75 unless they have something else to offer in the future. This is a top notch communications receiver and it's pretty cheap new. If it's totally true and the R-75 will actually be GONE soon, it's a tragedy for SWLers.

The R-75 is the perfect DX'ing receiver for the money and fills a need for us. There is a big difference in taking a $1500 radio off the market compared to a rig costing under 5 bills. It affects more people and cuts across a wider demographic.

It looks like the cheaper radio products from China are cutting into their profits and is partly to blame for all this. Plus a decline in popularity due to lowered brain activity among our populace.

Lucky

Indeed.... I cant fathom that Icom would get out of the marker all together.
The amount and type of sw broadcasters will always change, but there will
ALWAYS be a market for a capable and affordable sw table top.

Michael

HOW TO TURN $6 INTO $6,000!!!!!! READING THIS COULD CHANGE YOUR LIFE!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, Yeah right, this must be a scam,but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: what have I got to lose except 6 stamps and $6.00, right? Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it`s still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it`s still coming in rapidly. It`s certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works....Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!
Suggestion: Read this entire message carefully! (Print it out or

download it.) Follow the simple directions and watch the money come in! It`s easy. It`s legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a scam; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are followed exactly, you will receive extraordinary dividends.

PLEASE NOTE: Please follow these directions PERCISELY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it`s a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper; PLEASE PUT ME ON YOUR MAILING LIST. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

Mailing Addresses

1. P. FREY, 4577 W. PONDS CIR, LITTLETON, CO 80123
2. E. DE LEON, 14014 Rosecrest, Houston,TX 77045
3. A. Lopez, 810 Ave.J, South Houston TX 77587
4. L. Pacheco, 812 Ave.J, South Houston, TX 77587
5. K. Bat, 9335 Alcona Street, Lanham, MD 20706
6. B. Scruggins, P.O. Box 845 Port Barre, LA 70577

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All

you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws.
Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you`re in business!
---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS------------ Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select `copy` from the edit menu. This will copy the entire letter into the computer`s memory.

Step 2) Open a blank `notepad` file and place your cursor at the top of the blank page. From the `edit` menu select `paste`. This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you`ll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Just example you log on any search engine like, yahoo.com,google.com, altavista.com,excite.com then you search with this subject millionaire message board? or money making message
board? or employment message board? or money making discussions?
or money making forum? or business message board? etc. You will find thousand & thousand message board. Click one by one then you will find the option post a new message.
Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You`re done with your first one! Congratulations...THAT`S IT! All you have to do is jump to

different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**
That`s it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.
**JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet.

Remember: Play FAIRLY and HONESTLY and this will really work.

Jefferson and Madison and Franklin left thousand of pages of writing
revealing a lot about the underlying philosophy upon which this nation
was founded.  Unfortunately we live in a culture of sound bites.

I will say I know  that the USA was started to get away from the kind
of people we have running the country now. That this despotic rule is
```

largely our own fault for being mindless and cowardly couch potatoes
unwilling to find out what is really happening because it makes us
feel uncomfortable.

There's an excellent book called ''What's The Matter With Kansas?''
that is all about how you rural  folk vote against your best economic
interests because the Republicans wave cultural red flags at you.

You're out of work, but at least you don't have to watch queers
getting married.

The images looks like they were resized rather badly (at least in part) and saved as JPEG with very heavy compression. That tells more about the image editing skills of the author and potential space limits on the server than the receivers themselves. Someone who's been surfing the web for a while should be able to recognize JPEG artifacts, really.

BTW, at least now I know what this Quelle Universum labeled "Parabola 3000" (?) receiver that recently went on Ebay was - a Toshiba RT-2880.

Traitor? It's not like Lockheed is selling the F16s to Iran or NK.

Ok so the thread has changed, from Drake R-8 to R-4, speaking of
Drakes, I was wondering if the SPR-4 was better or worse reciever
than r-4? I never fooled with r-4, but have tried spr-4, my major complaint with
that it it a little too selective and audio quality lacking.

Chuck

Thanks for the background on where the Sat 800 came from and how it relates to the SW8.  If the R8B is really being killed, it doesn't leave much in the way of interesting radios for them to sell. Cable and other equipment.

I simply use a database file in an old version of Microsoft Works.  It allows me to create my own fields, sort by any field, search, etc.  It's very versatile.  I can even copy & paste loggings to a text file or anywhere else I want.  I think any database program should work well as a shortwave log.  And the best part is, if you already use the software for other purposes, you don't have to pay anything to use it as a logbook.

I took the bottom off the TS-2000 and moved the jumper from normal to DX and all AM BCB stations increased from 4 to 5 S points and the strong one went from 10/9 to 20/9.  I picked up 7 stations that I couldn't detect before but none registered on the S meter but I could hear better than 50% of the what the announcer was saying.

ace, you are a fucken moron. I'm finally putting you on ignore. I have put some people on ignore for spamming, some for racism, but I'm putting you on ignore cause you're a unpleasant human being and that's the honest to G-D truth. You are a depressed washed up person. It's so obvious you are jealous of me and you have good reason to be.

Now, I realize you have an inferiority complex. If I sounded like a teenager and was all alone all my life I'd be mad too. If you see other people happy, you can't take it. If you see someone DX a nice frequency, you can't take it and have to try and top them or belittle them.

You think you run this NG but you don't. You're basically a lazy faggot who knows how to operate one radio and this is your anchor to reality and fame. I believe you can't even afford to buy a R-75 so you'll sit with that old equipment for a very long time.

I'm shocked more people haven't put you on ignore and out of their life for good. You don't deserve to be around good cultured people. Therefore, you're off my screen and off this NG for me forever.

Enjoy your sad, lonely depressed life and remember how much better I am then you which you're fully aware of already.

Bye tard boy....

Lucky

I've already topped you some time back. Now it's your turn to catch up.

You're obviously quite delusional. Seek some help, 'tard. As far as old goes, I
recently purchased a newer vintage R8B, over $900.

Pete - I just had to respond to your comment about the FRG-100 audio mod.  This is the 3rd FRG-100 I've had and it does not have the typical "muddy" audio and it appears to be totally stock inside.  I didn't even do the mod because it sounds fine as it is. I did change the AM wiiiiide filter to a more narrow one with better skirts and so far, other than the input connector mod that's all I've "butchered" on this 100. BTW, I have an older Icom R-72 that I acquired off of Ebay and it's an excellent receiver in my estimation. No FM problems at all. Only drawback is they forgot to vent the cabinet!

Jewish extremists plot takeover of Jerusalem holy site: TV
Published: 3/16/2005

JERUSALEM - Jewish extremists are plotting to take over a disputed holy site in Jerusalem in a bid to sabotage Israel's planned withdrawal from Gaza, an Israeli television station reported Wednesday. Channel Two showed a video of the plotters, including rabbis and far-right extremists, in a meeting to discuss ways to occupy the site which is known as the Temple Mount to the Jews and the Noble Sanctuary for the Muslims. The meeting took place at a secret location inside the Old City, where the site is also located, and involved representatives from 30 groups, the television said.

"We must conquer the Temple Mount to abort the withdrawal plan. If 50,000 people go to the Temple Mount, our Father in heaven will see and the (Israeli) institutions will not be able to remain indifferent," said one participant.

The participants discussed whether to stage the
action before or after the start of the planned
pullout of Israeli troops and settlers from Gaza
that is due to be launched in July and last three to four weeks.
They are to hold a "dress rehearsal" on the Temple Mount,
or the Jerusalem mosques complex that is the third holiest
site for Muslims, in three weeks time, according to the television report.

Dozens of police reinforcements were deployed around
the compound in mid-February for fear of an attack
by Jewish extremists trying to sabotage Prime Minister
Ariel Sharon's Gaza plan.

>
> 10,000 Jews to ascend Temple Mount In April 2005
> ---> Group seeks to reclaim Israeli control of holy site
> ---------------------------------------------------------
> Posted: March 16, 2005
> 1:00 a.m. EST
> By Aaron Klein
>
> JERUSALEM -- A grassroots Jewish organization plans to bring
> 10,000 Jews next month to the heavily restricted Temple Mount
> to spark Israeli dialogue about reclaiming the holy site from its Muslim
> custodians.
>
> "The Temple Mount is the single holiest place in the world for Jews.
> It's about time the Israeli government restores it to the Jewish
> people, where it belongs," David Ha'ivri, chairman of Revava, the
> group orchestrating the gathering, told WND.
>
> The visit, scheduled for April 10, would be the largest
> Jewish presence at the Temple Mount since the ancient
> Temple period, said Haivri.
>
> The Mount is the area directly behind the Western Wall in Jerusalem.
> It is the site of Judaism's first and second temples, the primary area
> of worship for the Jewish faith and the location in which
> Gods "shekhina," or presence, is thought by Jews to reside.
> The area is about the size of 15 football stadiums.
>
> Christianity considers the area historically important.
> The book of Luke records that Jesus, raised a devout
> Jew, was dedicated in the Second Temple in accordance
> with the Laws of Moses, and describes Jesus' boyhood
> visit to the Temple, which, it is written in John, he cleansed
> at Passover and during the last week of his life. Jesus once
> referred to the Temple as his "Father's house."

> Although not mentioned by name in the Quran, the Temple Mount also is commonly identified by Muslims as the "furthermost sanctuary," the site from which Muhammad, accompanied by the angel Gabriel, made the Night Journey to the Throne of God.
>
> The Temple Mount was opened to the general public until September 2000, when the Palestinians started their intifada by throwing stones at Jewish worshipers after then-candidate for prime minister Ariel Sharon visited the area.  Following the onset of violence, the new Sharon government closed the Mount to non-Muslims, using checkpoints to control all pedestrian traffic for fear of further clashes with the Palestinians.
>
> The Temple Mount was reopened to non-Muslims in August 2003. It is still open but only Sundays through Thursdays, 7:30 a.m. to 10:00 a.m. and 12:30 p.m. to 1:30 p.m., and not on any Christian, Jewish or Muslim holidays or other days considered "sensitive" by the Waqf, the Muslim custodians of the Temple Mount.
>
> During "open" days, Jews and Christian are allowed to ascend the Mount, usually through organized tours and only if they conform first to a strict set of guidelines, which includes demands that they not pray or bring any "holy objects" to the site. Visitors are banned from entering any of the mosques without direct Waqf permission. Rules are enforced by Waqf agents, who watch tours closely and alert nearby Israeli police to any breaking of their guidelines.
>
> "The current situation is just miserable," said Haivri, whose group's stated mission is to "restore self-esteem to the state of Israel by restoring national pride and values." "The Temple Mount is the only holy place in the world, aside from Mecca, where Jews are explicitly forbidden to pray ... and here the restrictions are coming from a Jewish government." Haivri says the Sharon administration "is entirely secular. They don't have any regard for religious values. ... Our trip to the Mount will change the talk and drive home to the government that they need to reopen the area and allow Jews to pray there. ... Hopefully the trip will spark more Jews to come on a daily basis."
>
> Yisrel Meir Cohen, Revava executive director, said the group is working with the Israeli police, who control access to the Temple Mount, to keep the site accessible to Jews for longer hours on the day of the gathering, and open an additional gate to the area to accommodate the expected large rally attendance. Currently, Jews and Christians are allowed only into the Temple Mount through a small gate adjacent to the Western Wall. Cohen said he doesn't anticipate any violence at his gathering.

> "We are very aware of the sensitivities of the Temple
> Mount. This protest is completely peaceful." Shmulik Benruby,
> a spokesman for Jerusalem police, told WND, "We are still
> looking into the details of the event. We haven't made any decisions yet."
>
> Several rabbinic authorities have issued orders barring Jews
> from entering certain parts of the Temple Mount, saying the
> areas are considered too holy to visit until the third Temple
> is rebuilt upon the arrival of the Jewish messiah. Some have
> restricted the entire Mount area. Haivri stressed his visit will
> be "spiritually pure. We will not be going to the specific areas
> that most agree are religiously forbidden. We are also telling
> all participants they have to go to a mikveh (Jewish ritual
> cleansing bath) the morning of our gathering."
>
> WorldNetDaily was given a tour last month of the Temple Mount
> along with several Christian archeologists. The small group was
> warned in advance not to bring Bibles and once on the
> Mount, not to whisper or make bowing movements for fear the
> Wafq might think a non-Muslim is praying in the area.
>
> The tour guide, Nachman Kupietsky, an Orthodox Jew who
> covers his head with a baseball cap while in the area and not
> his usual yarmulke, for fear of being arrested, said, "These
> rules are very serious. They were made by the Waqf and
> agreed to by the Sharon government, which is not very
> religious and just doesn't want any more clashes on the Temple Mount."
> Kupietsky told WND of instances in the past few months
> in which members of his tour group were arrested for breaking various
> rules. He said a Jewish woman was detained last summer for putting
> her head down while sitting on a bench.
>
> "It was a hot day and she just wanted to rest for a few minutes.
> The Wafq started screaming and the police arrested her.
> She told me she was held for six hours and had to sign
> documents stating she would never again return to the Temple Mount.
> "You also can't bring anything with Hebrew letters, even secular
> Hebrew books. The Wafq confiscated many of my tour books.
> One time I brought a guy who pulled out the Hebrew edition
> of the [Jerusalem] Post, and they took that from him."
>
> Kupietsky said Orthodox guests who decide to wear
> yarmulkes are routinely delayed by Israeli police at the
> entrance to the Temple Mount for up to 30 minutes
> while they are interrogated about the purpose of their visit.
> Rabbi Yosef Elbaum, a rabbinic consultant to Revava, said
> "The Israeli government should immediately return the
> Temple Mount to the way it was. Jews must be allowed
> to go there and pray."
>

After reading some of the sites dedicated to extending the broadcast range of regional radio stations, it occurred to me that I could avoid paying the NFL for streaming broadcasts of NFL games not available in my area.

I'm particularly interested in pulling in the big Chicago AM radio station 780 WBBM. I'm a transplant Bears fan that now lives in the Tampa area.

Is it possible to get reliable reception from that distance, with say a GE AM/FM "SuperRadio" III, 7-2887? Or am I just dreaming.

Thanks,
Mark

Probably not... however, and I hate to say it, it's my understanding that WBBM
is now streaming on the internet.

LUCKY,

I have an Icom IC-R75 with the Kiwa Mods and like it very much.
 .
For the a Shortwave Receiver in the $500-$750 Price Range it
has many good features; performs really well; and is a very
good value for the Money.
 .
IMHO - If the replacement for the Icom IC-R75 is a better radio
and still priced in the $500-$750 range it should sell very well.
 .
However, if the replacement is in the $1000-$1500 range.  Then
I would have to consider a Drake or JRC as being the better
vakue for that much money.
 .

Hi there RHF

Yes, I wouldn't pay $1500 for the R75 either. The real deal is it's price/performance. After all rebates and deals I paid $425 shipped.  Plus it has DSP and twin PBT and does the best ECSS and SSB. How in the world can you beat that for a brand new radio?

I haven't done any mods yet. I might do the sync mod after the warranty is up this Oct. I spoke to a person at HRO that I know. He said nothing is up with the R8b and R75 being discontinued. He told me he has never seen even a good radio last for too long. That they change models and eventually all get discontinued.

Yes yes! I hope Icom comes out with a new higher end receiver for the same money. We deserve it darn it!

Lucky

You just gotta love Babelfish translations... I may as well have just tried to read the original Japanese.. ROFL!!!

SSR-1 ????
1975 sale XXYEN 69500
10Khz - 30MHzAM USB LSB preselector -, ??????? and 10Khz direct reading

If seventies at that time, you mentioned "????", it was the brand of yearn existence of the radio young priest. SPR-4 30 ten thousand Yen or less, digital DSR-2 115 ten thousand Yen. The ? ? ? ? ? it is high!

The ???? way the ? which is coming into view at convenient price. Although with you rejoiced, this design how the thing? Speaking well, simple, speaking badly, you cannot feel dignity.
"As for the populace being patient with this"? Is -, design eightfold state FRG-7 decisively calling. In the use report of the magazine FRG-7, the kind of air whose appraisal is high does.

Regrettable the knob of the possession machine is not original. Just a little it meaning that photograph reflection is bad, it is the schedule which future does again to take.

Thanks for the translation. I had no chance in obtaining it otherwise, as I don't even have the fonts necessary to express it for the online translation sites, let alone that the sentences are part of an image and not text available for copy to the clipboard.

Regards.

Dr. Artaud

Probally,your best bet,considering you are in Tampa and you want to pick
up WBBM Chicago,is to see if WBBM is streaming live on the internet.
www.radio-locator.com  I live 700 miles due South (South is always best)
of the windy city,the city Billy Sunday could not shut down,I had the
time,the time of my life,I danced with a woman who was not my
wife,Chicagoooooooo,that toddlin town! I can pick up Chicago pretty good
on my AM radio night times and I seem to remember I can pick up the city
of broad shoulders on my radio too.Chicago gals are easy.

@f14g2000cwb.googlegroups.com:

General interest, and not necessarily a specific response to your post.

Go to Google, enter http://www2.ocn.ne.jp/~ghq777/BCLradio.html in the search box, press search, and the result will look like this:

BCL?????? - [ Translate this page ]
???70??BCL??????! 2004/04/09 ??????.
??, ???, ? ?, ? ?, ??�??�?? ...

Well, not exactly, as the question marks are actually squares. Anyway, click on the [ Translate this page ] and viola, you at least have a chance to read some of it, as well as pages that spawn from it.

Is this one of those reverse psychology lessons? The receivers look fairly nice, at least those that I previewed.

Regards.

Dr. Artaud

I was beer (ooops,food shopping) shopping over at the wal fart store
this afternoon and I cruised by the computer magazines as usual (I
bought a PCTroubleshooting magazine,the Special Issue Spring 2005,$9.95
[[canaDUHian $12.99]]) it has a CD Ultimate PC Toolkit disk in the
plastic cover of the magazine too,and I saw some WIRED magazines,on the
cover of them WIRED magazines,it says,The Death Of Radio.Or something
like that.

Heyyyyy,Maryanne "Loafhead" Kehoe,my name is James Larry Ryan.
www.ryans.org   That name is relatively a common,ordinary name and I
have no doubt that many folks whom had the same name as I have,have
passed away too over the years.Do YOU think I want to sue anybody in
this news group or anywhere else on the internet whom might post that
James Larry Ryan is dead? I would pinch meself to see what condition my
condition is in and if I discovered I am still alive,I would sit back
and laugh my ass off! Yeah,I would laugh at you too! :{)

Probably depends on the selectivity, and if any local stations
near 780 in Fl....As a test, I tried getting it here in Houston,
"2AM", and it's coming in pretty good. *But!*, I have a local
on 790, and with normal filters, it's no good...But, I'm using
the *real* narrow AM filter, and it's quite listenable, just
real flat audio..
So it's not impossible by any means. I'd probably make a
loop, so you can have some nulling capability for unwanted
stations. The problem is not really signal, as they are strong
compared to say a ham, and that distance is nothing on 160m...
Unwanted stations will be the main problem...Also, sometimes
propagation will naturally be up and down...
BTW...I was using the ic-706 and my parallel fanned HF dipoles
as the antenna. Wasn't on the loop...So thats a good sign
sorta...Usually the wire is QRM a plenty...Multi stations
per channel usually...The loop could help the s/n a bit,
although the nulls work best on ground wave, vs sky wave..
They still help a bit on sky wave..or at least mine does..
It's a 44 inch per side diamond, and is on a rotating stand
in the room here...I have plans for a PVC version..
http://web.wt.net/~nm5k/loop5.jpg
Pretty cheap and easy to build...Can use with *any* radio,
as they don't require a direct connnection if the portable
has a ferrite antenna.
You can just place the radio near the loop.
But here, I feed with coax...
In the old days, they used to call the loops "sports
fan specials", or something along those lines, because
many people used them to listen to out of town ball
games, even 50-60 or more years ago. With a good loop,
you can listen to groundwave out to at least 200 miles

or more very reliably in the daytime. MK

If you're talking about DVD region coding, you're in error:

http://hometheaterinfo.com/dvd3.htm

Region Countries

0 No Region Coding
1 United States of America, Canada
2 Europe, including France, Greece, Turkey, Egypt, Arabia, Japan and South Africa
3 Korea, Thailand, Vietnam, Borneo and Indonesia
4 Australia and New Zealand, Mexico, the Caribbean, and South America
5 India, Africa, Russia and former USSR countries
6 Peoples Republic of China
7 Unused
8 Airlines/Cruise Ships
9 Expansion (often used as region free)

Perhaps, but in a tough situation the R7 will still outperform the R8B.

Most aficionados of SWL would (have) preferred the R-4B, and that thought has been corroborated in the hobby press for many, many years.

Indeed I am, and unfortunately for us, you're a 'tard boy.

I'm running the 8, 6, 4, 3 and 2.3 kHz filters in the one I have here at present.

I don't rely upon whether or not a receiver has 'sync' or not when evaluating it
as
a 'DX' receiver. And the S800 is *not* a comparable 'DX' receiver when compared to
the R8 series.

Get the picture?

I agree with Frank: Your top priority should be putting together some sort of outside antenna. It wouldn't need to be anything fancy. The HF-150 it works best with a modest antenna. It should be outside, though.

As for DSP, my HF-150 works very well with a ClearSpeech filter (the base unit). I pretty much always use the dsp filter when listening to SSB. I never have it on when listening to AM broadcasts, though. The HF-150's audio quality is so good that I don't want to mess with it!

Steve

5 minutes? You obviously have no clue as to how to operate a receiver.

That's unfortunate... but it's good that you've found a receiver you are capable
of operating.

Enjoy.

You'd better deal with not knowing how to operate a receiver!

I'm fairly confident that I know how to do it, and by your previous comment(s) it would
appear that you do not.

Tote it!

5 minutes?

I'm LMAO

As I stated previously, I'm happy that you've found a receiver that you're
capable of operating.

Get over it.

Yes, it is.  But selling debt to the ChiComs is even worse.

You could also try to see if you can get it on a good car radio (most OEM
```

radios have decent am's in them). Whether or not you can receive it reliably has much to do with their particular coverage...the 50 Kilowatters vary tremendously in their coverage areas. I find that "listenable" nighttime reception of 600-700 mile distant signals on decent radios is about 50/50...meaning they can vary from excellent some nights to non-existent others.

Since there are so many variables, you won't know for sure whether it is possible unless you try it for yourself over several nights. And, of course, as someone else said, you will get no listenable daytime reception at that distance.

```

I've taken some solace from having my own am transmitter (SSTran), so at least I can play my Old Time Radio shows and old music through my old am radios. It's not the thrill of long distance reception on am and sw but at least I can still enjoy the radios. I'm going to remain optimistic that good old am and sw analog radio will continue for some time to come, even if it is on the decline. Hey...with all the new, inexpensive sw radios coming out of China, at least SOMEONE has faith radio will be worthwhile for at least a bit longer.

I used to own a Cocker Spaniel dog about forty years ago.I named him Tom Dooley,after that song.Tom Dooley used to get over there on Carter Circle.I know he wasen't the kind of dog to pick any dog fights,but sometimes I would hear them dogs tying up! over there,I could tell by the sound of his voice.He would come on back home after a while.Well,Tom Dooley,did you win?

Probally a govt mil.spec antenna that didn't work out too good? I know
of a Brit site that might can shed some light on that antenna.It is a
place in UK where Military Vehicle collectors get together from all over
the World,a giant swap meet.I will try to find a link to that site later
on.

I agree, the R7, IMO, as big a pain in the ass as it is to operate, is a
whole level above the R8..

Here goes that old refrain again.(I once read somewhere) Look around in the auto junk yards in your area for Japanese auto/pickuptruck radios which date back to the 1980's.I once read somewhere on the intenet that some of those older model Japanese auto radios are good at picking up long distance AM stations.(Shortwave is the higher end of AM) Someone in this news group probally knows more than I do about that and can tell you how to properly set up older model auto radios to use in your home.

That's an unusual one.  I've seen exactly one Hitachi SW, and that was a small portable at the original EEB store in the early 1980's.

He has some interesting receivers that I've never seen but would love to own. The RF1010, and FR6600 look interesting, but are probably impossible to find outside of Japan.

The website owner does have a rare copy of the small table version of the R-300. It was a little known model that was compressed especially for for apartment owners.

Not my Sat 800 running a 50' random wire through
a 9:1 transformer.  Too much bleedover, even with the 4
bandwidth using USB sync.  The 2.3 bandwidth is too
narrow for decent fidelity for me, unless I'm actively
listening with no distractions.  If I want good enough
fidelity that the kids can dance to it, I want either 6 or
4, and 6 is hopeless and 4 is still too much.
```

> I know which method *I* prefer.   YMMV.

Ha.  I've listened to enough broadcasts to know that my S800 ain't perfect.  Oh, it gets rid of some hets and some splatter, and better than most portables and portatops, but using the advanced tools on the regular tabletop you can eliminate a heck of a lot more. After all, if what you say were completely true, then why do people pay cash for an IC-R75 or R8B or NRD-545 or 7030??  Or why are some of the Kenwoods, Icoms, JRC's and Drakes of the past so valued?

-------------

There are a fair number of stations operating on 780kHz  from Mexico and Cuba, with night-time operations that will be a problem for you, no matter what receiver you use.  Probably the worst interferer will be CKMC in Moa, Cuba with 1kW of night-time power, non-directional.

I live about 275 miles from WBBM, and their night-time signal here often has fairly weak, but audible Spanish programming under it from one or more co-channel stations.

Better than the R-5000 with the optional filters?  Just curious, since I've had some success DX-ing with the S800, but an R8B it ain't.  And yes, I can agree with the utes and ham signals, a notch would come in awfully handy to zap those pesky hets.

I enjoy my Panasonic RF-B600 too.  It get's lots of stations and is
just a lot of fun to use.  But outperform something like a Kenwood
R5000...no way.  Same goes for the 800...a nice radio (if a bit pricey)
but not in the same league.

The summary of this review is that it is a nice radio for program
listening.  And that seems to be the consensus on Eham where reviews
tend to gush more than complain.

David,

You probably think you're smart, but you just help to prove the accuracy of the Scriptures.   Check out the verse just before the one you referenced.

3 Knowing this first, that there shall come in the last days scoffers, walking after their own lusts,

4  And saying, Where is the promise of his coming? for since the fathers fell asleep, all things continue as they were from the beginning of the creation.

5  For this they willingly are ignorant of, that by the word of God the heavens were of old, and the earth standing out of the water and in the water:

6  Whereby the world that then was, being overflowed with water, perished:

7  But the heavens and the earth, which are now, by the same word are kept in store, reserved unto fire against the day of judgment and perdition of ungodly men.

8  But, beloved, be not ignorant of this one thing, that one day is with

the Lord as a thousand years, and a thousand years as one day.

9  The Lord is not slack concerning his promise, as some men count
slackness; but is longsuffering to us�ward, not willing that any should
perish, but that all should come to repentance.

10  But the day of the Lord will come as a thief in the night; in the
which the heavens shall pass away with a great noise, and the elements
shall melt with fervent heat, the earth also and the works that are
therein shall be burned up.

11  Seeing then that all these things shall be dissolved, what manner of
persons ought ye to be in all holy conversation and godliness,

12  Looking for and hasting unto the coming of the day of God, wherein
the heavens being on fire shall be dissolved, and the elements shall
melt with fervent heat?

One way to protect the front end of the R75 when using a long antenna is to use a 220uH choke from the antenna input to ground. This way, you have a DC ground path to drain off the static buildup from the antenna. You do need a good ground connected to your receiver, though.

Yeah, it seems to be a good amateur receiver, but a
general coverage shortwave receiver it ain't.

Try responding to the question with an answer rather than dodging with another question.  Again:

Really...now that is a statement sounds like it is making a point when it really isn't.  Please tell me what you are really saying.  Surely you can't be saying that China will only change when the CCP has completely disappeared. Surely all the change that I have read about for the past 20+ years isn't a figment of some reporter's imagination is it?

Are you saying that the only change that will occur in China will happen after the CCP has completely disappeared?  If so, how do you account for all of the change that has been reported in the last 20 plus years.

Or are you just trying to make a coy political statement without backing it up.....

My point, primarily, is that it is a job loss for Fort Worth, TX, more
than a technology transfer.

That's good...........it sounds like you are really in a strong signal area.
Up here at our new location, things are pretty good. I think that the worst
area in Illinois in in the Barrington area. WBBM, WMAQ, and WGN are so
strong that external mixing spur occur in rusty rain gutters, etc. I realize
that these are MW frequencies we are talking about vs. the FM band image
responses that you are dealing with. As you get higher in frequencies, those
gremlins can become harder to tame.
I've still yet to do your audio mod to my FRG100................too many
receivers. I might be picking up a
McKay-Dymek DR-33. It depends when my friend gets bored with it.

Yes, the S800 has a good sync, better than the original R8 and R8A's, but the S800 does not have the front end selectivity that an R8/R8A has.  It also doesn't have the passband offset or notch or noise blanker, and you can't turn the AGC off on an S800.

Here would be a good test:  on 5975, there's our old buddy, the BBC.  On 5980, there's RTV Marocaine (Morocco).  On the occasional days when the BBC isn't running on 5975, I can listen to Moroccan music on 5980.  However, the BBC simply overwhelms my reception of Marocaine on most days on my S800.  Can an R8/R8A/R8B pull Marocaine out? That, I don't know, but the tools to do it are there on the R8's, whereas on the S800, you're rather limited to the sync and the 6/4/2.3 bandwidths.

I have an S800, but I know it's not a DXing machine like the R8's, the R5000, JRC's and the IC-R71A are.  I was planning on getting a good old boatanchor at the Hamvention this year, but the discontinuing of the R8B and IC-R75 might have me change my mind and start scouring for a good DX-ing maching a year or two early.  The friend I sold my IC-R70 to recently offered to sell it back to me (he's had no time the past couple of years to use it), but I want to see what I can find for DX-ing that can do better than an IC-R70.

The 7030+ is a fine receiver. No doubt about it. When I was in the market for a receiver last year, I was torn between the 7030+ and the Drake. In the end I plunked for the Drake, but I continue to be interested in the 7030+, as well as one or two other receivers.

I don't plan to buy another receiver anytime soon--unless perhaps if Kneisner and Doering actually follow up on their plan to market a successor to the KWZ30. They *say* this is going to happen at some point, but they've been saying it for a long time.

Steve

Drake designed the guts of the E1, just like they did
with the S800 (which was essentially the core of the
Drake SW8 with some Lextronics/Eton modifications).

"A little rebellion now and then is a good thing."

Thomas Jefferson

Like most people, you can pick a quote from someone famous
to either refute or concur with your arguments.  Famous names
do not make an argument work; it should stand on it's own
merits.

Hello All.

An amazing date, March 15, 2005. BOTH the Drake R8B AND the ICOM IC-R75 tabletop short wave receivers discontinued on the same day!

Fortunately not only is the AOR AR7030 Plus, a far better receiver than either, not "going away," it is again being offered for sale in the US via Universal.

I would suggest, however, that if you have been contemplating purchase of this (or any tabletop) receiver, NOW is the time to buy one.

Note that many people will spend $1000 - $2500 on a computer which will "last" for only three or four years before needing replacement (and most likely will give the owner a fair amount of "grief" during that time); in that light, the purchase of an AOR AR7030 Plus receiver looks like a very wise investment indeed.

Consider it carefully and then ACT!

Best,

Joe

P.S. I am not a "conspiracy theorist," but could it be that governments don't want people to own sophisticated short wave receivers because the analog signals cannot be controlled by them?

An equivocal answer like:  "no decision has been made."  tells me their public relations rep worked previously for the White House.  At the very least the R8B is under very close scrutiny by Drake, otherwise they would killed the rumor with something like:  "The R8B remains in our current lineup".

Because Universal has made an uneqiovocal announcement it may also mean that Drake is testing the waters for untapped demand through it's dealer network.  They may be playing a game with what is a loyal if small base of customers.

And by announcing it on a dealer site, but holding back on a formal corporate announcement, R.L. Drake may also be trying to keep the sales price as high as possible on a product that they have decided to discontinue.  Generate some additional sales by hinting at a discontinuance while also minimizing fire sale prices.  They may have a lot of 'em sitting in the warehouse.

And it could be just abysmal communications between Drake and one of it's bigger dealers...unlikely, but possible.

Good points, but is our world view that much broader by listening to broadcasts on H.F. from the overseas equivalents of the VOA than it is by listening to news feeds and programming from DW, Al Jazeera, BBC, China Int'l, etc., over cable TV, satellite radio, etc.

There is spin and censorship involved no matter which medium you choose to get your news and other programing on.

I remember a fellow down in I think, Arizona had a similar setup like that
for sale, but he wanted more like 950 dollars. I took a pass on it. I agree
with you............to me, the 515 is the coolest looking receiver that JRC
ever made.

It is also a very good time to pick up one of the several high quality
tabletop receivers that have been pulled from the market in the last 15
years.  A used Kenwood, Icom, Yaesu or Japan Radio receiver can also
provide a lot of value for the price.

Lockheed (Lockheed Martin) won the bid for building the new Air Force One Helicopters and of course there will be backup Air Force One Helicopters too.Don't you worry about Fort Worth,Great Republic of Texas,Fort Worth,Great Republic of Texas is doing very well for it's self.And that also means more jobs over here for Mississippians who will be building parts for the new Air Force One Helicopters and more jobs for folks in other States too.Hey,do a www.dogpile.com for,Mississippi Aircraft Production
We build Aircraft parts over here too.Hey again,the Stetson Hat was invented by John Stetson right here in Mississippi.I don't wear a hat unless it is raining hard enough outside and then I put on my old beat up raggity Pith Helmet Hat because it serves as a mini umbrella for me,keeps the rain off of my spectacles and it is raining here right now.I think I will buy myself a brand spanking new Stetson Hat and some Cowboy clothes too.There are stores here in Jackson that sell those clothing articles.After all,the Great Republic of Texas is a sister to Mississippi.Here is how Cowboys and Cowgirls got their names.Wayyyyy back many,many years in New England,those mamas would holler out to those youngans,y'all! go round up the cow(s) and bring em in for milking or I am going to get me a switch and wear y'all out! Cowboys and Cowgirls actually came from New England first,in America,they did.Moving West,they helped drive those Cattle West.It Happened Like That,Moving West!

Gee I'm pretty surprised Ace. I would figured you of all people would love it for it's DXing performance. I will admit it takes a little getting used to before you cozy up to it. But once you realize what you can do with it, you'll be happy. You can't just try it for 5 min. You have to experience conditions where it shows you how well it brings signals in this cruel world.

I simply use a database file in an old version of Microsoft Works.  It allows me to create my own fields, sort by any field, search, etc.  It's very versatile.  I can even copy & paste loggings to a text file or anywhere else I want.  I think any database program should work well as a shortwave log.  And the best part is, if you already use the software for other purposes, you don't have to pay anything to use it as a logbook.

Henry Ford had factories all over the World about nienty years ago.That was not a job loss for any Americans.I have many,many stacks of books here about antique automobiles and the history of automobiles.One of my Ford books dates back to around nienty years ago and the book has many articles and pictures of Ford factories all over the World way back then.Lest you want to call me a liar,you come see for yourself.

Yes, a good condition Kenwood R-5000 has to be one of the best older radios
I ever used. It's so sensitive and with it's dual VFOs and excellent notch,
one of the best buys of an older rig.

Got my 8 way battery charger yesterday. Does NiCDs in 5 hours, NiMH in 8.
There is no way I'll recharge and keep batteries in my 150 for a long
period. I'm too protective of it.

Tried it out here with the fellow who owned it side by side with the other
Drakes for about 5-6 hours.

Bottom line: the individual sold the R75 and bought an R8B.

Now, if I figured I'd be getting a better bang for my buck I'd have sold my
Drake's and purchased four (4) R75's... but I didn't...

I would agree, the R-5000 is a very good radio.

That was the one I was thinking of, although I wanted to give equal
time to the others 'cause they are all fine units.  Not only does the
R5000 have a good selection of very useful controls, but the quality of
it's audio is somewhat clearer (imho) than comparable receivers from
Icom or Japan Radio.  I've found that edge of clarity helps with
certain weak stations.

I am pretty durn sure (knowing Mississippians like I do because I live here) most of the folks who work at the Lockheed Martin factory over there near Meridien are Republicans and they Hate those klintoons and democraps and libs with a pink purple pasion just like I do.There is a small city of about twenty something thousand population five miles due West of my doggys couch and the name of that city is Clinton and has been Clinton every since that city was founded.Most of those folks over there in Clinton,Mississippi are Republicans too.y'all Telescope folks out there,my Popular Science magazine for April 2005 showed up in my snail mail box this morning.On the front page it says,10 Telescopes That Will Rock Your Universe.The article begins on page 72 in my Popular Science magazine for April 2005.

I hate to be very cruel, but so be it. You haven't even cozied up to the R75 well enough yet to even be able to 'zero-beat' a signal so as to properly report its frequency.

I'm not sure if that's a fault on your part, or on the part of the R75, but I'm fairly certain that after some period of time you'll be able to master its quirks.

Not sure I understand which radios are copies of Drakes....

I've heard that about the quality many of the later Satellit radios.
The Grundig name to me is associated with mellow sounding luggable
radios having lots of controls and several analog dials.  As I remember
the later digital models always seemed to always have some sort of
issue with either audio quality, the synch detector or memory controls
that took some of the edge from a premium priced receiver.  The last
one I played with was the Satellit 700 and found it completely
un-intuitve to use.  I gave up waiting for it's successor because
Grundig USA seemed to lurch from one postponment to another.

I understand the Chinese badged version of the latest Satellit can be
had for $300.00 - is that possible?  I have no idea what the Satellit
badged version sells for.

No, it's simply a so-so radio... with all the faults one has come to expect in an
ICOM SWL receiver.

The R-4B with a bunch of extra crystals or coupled with the FS-4 synthesizer was
much better for SW dx'ing.

The R-4C was indeed (and may still be) a better ham radio receiver.

$449 (+S/H) from Universal, or a reconditioned one (courtesy of Drake) for $399 from Universal.  What Lextronics (which became Eton, I believe) did was to go to Drake, purchase the rights to use the guts of the Drake SW8 in the Satellit 800, then Lextronics did some work to add in FM BCB, their own audio, and a few other tweaks.  Then Lextronics licensed Tecsun to build them.  That's the (extremely) short summary of how the Sat 800 came to be.

As I like to put it, where the radio works, you can thank Drake, and where it doesn't you can thank Lextronics/Eton.  The SW8 is a nice portatop, and while the Sat 800 has nicer sound, the SW8 had some intangibles with it to make it more useful (solid construction vs. Chinese QA/QC problems, and more birdies in the Sat 800 than in the SW8, to name two).  However, the SW8 was a couple hundred dollars more than the Sat 800, and if you got a good model or a reconditioned one, it was (and is still) a good value.

I hate to be mean, but here is an example of how not to do a radio web
site. it is full of the worst samples of receivers that I have ever
seen. many of the receivers look like they came from a burnt down house

Hiya, Mark...

I'm in New Jersey, and I can hear WBBM on my GE-SR III.  I'm listening to it right now, as a matter of fact. I tuned in to see if I can hear it tonight. For the moment, it is audible, but there is QRM from stations close to me. I can now hear it much better  because I just switched to my Sony 7600gr.  I can take advantage of its ssb selectable am sync.  It is a huge help for MW DXing.  Currently, they are playing a radio commercial for a place called "Napoleon Taylor".  So... Yes... I can hear it, but, the problem is, the signal is going to fade at times to the point where wont hear anything. Also... From my experience with DX'ing the big 50 kilowatt AM stations, you can hear them at night, and not nearly so good if at all during the day.  I love football myself, so I know that the games are on during the day, when it is hard to hear far away stations.  Also... You are down in FL.  Even though there is no local clear channel stations in FL @ 780 to squash WBBM, you have a lot more distance from the WBBM transmitter then I do.  Distance attenuates signal.  In short, even if the signal does make it down there, you still cant listen to it practically speaking.  If I tried to listen to a Monday night game from here on WBBM it would be like... "Fourth down and goal... One second left in the game... The Bears need a TD here to win it....  They line up... Signals being called... Here is the snap and.............. SSSSSSSSS...SSSSSS......Crackle... SSSSSSSSSSSS....

That is the best you could hope for.  Just bits and pieces of audible but messy sounding audio followed by long periods of just static....

Hope that helps !!!!

Michael

There was an after-market third-party variable crystal occilater you could
buy
or build that gave the R-4C General Coverage.  It was published in QST I
beleive.
I built one and my R-4C  performed excellently as a SWL receiver.
Too bad you missed out.

I am picking up WGN Chicago pretty right now on one of my old off the wall no name brand AM/FM/Shortwave radios I bought for about two or three dollars at a Goodwill thriftstore about six years ago.It is kind of staticky right now but it will get better later on in the evening.I just now picked up WSB 750 Atlanta while I am looking for WBBM.I just now heard a guy mention O'Hare Airport and then he said 780 WBBM Chicago.It is kind of staticky too with fadeing in out,it should get better later on tonight.Only the antenna that was put in the radio at the factory is the antenna this radio is useing.Hey,lay off them ccrane radios,they aren't worth a crap! I know that to be True.

I know...they repair S800s and for a time you could order 800s directly
off the Drake site. What's odd is that they're nopt doing anything
comparable for the E1. There's at most a passing mention of the E1 on
the Drake site. Why the disparity, I wonder?

Steve

Not only the R75 and the other major shortwave reciever are
discontinured, but according to this website I found, ham radio has also
been discontinued and extinct for years?

Then I wonder what I'm hearing on the frequencies formerly used by ham
radio operators?

hmmm... It must be signals from the past.  LOL

The guy that wrote this website is serious.
He wrote

"How they do it in Frequency, they use a very particular radio system
called HAM Radio. It is an old system not in use today and there would
be little interest in using it today since nobody is using it anymore.
On top of this, you need a license to operate one."

You seem to be adept at avoiding uncomfortable questions by answering
them with questions.  Is it possible that you really don't know the
answer?  Please think the question over and try responding tomorrow.

"IMHO - If the replacement for the Icom IC-R75 is a better radio
and still priced in the $500-$750 range it should sell very well. "

Do you know is there a replacement for the R75?

You have to realise that the person threatening to sue apparently has NO LIFE...this person just likes to blow up small silly incidents (in this case a "your mommy wore army boots!" post on an obscure Usenet group) so as to draw attention to themselves...pathetic!

ObSW:  Hello Arnie Coro! :-)

jmg:
Those DSP devices can be expensive.  That display is expensive.  The main
reason Ten-Tec was able to sell the RX-320 for $300 was because they didn't
have to supply a display or the the controller to run that display.  That's
typically about 60% or more of a receiver's cost.

The R75 doesn't have DSP, it's a completely analog receiver. You can buy an optional AUDIO dsp unit for the R75. You can buy an audio dsp add-on for ANY shortwave radio. I use one with all my receivers.

I too just bought a HF-150 and I am happy with the performance. I guess I got lucky with my purchase as the radio seems to be in really good shape (I'm the lucky guy who bought the set with the speakers:).

Scanning the different stations using the tuning knob seems to take quite a while (I'm impatient), so I ordered one of those wireless remotes that can have a variable tuning rate. They say that you can also access the memories with the remote which the keypad can't do.

You might consider one of those as a nice accessory if your radio didn't come with a keypad. I don't know how well they work, though. I haven't gotten mine yet to try it out.

Good luck with your restoration.

Albert.

> Yes, a good condition Kenwood R-5000 has to be one of the best older radios I ever used. It's so sensitive and with it's dual VFOs and excellent notch, one of the best buys of an older rig.
>
> Lucky

I got a chance to use my friends R-5000 for a few weeks.  We swaped radios and he got my R-75.  I really liked the R-5000 a lot. The audio was fantastic and the features were great.   I also apprecieated the dual VFOs and notch too.  I'd love to have one.  My fried that I swaped with liked my R-75 and wound up buying a used one for himself.  He didnt do any mods to it.  He uses it strictly as a ssb receiver for utility, ham and ecss dx'ing.

Just recently, I wound up doing another swap with another friend.  This time, I got to use the NRD-545.  I absolutely loved the way it looked and the DSP did some nice things, but I didnt fall in love with it because the audio was poor. I found it to be tinny and weak. I had posted on this ng a few months ago asking for info on the NRD-545 because I was thinking about buying one, and one of the things I was advised about was that the audio wasn't so good. Is that ever the truth. I'm not saying that it is a bad radio at all, I'm just saying that it should be better for all that money !!! The R-5000 audio is remarkably better then that of the NRD-545. I'd say that the R-5000 audio sounded almost as good as the R8.

Probably. That might protect Drake in case the E1 turns out to be
plagued by problems. In fact, Drake may be more cautious now, following
the difficult launch of the S800.

Steve

I am new to the shortwave hobby and I just got a HF-150.  Would it be worthwhile to get a DSP filter, like the Timewave DSP-599zx?  The radio works very well with one of those portable reel antennas clipped on to the whip antenna.  The radio doesn't seem to be suffering from any overload so I don't think that I need a preselector; I live in a small town that is quite a distance from any transmitters.

Albert.

For those interested, I noticed a Drake R7 for sale on eBay.
It was already up to over $700 when I noticed it....

I don't think it is a turnstile. The element configuration looks like an
attempt to broadband it by making it larger in diameter. The label says "HF
active antenna". Looks military. Probably a military portable unit.

Try living in North Korea for a few hours- you won't be making fun of
government conspiracies for long. One of the "conspiracies" does involve the
ownership of even your basic BCB radio. It could happen closer to home as

well.
Brian

just got an R7 and installed AUX-7 programming board with direct access to 8
SWBC bands (I consider this a must to avoid tuning fustration). I really
like this receiver and so does Ranier Lichte.

Drakes second best desktop receiver (R8B is first)

I had an HF-150 a few years ago and tried a DSP unit with it. I hardly
used the DSP to be honest with you and eventually sold it.  I would
spend some time and try to get an outside antenna up fed with coax and
a matching transformer. This will make a big difference over the reel
antenna. Despite its size and simplicity the 150 is an excellent radio.

the satellit 800 kills most of them. it has been my desktop receiver for a
couple of years now. that selectable sync puts it way over the top of any
receiver Kenwood or Yaesu ever made. and I have had EVERY Kenwood and Yaesu
HF receiver made in the past 25 years. they were pretty useless compared to
the 800. you have to spend a lot of money to beat the 800 for SWBC DX (don't
get it for utes, get an R75)

I thought of that possibility but the thing is only 7 foot long. Making
it a few inches wider at that length would not do much in the way of
making it broadband.

I've never seen that configuration in an antenna before.. the thing looks most to me like an element from an electric furnace.. (that's only what it looks like.. I can see from the label it's an antenna)

```

The answer to which region is the U.S. is

The U.S is region 2 only and Europe is region 1 only.

Those are the official regions assigned to the U.S. and Europe.

```

You sir, really wish that you were the guy who SOLD this radio
to some *schmuck* on e-Bay for $560.05 !!

Don't knock em....JOIN EM!!

I have junk in my garage boxed up from hamfests that I
bought for pennies-on-the-dollar over 25+ years ago.

Today I have sold approx 35% of this "ham junk inventory"
for almost a 700% clear profit over what I've paid for it
and I still have 65% of stuff I ain't even un-boxed and listed yet
in the loft of the garage !

I say, if the "market" wants to pay that kind of money
for useless crap, then I am VERY HAPPY to oblige
them.  : )   : )   : )

(plus I tack on an extra $15 per package for S&H over
the actual ship cost...and guess what...no a single complaint!)

---->     I PHUCKING   L O V E    E-BAY !!!!!!

IT IS THE BEST THING THAT EVER HAPPENED TO HAM RADIO SELLERS.

The 'tards are either in 'shock' over someone paying what they perceive to be a
fair price
or they will try to insinuate that sales like that are some type of sham where the
goods
never trade hands.

This is the best entertaiment I've ever had in my life.

Absolutely boggling.

Hi Steve

Yes the audio quality on the 150 is just too good to adulterate with
anything except when absolutely needed.

Hey, I almost bought a Lowe HF-225 last night for $240 but the seller was in
the UK. Shipping would have been 35GBP or like $70 so I turned it down.
Plus, I hate thinking how the radio would be bounced around all the way from
the UK.

Lucky

Pastor Peter J. Peters is on 12.160 right now (12:00 EST / 17:00 UTC) teaching on A Biblical Look at the Farm Problem.

It will repeat at 10:00 PM EST / 03:00 UTC on 5070.   He'll also be on one hour before this, but it will be a different message and he may be on "live" the first hour.

He can also be heard on the net at http://www.scripturesforamerica.org and click on live streaming.

The message will also be archived at the above url.

Oh, he's also on satellite on Telstar 5 - audio/radio only.

When dvdguy talks about _anything_ he's in error.

I just wanted to publicly thank Lucky, Steve, Dale and most especially Pete, KE9OA who offered to help me when I thought I had a serious set of issues with my radio.  Turned out that, despite what the manual might indicate, I need to power my radio with a 500mAh power supply as opposed to the 300mAh I was using.  Once properly powered the radio works wonderfully.  Anyway, my point is that, despite the off topic and often incoherent ramblings on this newsgroup, there are knowledgeable, intelligent people willing to help when asked.

Thank you all again.

John, KB2COP

I'm sorry Mike, but if you have the audacity to acknowlegde even the
bare, logical possibility that the S800 has even a single weakness or
shortcoming, I'm afraid it's time for you to go. Come back after you
'get your mind right'.

Steve

Probably ought to call or email him at Louisville Tech. But, I sure don't wish
to be accused of 'stalking' him, so I'll leave it to someone else.

```

I'm speechless.

I'm afraid to leave my house for fear that I'll be kidnapped, held
against my will in a cheap hotel and deprived of sleep until I've been
'programmed' to appreciate the merits of the 800!

Any day now I just know that someone's going to argue that the Grundig
Mini World 100 PE (perhaps suitably modified) is superior overall to
the AOR 7030+. It's just a matter of time.

Steve

Will he be sent to an 'S800 re-education camp'?

Just received the IBA A-05 schedule,
which still shows several English
broadcasts as well as other languages,
but the spreadsheet is missing the
times, just the languages and
frequencies. It does state:

``According to IBA request all
broadcast cease at 30.06.05 meaning NO

shortwave``

So we shall have Israel on shortwave
for at least another three months!

73, Glenn Hauser
(via dxld yahoo group)

Hold on, lemme go get my 100PE that's upstairs....

::returns::

::tries radio::

Wow!!  Did you know you could get Rush on shortwave??
Oh, wait, that's AM BCB....  Nevermind.

I guess that the 100PE isn't as good as a 7030+.  I'll report
for deprogramming tomorrow.

A bus will pick you up in the morning. When the driver and his
attendants enter your home, please just follow their instructions. Do
not bring a radio. An S800 will be provided for you at the camp.

Steve

Nothing beats a tube radio for long distance medium wave reception.

Can't we all just get along???

Seriously though...some people are collectors. I didn't look too closely at that auction, but it appeared that the receiver in question was in good condition, so that price doesn't seem too outrageous for an Icom.

An R390 or 390A is superior to any sandbox.  Your average 5 tube
superhet from the early 60s is superior to 99.99% of the transistor
radios around today.

Golly gee -- my take on all this

1. Why would you be concerned as to how folks spend their money ?
2. An auction is just that -- folks bid what they think it is worth (right or wrong, dumb or shrewd)
3. There are lots of megabuck buyers out there. Money is no object.
4. Collectors live in a different world than you or I.
5. You really don't want price fixing do you ?
6. Free enterprise is a wonderful thing - think about it.
7. Caveat Emptor sez Caveat Lector

I bid, therefore I am

Not sure, but it may be.  However, since you can connect to the web I
expect you can install from the web.  You can probably also install
directly from a hard drive.

It's a powerful little radio with lots of features.  With the digital
interface you can choose from several different sources and can even
download a manual to help you write your own interface to it.

Could be. Car radios can often be quite good as far as reception, but I
wonder if that is due to the fact you are driving outside, without
buildings and other structures in the way. My 2004 Chrysler's stock
radio gets excellent reception on AM in the evening. Here in Wisconsin
I can pick up the big AM stations from Minneapolis, St. Louis, Dallas,
Atlanta, New York, Ontario, and so forth.

Ah So ! - To DaviD the Self-Identified ELITIST
-aka- Political Cadre of the Democrat Party of the USA.

.
To DaviD and All ELITIST :
Who Are All Knowing and Understanding.
Who Are All Feeling and Caring.
Who Are All Liberal and Enlightened.
A 'hayseed' is One-of-Those "People"
that 'you' are SOoooo Much Better Than !
.
All the-little-people that 'you' must Lead and Take Control of
because 'you' Know what is Right for them; and after all it is
'your' Right and Duty to Lead; because 'you' are the "Chosen Ones".
[ The Political Cadre of the Democrat Party of the USA. ]
.
Even when you are 'wrong' you can be "Wronger"
and when you are Wronger; you become the WRONGEST !
.

Today, our household mourns the loss of Andre Norton.

Most people who know of Andre know her as a prolific writer of science fiction and science fantasy books.  Pat and I know her as a friend, a wonderful, giving person who was well worth knowing.

I personally have known Andre for only the past two years, having met her and her beloved family of cats on our last trip to the US on vacation.  Pat, however, has known her for decades and held her as a close friend and confidant over the past 20+ years. Her passing is hitting Pat very hard, even though we've been following Andre's decline through her most recent illnesses. She will be missed.

Andre Norton. Author, artist, friend, confidant, philanthropist, was 93.

Rest in peace, kind lady.

What setup?  You just grab one of the freeware control programs off of
the net, install, hookup the serial cable and start listening.

If your interested I have a 320 (NOT "D") that I would be willing to
part with.  Email me off list if you're interested.

>
> Well, folks, you may want to blame me for this.  I did my part to help Winn-Dixie go bankrupt.  I stayed away from their store no matter how good the "deals" were.
>
> Why?  Do you recall about eight or ten years ago, perhaps longer, when a LADY in Atlanta, GA (?) slapped her child (about 10 years old) in a Winn-Dixie store because of misbehaving in the store and picking at a sibling?  (I believe it was a little boy picking at his younger sister, but don't recall for sure.) Anyway, some "nice" clerk (or the cops) was kind enough to wait until after she had PAID for her groceries before having her arrested - and hauling her off to jail!  (Imagine the "power" they felt and/or gained out of this.  The d**n "Bible-Thumping" (probably) mother goes to jail.  "Yip, got ONE of them off the streets!" DSS probably got the children, at least for a few hours, and probably got more money from the government for it, and the four ton cops got chance to feel real tough beating up on a little old lady! WOW!)
>
> "Yep, spend yo' money wif us so we can monitor yo' principles and git you arrested!  We's don't read that thar B-i-b-l-e nor follow what it says!  We's watches "cops" on tv, knows all about 9-1-1, loves yo' money and believes all what Doc Spock writted!  We's calls 911 in a flash (probably programmed into the speed dialing system) when we sees anyone what might act like theys wants to use the rod and train a child!  Wes caint have no dis', dis', oh yeah, DISAPPLINED child in our store cuz da might make good citizens and stay out of trouble and da system won't make no money on bee-having chilluns -- less'on wes catchs them following dat ol' black book!"
>
> I called several of the Winn-Dixie stores, spoke with a manager and tried to get them to say that it was not official company policy to interfere with a parent correcting a child.  NONE of them would make such a statement!  I promised them I'd not be back until I read they'd changed policy.
>
> May Winn-Dixie go the way of most of America's industry.  Please, help send them overseas some place.  Send them to China.  Maybe China can rework the program, using slave labor and sell it back to us cheaper

> !You are crazy,and really have no clue about Winn Dixie,It's a great supermarket and to have someone of your caliber degrade it is ridiculous.I hope no one actually believe's your lies.I been shopping at Winn Dixie for 20 year's or better and it's a shame to see pampus idiots like you try to degrade it.It's a shame people are letting the like's of Walmart ruin a great grocery chain in rural area's.For long you will have no other option's to buy your groceries but from Walmart.Once they own the market in your area ,they will raise the price's.Nothing you can do about it then b/c there the only grocery store left/retail!

For One and All,
=2E
Eton Elite "Series" Radio News and Updates :

=2E

Eton Elite "E1" AM/FM Shortwave Receiver with XM Satellite Radio
E1XM =3D> http://tinyurl.com/4t9qz
Features & Specifications =3D> http://tinyurl.com/6zx6o

The Eton Elite "E1" AM/FM Shortwave Receiver with XM Satellite Radio is the world's first Radio to combine AM, FM, Shortwave Receiver, and XM Satellite Radio into one Ultra-High-Performance Unit. The finest 'portable' in the World, the E1 offers Powerful Reception through its Digitally Synthesized PLL Tuner with Synchronous Detector, Passband Tuning with Selectable Bandwidth Filters and Single Sideband (SSB). Offering Rich Sound, the latest in Radio Technology, 1700 Station Presets, and Memory Scan Function, the E1XM Radio is designed without compromise, giving you direct access to News, Sports, and Music from Around-the-World.

=2E

Eton Elite "E10" AM/FM Shortwave Radio
E10 VIDEO =3D> http://tinyurl.com/7y6xd
Features & Specifications =3D> http://tinyurl.com/4bo9b

Now, intelligence meets performance in the Eton Elite E10 'portable' AM/FM Shortwave Radio E10. With 550 Programmable Memories, Manual and Auto-Scan, Precision Tuning, and Alarm Clock features, the E10 Radio provides the sophisticated tools for listening in on News, Sports, and Music from around the world. The E10 Radio even allows internal recharging of its included Ni-MH Batteries, the Charger is included. With excellent AM, FM, and Shortwave Reception, plus Intermediate Frequency (IF) Shift and Shortwave Antenna Trimmer the E10 Radio gives you the performance you want with Digital Ease.

=2E

Eton Elite "E100" AM/FM Shortwave Radio
E100 VIDEO =3D> http://tinyurl.com/3lngs
Features & Specifications =3D> http://tinyurl.com/5pueh

The Eton Elite E100 'pocket' AM/FM Shortwave Radio fits full-sized features into your palm or pocket. This little marvel is packed with all the latest Radio features you want: Digital Tuning, 200 Programmable Memories, Digital Clock and Alarm, plus AM/FM and Shortwave Radio Reception. And it's small enough to fit in your Coat Pocket !

Good Lord!!  Now that's a collection.  I'm reminded of
a quip I once used (stole it from a coworker) when my
cubicle had three SGI workstations in it:  it's not just
a job, it's a CAT scan.

So you're the guy who stuck the Alpine coax speaker
in their Sat 800?  I've thought about doing that for some
time now, but every time I also figure that I could just
as easily hook up an external speaker to it.  How's the
sonic difference?

They should have had the cops do the arrest before they checked her out. You know the cops weren't going to wait for the woman to bring the groceries home, or even to secure them in any way, and neither was W/D. That left the woman in the situation where whatever wasn't stolen was thawed and unusable.

And if this was truly something abusive, they should have gotten her arrested without giving her a long, leisurely shopping period during which she could have rendered more abuse.

Right off the bat I can say what beats it: a tube radio hooked to a
really long, really high antenna.

I notice on this website that he's very big on PETA, and preaches that we must show great respect towards the animal kingdom.

Since Dr. Scott had a sucessor ready to take over, I will now abandon my theory that the Rev. Scott's sudden passing had panicked Icom and Drake into abandoning Shortwave radio. Apparently it was something else which panicked them. Something certainly did...

The real estate could be used for many things besides a resort.
In the Caribbean, due to the limited amount of land -- land costs will
always be higher.

Not all resorts have to be on the beach, in Fiji many are not.

If a multinational company is interested, a higher price may occur during
the land sale.
